PET BASIC BREAKTHROUGH

Softside Software

presents

SYMBOLIC/STRUCTURED BASIC

At last, **Symbolic/Structured Basic** is available for your PET 8-32K personal computer! S-Basic is a pre-compiler that enhances the PET's built-in basic monitor with the addition of extra-control statements found only in the most sophisticated computers. **WHILE ... GOSUB ...** calls a subroutine as long as a condition is true. **UNTIL ... GOSUB ...** jumps to a subroutine unless the condition is true. The **IF ... Then ... ELSE** statement allows the programmer to command the computer to execute instructions if the normal IF condition is not met.

Forget about line numbers, S-Basic allows you to program naturally only naming (numerically or alphabetically!) statements that you will need to refer to, for ex-

ample: LOOP/PRINT "HI": GO TO LOOP. S-Basic program **lines can be up to 255 characters long**, two-and-one-half times as long as on standard Basic. S-Basic does not compromise any of PET Basic's existing features. All PET Basic commands can be used.

S-Basic includes an **editor** with full text capabilities, a **translator/pre-compiler** with its own error messages, and the **S-Basic loader**. These programs are recommended for disk-based PETs. A printer is optional but suggested. Cassette copies are available and require two cassette drives. Comprehensive instructions are included. Symbolic-/Structured Basic package is available complete for an **introductory price of \$35.95**.

PERFECT AIM

ATTRACTIVE FUNCTIONAL PACKAGING FOR YOUR AIM-65 MICROCOMPUTER

- Professional Appearance
- Striking Grey and Black Color Combination
- Protects Vital Components

ENGINEERED SPECIFICALLY FOR THE ROCKWELL AIM-65

- All Switches Accessible
- Integral Reset Button Actuator
- Easy Paper Tape Replacement

EASILY ASSEMBLED

- Absolutely No Alteration of AIM-65 Required
- All Fasteners Provided
- Goes Together in Minutes

MADE OF HIGH IMPACT STRENGTH THERMOFORMED PLASTIC

- Kydex 100*
- Durable
- Molded-In Color
- Non-Conductive

AVAILABLE FROM STOCK

- Allow Three to Four Weeks for Processing and Delivery
- No COD's Please

Applesoft II Shorthand

If you want to make Applesoft a little easier to use, try this program which permits entire commands to be input with a single control key. Since the command lookup is table driven, you can select the keys to conform to your own preferences. The techniques used provide a valuable understanding of how to add your own modifications.

Allen J. Lacy
1921 W. Oglethorpe
Albany, GA 31707

This routine allows a programmer to type in an entire Applesoft command with the use of one control key.

Overview

The routine Shorthand ties into the input hooks at \$38 and \$39 (56 and 57 decimal) and uses a table inside the RAM version of Applesoft II. In Applesoft's table, each command is represented as an ASCII string with the high bit off except for the last character of the string which has the high bit set. The routine also uses a monitor routine to read a key. If it is a control character, shorthand gets an address from its internal table. If the high byte of the address is 0, the routine passes the control character back. If the address is not 0 shorthand passes the command stored at that location back.

Step 1 turns DOS off. Step 2 turns Shorthand on. Step 3 turns DOS back on. But DOS will not be on at the same time as shorthand.

To use with ROM version.

Shorthand could be adapted to run with the ROM version of Applesoft II. The addresses in Shorthand would have to be changed. I do not have access to a ROM card and so do not know the addresses. But if the ROM version is just a relocated RAM version, the addresses in Shorthand and table just need \$C800 added to them.

Shorthand does not use all of the control keys because some have special functions. These functions are shown in Table 1. If you do not mind losing these

functions, these keys can be used also. The choices for which command is tied to which key is shown in the program listing. If you do not like my choices, you can change the command addresses stored in Table 2. The addresses are for the RAM version and will not work for the ROM version.

Use Of Shorthand

Shorthand is relocatable and can be placed anywhere in memory. I normally load it at \$300—\$3AE, which is where I assembled it. But it can be placed anywhere. Applesoft's HIMEM: can be used to protect some upper memory.

Example:

A 32K system without DOS can have Shorthand loaded at \$7F51-7FFF and then HIMEM: can be set to 32593. So to bring up Shorthand use the following steps:

1. LOAD and RUN the Applesoft TAPE
2. Enter the monitor by pressing RESET or do a CALL—151
3. Type
300.3AER
or type
7F51.7FFFR
4. Start tape with Shorthand on it and press RETURN, stop the tape when it has loaded
5. Type
OG
Press Return
6. Type
POKE 1144,0
Press RETURN

7. If Shorthand is at \$300—\$3AE type
POKE 56,0; POKE 57,3
If Shorthand is at \$7F51—\$7FFF type
POKE 56,81; POKE 57,127
8. Press RETURN
9. If Shorthand is at 7F51 type
HIMIM: 32593
Press RETURN

Another good place to store Shorthand is between Applesoft II and your program. The problem is that Applesoft's LOMEM: does not set the lowest memory used by Applesoft, but sets the point at which Applesoft will start storing variables. But the monitor can be used to set pointers. To do this the following steps are used:

1. LOAD and RUN the Applesoft II tape
2. Enter the monitor by pressing RESET or do a CALL—151
3. Type
3000.30AER
4. Start the tape with Shorthand on it and press RETURN
When it has loaded stop the tape.
5. Type
67:B0 30
Press RETURN
6. Type 30AF:0
30AF:0
Press RETURN
7. Type
OG

Shorthand will now be tied in.

Step 5 sets the pointer which tells Applesoft II where to start storing a program to \$30B0. Step 6 sets the byte just below the start point to 0, I do not know why Applesoft wants this, but it will bomb if it is not done. Step 8 causes Applesoft to reset the rest of its pointers to reflect the new start point.

Now every time you want to type one of the commands stored in the table just press the control key and another key at the same time.

Example:

To enter INPUT press the control key at the same time as the I.

I have made labels for my keyboard showing which command is under which key. To return full control to the key board, use the command IN 0. To turn Shorthand back on just POKE the correct values back into 56 and 57. Shorthand does not have to be turned off when you are finished programing and want to run a program, unless the program wants for

input one of the control keys which Shorthand uses. I normally set the hooks when I bring up Applesoft and leave them set.

The routine should work with DOS. I do not have DOS so these techniques are not tested. Since DOS communicates with the rest of the system via the input and output hooks at \$36—39, you can not set the hooks to tie in shorthand without turning off DOS. But DOS has its own internal hooks. Unfortunately the hooks are at different places for different memory sizes. In a 48K system the input hook is at \$A998, \$A999 (22120, 22119 decimal). For smaller systems subtract 48K—X from the numbers, where x is the memory size. The above information came from Exploring the APPLE II DOS by Andy Hertzfeld in MICRO 9. So POKE the address of Shorthand in the DOS hooks

Another way that should work is to turn DOS off by the use of the following steps.

1. After bringing up Applesoft and loading Shorthand type
PR O:IN O
Press RETURN
2. Use POKEs to set 56 and 57 if Shorthand is at \$300
POKE 56,0:POKE57,3
3. When you are finished type
CALL 976
Press RETURN

Step 1 turns DOS off. Step 2 turns shorthand back on. DOS will not be on at the same time as Shorthand.

The Value of 16 Bits

Several years ago, the guest speaker at the local computer club, a gentleman from Texas Instruments, talked about the importance of the size of a microprocessor. Using all kinds of charts, tables, and various rather logical sounding arguments, he determined that 8 bit micros did not make any sense and would never find much popularity or application! A 4 bit micro is all that is required in most process control situations, and anyone wanting to do real computer type stuff - number crunching, assembling, text processing - would much prefer a 16 bit micro. Conclusion: the 8 bit micro was doomed. Well, hundreds of thousands of 8 bit microcomputers later, it is obvious that there is a market for the 8 bit micro. Isn't 20/20 hindsight wonderful!

Actually, I did not buy this thesis at the time it was presented. I had worked on a number of projects with either minis or a precursor of the micros, and had discovered a number of instances in which an 8 bit processor was superior to its bigger brother. Does this seem strange. Let's examine the details.

One obvious type of application, in which we all participate to some degree, is any form of word processing. How many bits does it normally take to represent the normal alphanumeric and special symbols that we use in everyday writing, BASIC, assembler programming, and so forth? ASCII defines 128 characters, including a bunch of specialized control codes, and that seems to be enough for most applications. Even if you want to add special sets, such as greek for APL, the total number of unique codes required is normally going to be less than 256 decimal. Can you imagine

a keyboard to generate more than 256 characters? Since 8 bits can be used to represent 256 unique values, it is adequate for this work. In fact, it is ideal. A 16 bit machine either must ignore half of each byte, which is of course wasteful and essentially reduces it to an 8 bit machine, or must pack two 8 bit bytes into each 16 bit word. And then it must, of course, unpack the two bytes for processing, repack them again, and so forth. Therefore, the 8 bit micro is perfect for most word processing based applications. Since this single application category must account for a large percentage of the systems being purchased today, the strength of the 8 bit micro should not be surprising.

Another application I worked on used a high speed photo scanner to digitize material for use in newspaper production - halftones and text. The scanner produced 8 bit chunks of data. The mini-computer was 16 bit based, and a lot of overhead was spent in packing and unpacking data, making records come out to an integral number of words, and other such nonsense. While the fact that 8 bits were appropriate to this particular application may have been pure serendipity, I am sure that there are numerous process control types of application which have a similar data range and which could best be served by the 8 bit micro.

Okay, how about number processing. Surely the 16 bit micro is better at performing math functions than the 8 bit micro. True, there is some advantage to a 16 bit micro if your application requires a lot of number crunching. 16 bit math operations can handle twice as much data as 8 bit ones. But, the savings may be minimal. In many numeric calculations, the

amount of code and time spent actually performing math functions may be insignificant relative to the amounts required to do all of the other programming steps required - the set up, testing one bit, branching, subroutine jumps, and so forth. So, while there will probably be a time improvement with a 16 bit micro in heavy math programs, the savings may not be as great as initially imagined.

Where does the 16 bit computer excel then? I am not sure that, in general, it does. Given the generally higher cost and complexity of a 16 bit data bus, and so forth, the 16 bit must justify itself for a particular application. It is not a generally "better" solution. There are some features of a typical 16 bit micro that would be nice to have in the 8 bit as well. This is particularly true in improved addressing capabilities. Since the address space of most 8 bit micros is actually 16 bits, it would make sense in many instances to be able to handle the full range of address space with 16 bit registers. In the 6502, a number of 16 bit addressing modes are already supported. The two main places where the 8 bit limit is restrictive are in the relative branches and in the indexed instructions. The "proposed" 6516 discussed by Randall Hyde in this issue shows how the benefits of a 16 bit micro can be combined with the strengths of the 8 bit micro to form a superior computer. It is interesting to note, however, that many of the improvements are **not** based on 16 bits, but are independent enhancements. My latest intelligence suggests that the initial statement in the referenced article - "Synertek is almost ready to ship the SY6516" - is a bit optimistic. But, if we all call and ask our Synertek Reps about this superior product, maybe we can get some action!

Robert M. Trapp

Software for the Apple II

SCORE: 108

DYNAMAZE—a dazzling new real-time game. You move in a rectangular game grid, drawing or erasing walls to reflect balls into your goal (or to deflect them from your opponent's goal). Every ball in your goal is worth 100 points, but you lose a point for each unit of elapsed time and another point for each time unit you are moving. Control the speed with a game paddle: play as fast as ice hockey or as slowly and carefully as chess. Back up and replay any time you want to; it's a reversible game. By Don Stone. Integer Basic (plus machine language); 32 K; \$9.95.

SCORE: 105

ULTRA BLOCKADE—the standard against which other versions have to be compared. Enjoy Blockade's superb combination of fast action (don't be the one who crashes) and strategy (the key is accessible open space—maximize yours while minimizing your opponent's). Play against another person or the computer. New high resolution graphics lets you see how you filled in an area—or use reversibility to review a game in slow motion (or at top speed, if that's your style). This is a game that you won't soon get bored with! By Don Stone. Integer Basic (plus machine language); 32 K; \$9.95.

What is a **REVERSIBLE GAME**? You can stop the play at any point, back up and then do an "instant replay", analyzing your strategy. Or back up and resume the game at an earlier point, trying out a different strategy. Reversibility makes learning a challenging new game more fun. And helps you become a skilled player sooner.

WORLD OF ODYSSEY—a new adventure game utilizing the full power of Disk II, which enables the player to explore 353 rooms on 6 different levels full of dragons, dwarfs, orcs, goblins, gold and jewels. Applesoft II 48K; \$19.95 includes diskette.

PERQUACKEY—an exciting vocabulary game which pits the player against the clock. The object of the game is to form words from a group of 10 letters which the computer chooses at random. The words must be 3 to 10 characters in length with no more than 5 words of any particular length. Each player has only 3 minutes per turn. The larger the words the higher the score. Applesoft II 16K; \$9.95.

APPLESHIP—is a naval game in which two players enter their ships in respective oceans. Players take turns trying to blast their opponent's ships out of the water. The first player to destroy their opponent's ships may win the game. A great low-res graphics game. Applesoft II 32K; \$14.95.

The APPLE Stripper

One of the classic dilemmas in BASIC has to do with REMarks. If you use them, they take up space and time. If you do not use them, the code is hard to understand. This program resolves the problem. It permits you to generously REMark your program for documentation purposes and then remove the REMarks for the run-time version.

Bill Crouch
P.O. Box 926
Long Beach, CA 90801

As a writer of custom business software for the APPLE computer, I kept running into the same conflict; good programming style insisted that I document my programs with frequent REMark statements. My customers would have a hard time understanding or changing my programs if I did not.

On the other hand, large business programs use a great deal of memory and every byte is precious. The Applesoft manual tells us that the statement: 130 THIS IS A COMMENT uses up 24 bytes of memory. In a large program, a lot of memory will be taken by REMs, leaving less for arrays and program operation. It also means more frequent waits while the machine "housecleans" its string space.

The answer is obvious; write the program with REMarks and then remove them in the final working version. If changes are needed, make them on the version with REMarks and then remove the REMs again after the bugs have been corrected.

Removing REMs by hand took too long so I wrote a simple program to do it for me. It is disk based and will work on any APPLE with a disk drive.

Program Requirements

To use this program you need only observe a couple of simple rules. First, NEVER GOTO or GOSUB to a REMark. Always GOTO or GOSUB to the first line of code after the REMark.

Secondly, for maximum benefits, put your REMarks on a separate line rather than at the end of a line of code. This program only eliminates those lines where a REM is the first thing in the line.

```
10 REM
    REM KILLER

20 REM BY BILL CROUCH
30 REM PO BOX 926
40 REM LONG BEACH CA 90801

280 PRINT CHR$(4);"OPEN STRIP.FILE"
290 PRINT CHR$(4);"WRITE STRIP.FILE"
300 FOR Y = 1 TO X
310 PRINT ARRAY(Y): REM SAVE LINE # OF REM
320 NEXT Y
330 PRINT CHR$(4);"CLOSE"
340 END

]
]PR#0
```

How to Use the Programs

There are two separate programs. The first, XFILE.MAKER, must be appended to the end of your program. You could type it in yourself or, better still, use the merge routine on the DOS 3.2 Master. The only requirement is that line 63000 be after the last line of your program. It tells the next program that it is done.

You start the process with the command "RUN 63000"

You should have both programs on their own diskette with plenty of space for their text files. If REM KILLER is not on the same diskette with XFILE.MAKER, remove line #63130.

XFILE.MAKER will convert your program into a text file and then run REM KILLER. REM KILLER then reads the text file, makes a list of REMs and then writes them off as STRIP.FILE.

By the way, certain characters in your program will cause the computer to say EXTRA IGNORED during the running of REM KILLER. You can ignore it too.

When it is done, load your original program and EXEC STRIP.FILE. Every line which is a REMark will be removed. Then save the stripped program.

Of course also save a copy of your original program. The first program I used this on was part of a trucking company

package. It saved me over 2400 bytes.

How it Works

XFILE.MAKER clears the screen with line 63050 and squashes the listing to suppress extra carriage returns with line 63060.

The rest of the program writes your program to the disk as a text file. Line 63130 calls REM killer. (Note: CHR\$(4) is the same as CTRL D and is required before every APPLE disk command.)

REM KILLER: Line 60 sets up an array in which REMs are saved. It now allows for 1000 REMs which probably is too many. If you have memory limitations, you may reduce this number and the corresponding one on line 210.

Line 140 checks for the end of your file and is the reason line 63000 is required in XFILE.MAKER.

Lines 150-190 get rid of null lines and all non-alpha characters. Line 200 then sees if the first alpha string is REM. If so, it saves the number in the array.

Lines 240-340 save the approximate line numbers as a text file called STRIP.FILE.

When you EXEC STRIP.FILE, the line numbers are printed just as if you had typed them yourself. And the REMark lines are eliminated.

XFILE.MAKER

```

"As manager of Personal Computers, here at Computerland of San Francisco, evaluating new software products is part of my job. With all the word processors on the market today, I choose EasyWriter for my business and personal use."

—Karen Dexter Weiss

EasyWriterTM

80 COLUMNS OF WORD PROCESSING POWER FOR YOUR APPLE II COMPUTER

Finally . . . INFORMATION UNLIMITED SOFTWARE is able to bring you a complete word processing system for the Apple II. The new EasyWriter system gives you **80 columns of upper and lower case characters** for your Apple's video display, using the new SUP'R'TERM 1 board!

You can purchase the new EasyWriter 80 column word processing system as a complete hardware and software package directly from our new office in California, or from your local computer dealer.

A long time ago, we decided to bring you the best simple-to-use and understand tools for your computer system. Today we've taken another stride in that same direction. It took some doing, in both hardware and software, but we think you'll agree that for the buck, no one can touch us.

Check it out:

- 80 Columns on the Screen!
- Upper & Lower Case!
- Global Search & Replace!
- Underlining!
- Bidirectional Printing!
- Incremental Spacing!
- File Appending!
- 50 Pages of Text Per Disk!

Graphics and the Challenger C1P, Part 4

This continuing series on Graphics and the Challenger shows how to apply the material to create pictures and demonstrates how this may be used in Computer Aided Instruction.

William L. Taylor
246 Flora Road
Leavittsburg, OH 44430

Computers are well suited for use in an educational environment, whether this is in a class room at a local high school, college, or in an industrial training seminar. The computer can aid the instructor or can be used as an individual instructor. With the introduction of the micro processor and the number of low cost personal computers that are owned and used by individuals as a hobby, the computer must be considered as a training tool for use in the home environment.

Children seem fascinated by computers and are equally fascinated by any device that has a keyboard. If the computer has any form of graphics display, either animated or still, they seem even more delighted to experiment with the device. This leads to the point that if children are drawn to the computer, then the computer, if programmed to be a teaching aid, can be a valuable tool in their education.

With this evidence I decided to try to develop a program that combines the elements that have the most attraction for children. Also, through this method, the program will at the same time be an educational tool.

The program, which I will call "Picture" was developed to be a teaching aid in the development and spelling of English words. The program uses Graphics to draw a picture of several objects. Then the child is asked to spell the different parts of the picture that have been displayed. The child tries to spell the names of the objects displayed, and the computer displays the answer "Right!" or "Wrong" on the screen in large letters.

In Part 3 of this series ("Graphics and the Challenger C1P"), we described the

features of the C1P. We developed some programs using Basic and Machine Language, in combination, to further explore the Graphics capabilities of the C1P. Many techniques were discussed and many Basic functions and statements were used in our example programs. This time let's continue with our graphics development and try a new programming approach.

This article has a two-fold purpose. First to continue our discussion of how to use the Graphics of the OSI Challenger C1P, and to secondly present a working program using the Graphics techniques

in a Computer Assisted Instruction program (CAI). The program in this part will be used as a CAI tool and will be treated as an example program. *This program, by no means, is complete.* That is, it can be expanded by the user. The program simply is a pure example of how to develop graphic plots: get these characters out to the monitor screen. Combining these Graphics with a program is a useful tool in the hands of the enterprising programmer. From the techniques that are presented in this example, the user will more fully understand how to develop such programs of his own.

Program Description

Let's start with a description of the "picture" program. First, what the program does is to generate a picture on the monitor screen. This picture is shown in Figure 1. Notice that we have developed routines in the program that will POKE characters from the Graphics Set in the Character Generator ROM out to the monitor screen at the locations shown on the chart. In part 3 of this series, I gave a similar video memory chart. This time we will use the chart as in Figure 1. Notice that in the chart, we have drawn the picture that we wish to POKE out to the screen. All the memory locations can now easily be found, and routines written to accomplish the end task. Such a routine is located in the program between lines 10000 and 10420. This routine is used to draw the House, the Airplane, the Sun, the Man and the Car in the picture. All the parts of the picture were built from the Graphics elements in the Character Generator ROM. A list of these character elements appears in the upper left corner of Figure 1.

Please examine the program listing, starting at line 10000. Take the value in the statement line, For A = 53606 To 53926 Step 32. From these statement values find the corresponding value on the video memory map chart in Figure 1. It will be found that when the statement line at 10000 is compared to the memory map, you will be able to see just what the For-Next loop does. The Characters will be poke'd to these locations. Examine the program completely from line 10000 to 10420 to see how each unit works compared to the map. This example should give you a clear understanding of how to use the memory chart so that you can develop routines for your own program.

The program "Picture" contains two other Graphics Routines. These routines are used with the program to inform the user (or student) if he has identified and correctly spelled and element on the picture, or if he has identified and incorrectly spelled the object. These routines display the words: Right and Wrong, respectively. These words are in large graphic format at the top of the C1P's monitor screen. A video memory location map of these elements are in Figures 2 and 3. Please review these two figures for the memory locations. The subroutines for these graphic displays are located beginning at line 20000 for the word "Right" and at line 5000 for the word "Wrong".

These two subroutines were developed in the same manner as the one for the picture. That is, the video memory locations were plotted on the video memory plotting chart. Next, the graphics elements that were needed to generate the characters were selected from the list of graphics elements and finally, routines were written to do the task of POKEing the elements out to the screen. Analyze

```

the video memory plotting charts of Figure 2 and Figure 3 along with the subroutines at lines 5000 and 20000 to see how the routines were plotted, written and used in the program.

The subroutine located between lines 8000 and 8070 is for loading the machine code routine into user memory. This routine is for the Fast Screen Erase routine used by the program to clear the screen whenever called. This subroutine will be called at line 1 in the Main Line Basic program. The routine for the fast screen erase has been included in the previous parts of this series. The reader should review these parts for a complete description of this routine.

Now that I have described the Graphics generating routines and how they were developed, let's continue with the Main-line BASIC program that uses the subroutines. The program from line 35 through 500 forms the BASIC CAI user program. This program is a demonstration of how to develop programs in which the user can be taught such things as spelling, which is the purpose of this program, combined with the graphics presentation.

The For-Next loop at line 155 is used to give the user time to read the screen text just displayed. Statement line 160 sets the USR Vector to point to the Fast Screen Erase Machine Language routine located at OFE8 hex or 8168 decimal. Line 170 causes the program to jump to the machine language routine at OFE8 or 8168 decimal where the screen will be erased.

Input from the user is accepted at statement line 220. This data is stored in a

string variable, labeled B\$. The input string (B\$) is then compared in the string looking up table for a string match. If a match between the input and a table content is found, the information is then passed to the variable A as a decimal value. This value is then compared at Line 330 and Line 335 to check for a correct answer from the user. If a correct match was found in the string table, the A variable will force a GOSUB to Line 20000 where the answer word "Right" will be displayed for the user's answer. If a match did not occur in the string table, at

line 330 a GOSUB to line 5000 will cause the answer word "WRONG" to be displayed informing the user that the answer was not correct or was not an element in the picture. At line 500 a return to the beginning of the BASIC Main-Line program will cause a new pass through the program.

This program, as stated before, is not really complete, but an example to show how such a program can be constructed. This program can be expanded or modified by the reader. If you should desire to expand the picture display to include more objects, then these object names should be included in the string table.

The complete program including the Graphics routines and the fast screen erase routine is located at the top of the first 4K of user memory. If you have more memory and wish to expand the program, you will have to relocate this routine. Listing 2, shows the modifications to the program which will allow the routine to be relocated to begin at 1FE8 Hex or 8168 decimal. The user must set memory size to 4050 decimal for a system with 4K of memory, and 8167 for a 8 K system.

HARDWARE: C1P VIDEO—Gives true 32 Chars/Line with guard bands. This is not a make-shift mod. It makes your video every bit as good as the 4P's plus you have switch selectable 1, 2 and 3 MHz. CPU clock as well as 300, 600 and 1200 baud for cassette and serial port all crystal controlled.

Complete Plans — \$18.95 Kit — \$39.95
or Send in your C1P to:

Personal & Business Computer Connection
38437 Grand River
Farmington Hills, MI. 48018

and we will install the video mod. for \$79.95. Other mods available...Add sound: RS-232 port cassette motor control

SOFTWARE: (With Documentation) For C1, C2, 4P & 8P. Chess 1.9, Backgammon, Excellent card games, Arcade type games, Utility Programs, Mini Word Processor, Memory Maps, etc.

Catalog With Free Program (hard copy) and Memory Map for BASIC in ROM Models...\$1.00

Progressive Computing

NOTE: Any Modification will VOID your OSI warranty.

WHAT'S THE ONE THING NO ONE HAS THOUGHT ABOUT DOING WITH COMPUTERS?

We acknowledge that computers are the most valuable data processing devices ever conceived for business and education, and are the most creative toys on earth. However, the potential of computers has only begun to be explored. Avant-Garde Creations has discovered and developed a way to use computers in the areas of self-transformative experiences, life-awareness, making relationships work, and "getting your act together".

Previously, it was thought that such trips as est, Lifespring, Actualizations, and others were the only means of significantly dealing with the above areas. We acknowledge that they are indeed valuable experiences. But because one has to devote many full days and hundreds of dollars to such trips, all those people who aren't yet ready to get into all this that deeply are left with nowhere to turn for such awareness experiences.

The intention of Avant-Garde Creations is to change that. We have the knowledge and techniques, and now we have the programs. The first is called "The Life Dynamic Transformation Experience", and the second is "The Relationship Life Dynamic". Both are available on disk at this time. Over the next year 9 more life dynamic areas programs will be developed in the following areas: physical, creativity, environment, meaning, conditioning, sexuality, normalcy, aliveness, and responsibility.

Why spend hundreds of dollars to find out if you're into working on such areas of your life? Why not get something you can use over and over, at your convenience?

One of the most exciting aspects of our programs is that in many program sections, it was discovered that "game-playing" was the most effective method of getting people to perceive a difficult truth. So from time to time you're given 100% original games to play, games specifically designed to give you the opportunity to "get" something challenging or elusive. So even if you don't "get" something, you'll have a great time!

Apple II with Applesoft and 48K required with single disk drive.

The Life Dynamic Transformation Experience... \$15.95 postpaid
The Relationship Life Dynamic... \$15.95 postpaid
Complete Program Listings available:
The Life Dynamic Transformation Experience... \$4.95 postpaid
The Relationship Life Dynamic... \$4.95 postpaid

If you don't have an Apple II with Applesoft, there are approximately 5 Apple stores in every state. We'll send you the address of the one nearest you. Your Apple dealer will be glad to give or rent you (very cheaply) some time on one of their computers, and will be happy to get you started running the program. In case you think you need to understand computers to run our programs, we assure you that if you can read English and type your name, you won't have any problem.

AVANT-GARDE CREATIONS

PO Box 30161 Eugene, OR 97403 Dept. C1

SYM-1, 6502-BASED MICROCOMPUTER

- FULLY-ASSEMBLED AND COMPLETELY INTEGRATED SYSTEM that's ready-to-use
- ALL LSI IC'S ARE IN SOCKETS
- 28 DOUBLE-FUNCTION KEYPAD INCLUDING UP TO 24 "SPECIAL" FUNCTIONS
- EASY-TO-VIEW 6-DIGIT HEX LED DISPLAY
- KIM-1* HARDWARE COMPATIBILITY
The powerful 6502 8-Bit MICROPROCESSOR whose advanced architectural features have made it one of the largest selling "micros" on the market today.
- THREE ON-BOARD PROGRAMMABLE INTERVAL TIMERS available to the user, expandable to five on-board.
- 4K BYTE ROM RESIDENT MONITOR and Operating Programs.
- Single 5 Volt power supply is all that is required.
- 1K BYTES OF 2114 STATIC RAM onboard with sockets provided for immediate expansion to 4K bytes onboard, with total memory expansion to 65, 536 bytes.
- USER PROM/ROM: The system is equipped with 3 PROM/ROM expansion sockets for 2316/2332 ROMs or 2716 EPROMs
- ENHANCED SOFTWARE with simplified user interface
- STANDARD INTERFACES INCLUDE:
 - Audio Cassette Recorder Interface with Remote Control (Two modes: 135 Baud KIM-1* compatible, Hi-Speed 1500 Baud)
 - Full duplex 20mA Teletype Interface
 - System Expansion Bus Interface
 - TV Controller Board Interface
 - CRT Compatible Interface (RS-232)
- APPLICATION PORT: 15 Bi-directional TTL Lines for user applications with expansion capability for added lines
- EXPANSION PORT FOR ADD-ON MODULES (51 I/O Lines included in the basic system)
- SEPARATE POWER SUPPLY connector for easy disconnect of the d-c power
- AUDIBLE RESPONSE KEYPAD

Synertek has enhanced KIM-1* software as well as the hardware. The software has simplified the user interface. The basic SYM-1 system is programmed in machine language. Monitor status is easily accessible, and the monitor gives the keypad user the same full functional capability of the TTY user. The SYM-1 has everything the KIM-1* has to offer, plus so much more that we cannot begin to tell you here. So, if you want to know more, the SYM-1 User Manual is available, separately.

SYM-1 Complete w/manuals \$229.00
SYM-1 User Manual Only 7.00
SYM-1 Expansion Kit 60.00

Expansion includes 3K of 2114 RAM chips and 1-6522 I/O chip.

SYM-1 Manuals: The well organized documentation package is complete and easy-to-understand.

SYM-1 CAN GROW AS YOU GROW. Its the system to BUILD-ON. Expansion features that are soon to be offered:

*BAS-1 8K Basic ROM (Microsoft) \$89.00
 *KTM-2 TV Interface Board \$319.00

*We do honor Synertek discount coupons

QUALITY EXPANSION BOARDS DESIGNED SPECIFICALLY FOR KIM-1, SYM-1 & AIM 65

These boards are set up for use with a regulated power supply such as the one below, but, provisions have been made so that you can add onboard regulators for use with an unregulated power supply. But, because of unreliability, we do not recommend the use of onboard regulators. All I.C.'s are socketed for ease of maintenance. All boards carry full 90-day warranty.

All products that we manufacture are designed to meet or exceed industrial standards. All components are first quality and meet full manufacturer's specifications. All this and an extended burn-in is done to reduce the normal percentage of field failures by up to 75%. To you, this means the chance of inconvenience and lost time due to a failure is very rare; but, if it should happen, we guarantee a turn-around time of less than forty-eight hours for repair.

Our money back guarantee: If, for any reason you wish to return any board that you have purchased directly from us within ten (10) days after receipt, complete, in original condition, and in original shipping carton; we will give you a complete credit or refund less a \$10.00 restocking charge per board.

VAK-1 8-SLOT MOTHERBOARD

This motherboard uses the KIM-4* bus structure. It provides eight (8) expansion board sockets with rigid card cage. Separate jacks for audio cassette, TTY and power supply are provided. Fully buffered bus.

VAK-1 Motherboard \$139.00

VAK-2/4 16K STATIC RAM BOARD

This board using 2114 RAMs is configured in two (2) separately addressable 8K blocks with individual write-protect switches.

VAK-2 16K RAM Board with only \$239.00
8K of RAM (1/2 populated)

VAK-3 Complete set of chips to \$125.00
expand above board to 16K

VAK-4 Fully populated 16K RAM \$325.00

VAK-5 2708 EPROM PROGRAMMER

This board requires a +5 VDC and +12 VDC, but has a DC to DC

multiplier so there is no need for an additional power supply. All software is resident in on-board ROM, and has a zero-insertion socket.

VAK-5 2708 EPROM Programmer \$249.00

VAK-6 EPROM BOARD

This board will hold 8K of 2708 or 2758, or 16K of 2716 or 2516 EPROMs. EPROMs not included.

VAK-6 EPROM Board \$119.00

VAK-7 COMPLETE FLOPPY-DISK SYSTEM (See March Issue of Micro)

VAK-8 PROTYPING BOARD

This board allows you to create your own interfaces to plug into the motherboard. Etched circuitry is provided for regulators, address and data bus drivers; with a large area for either wire-wrapped or soldered IC circuitry.

VAK-8 Prototyping Board \$39.00

POWER SUPPLIES

ALL POWER SUPPLIES are totally enclosed with grounded enclosures for safety, AC power cord, and carry a full 2-year warranty.

FULL SYSTEM POWER SUPPLY

This power supply will handle a microcomputer and up to 65K of our VAK-4 RAM. ADDITIONAL FEATURES ARE: Over voltage Protection on 5 volts, fused, AC on/off switch. Equivalent to units selling for \$225.00 or more.

Provides +5 VDC @ 10 Amps & +12 VDC @ 1 Amp
VAK-EPS Power Supply \$119.00

KIM-1* Custom P.S. provides 5 VDC @ 1.2 Amps
and +12 VDC @ .1 Amps

KCP-1 Power Supply \$39.00

SYM-1 Custom P.S. provides 5 VDC @ 1.4 Amps

VCP-1 Power Supply \$39.00

SYMple BASIC Data Files

The SYM-1 has a Microsoft BASIC available in ROM. Data Save and Data Load via the cassette are NOT supported by this version. The routines required to implement these two important functions are presented here.

John M. Blalock
3054 West Evans Drive
Phoenix, AZ 85023

If you've read "A SYMple Memory Expansion" in the August 1979 issue of MICRO and "Another KIM Expansion" in the September 1979 issue of *Kilobaud Microcomputing*, then you know that I like Micro-Z's BASIC for the KIM. You will also know that I have the Synertek BAS-1 BASIC for the SYM. Both versions were written by Microsoft, have 9-digit decimal accuracy, etc. but differ in some of their functions.

Comparing the Micro-Z Synertek BASICS

Synertek BASIC has a more convenient USR function and a &"hex" function that are definite improvements over the original BASIC. Their ROM version has no GET function like Micro-Z's. Another difference is that a response of a carriage return only to an INPUT statement will cause a break in program execution with Synertek's BASIC. Micro-Z has supplied a patch to defeat this break. The Synertek ROM does not include any trig functions, but they have recently released Technical Note #53-SSC that gives you full trig capability using only 313 bytes of RAM.

The main difference between the two BASICS, then, is the data save/data load feature added to his version by Bob Kurtz of Micro-Z. This is a very valuable feature that Microsoft left out. BASIC can not be used to maintain any types of files such as mailing lists, inventory records, or financial records without this feature. Perhaps you could enter the data via DATA statements, but that would be a very trying task indeed! This feature is the major reason that I have preferred Micro-Z's BASIC over Synertek's.

Data Save/Data Load for Synertek BASIC

Listings 1, 2, and 3 are my first attempts to provide the same data save/data load functionality for the SYM with BAS-1. Listing 1 is just BASIC initialization, program loading, and a LIST of the program. All terminal input has been underlined for clarity. The little crooked arrows represent a carriage return typed in.

Listing 2 is a RUN of the program showing the means used to save the data. Three separate records are saved; the page zero pointers, the numeric data and string pointers, and the string data itself. To reload this data, BASIC must be initialized with the same memory size and the program can not have been modified.

Listing 3 is another RUN of the program after memory was cleared and the program reloaded. The data saved in listing 2 was restored, as can be seen. No, it is not as convenient as Bob Kurtz's method, but it works! Bob packs all the data together with a machine language subroutine and save it as one record. Another subroutine loads the combined record and then unpacks it, moving the data back to its original locations.

Machine Language Version of Data Save/Data Load

Listing 4 is a machine language subroutine that will save and load BASIC data files without having to turn control over to the SYM monitor. The data is still saved in three separate records, but they are recorded/loaded one right after another by the routine. An extra few seconds for each save or load (for sync, etc.) shouldn't hurt anyone, should it?

Listing 5 is a VERIFY dump of the subroutine. Load it in, VERIFY between the same addresses, and if you check sums match mine then you keyed it in correctly. Now we know why Synertek put those check sums on the VERIFY dumps! The rest of listing 5 shows BASIC initialization and the loading of the revised BASIC program.

Listing 6 is just a LIST of the revised program. Note the memory size was specified to allow room for the machine language subroutine which is called by statements 100 and 400. With either of the two methods, put the call to the load routine after any DIM statements and before the main program body. The call to the save routine should be at the very end of the program, as shown. Any changes to the program that increases the memory size needed for it will prevent data saved by a prior version from being loaded correctly.

Listing 7 is a RUN of the revised program wherein the data that is entered is saved at the end of the RUN. Listing 8 shows memory being cleared, BASIC initialization identical to that used in listing 7, and then the BASIC program being reloaded. The RUN of the program loads the data saved in listing 7.

If you plan on saving and loading data files very often, dedicating 148 bytes of memory to this subroutine should pay for itself in convenience over the method given earlier.

SYMple Memory Expansion Update

Regular readers of MICRO will recognize from the listings that my SYMple memory expansion board is still work-

A Perpetual Calendar Printer for the AIM

If you know the proper tricks, a Perpetual Calander is quite easy to program. Here it is presented for the AIM 65. In addition to being an interesting demonstration, it points out a few programming tricks required when using integer numbers in BASIC.

Mei Evans
1027 Redeemer
Ann Arbor, MI 48103

Another calendar printer? Yes, but with a couple of new twists. First, it puts out to the AIM printer. So the next time someone asks, "Okay, but what can it actually do?," you can give him an answer he can put in his pocket and take home with him.

Second, it has a built-in perpetual-calander algorithm that finds the starting day-of-the-week for any month of any year from 1583 AD (the start of the Gregorian calendar) to 999999999 AD (or until we change the calendar, or until the world ends, whichever comes first.) The algorithm is fairly simple, but the results can be impressive. For example:

```

RUN
HOW MANY MONTHS? 1
MONTH #? 7
YEAR? 1776
    
```

```

***** JULY 1776 ***
S M T W T F S
    1 2 3 4 5 6
 7 8 9 10 11 12 13
14 15 16 17 18 19 20
21 22 23 24 25 26 27
28 29 30 31
    
```

"So, Independence Day happened on a Thursday."

"You mean it figured out all those leap years clear back to 1776?"

"Well, the equivalent of that, yes."

"How do I know it's right?"

"You don't."

"Okay, print me December, 1941. I know what day Pearl Harbor happened on."

```

RUN
HOW MANY MONTHS? 1
MONTH #? 12
YEAR? 1941
    
```

```

** DECEMBER 1941 ***
S M T W T F S
    1 2 3 4 5 6
 7 8 9 10 11 12 13

```

The day-of-the-week algorithm appeared in **BYTE** (Day of Week and Elapsed Time Programs," W. B. Agocs, **BYTE**, September, 1979, p. 126). I read it, thought "That's neat," and forgot it. Then a calendar printing program for Teletype came out in **Kilobaud** ("Calendar Program," Steve Tabler, **Kilobaud Microcomputing**, October 1979, p. 102). Can the AIM do that on its printer? Sure it can! Can I build in that day-of-week algorithm so that it doesn't need starting instructions? Sure I can! The resulting AIM BASIC program is listed in Figure 1.

The starting day-of-week algorithm is in lines 85 through 150. It uses "Zeller's congruence," as explained in Agoc's article. Zeller first does some juggling of month and year numbers before getting down to the main computation of the day-of-week (variable DW in line 150).

The algorithm packs more power than I needed here; it works for any year, month, and day-of-month (day-of-month is variable DM in line 130). Since I only needed the beginning day-of-week of each month to be printed, I set DM = 1 in line 129. To restore the algorithm to its full power, just delete that one statement, and use DM as an input.

AIM BASIC (like most BASICs) does not allow much format flexibility in printing numbers, so to squeeze those date-lines onto the 20-column printer, a string variable, L\$, is used to build each line before printing. L\$ is first nulled (e.g., line 290), and is then built up, character by character, as in line 350:

```
L$ = L$ + CHR$(48 + D2)
```

This statement adds D2, the second (units) digit of a two-digit date number, to line L\$. As shown in Appendix E of the AIM BASIC manual, CHR\$(48) is ASCII "0" (zero), and the other digits follow. So, if D2 = 5, say, ASCII "5" is added to the string. After the last character has been added, the line is printed (e.g., line 380).

If you are fussy about format, the above technique gives you total control over each column of each line. If numbers don't print to suit you; don't print numbers, print characters.

AIM BASIC has one quirk which I haven't noticed in others (but if you're running a different BASIC, you might like to check it out). If X evaluates internally as less than an integer, but is sufficiently close to that integer, it will print as the integer, but INT(X) will truncate down to the next-lower integer; e.g., if X = 4.99999..., you get:

```

PRINT X
5
PRINT INT (X)
4

```

Don't believe it? Try this:

```

LIST
20 X=5
30 Y=X/3
40 Z=Y*X/3
50 X=3*3+Z/X
60 PRINT "X=";X;" I
INT(X)=";INT(X)
70 END

```

```

RUN
X= 5 INT(X)= 4

```

To prevent this from happening, add a dab to X before doing INT(X). How much is a dab? Anything less than the smallest meaningful increment in X. The first equation in line 258, for example, is computing the century from the year:

```
C = INT(Y/100 + .005)
```

If year Y increases by 1, Y/100 increases by .01, so the added dab is half that. This assures that it will work for the year 2000, and is small enough so it will also work for 1999.

Another example is on Line 262:
INT(YC/4 + .1).

When YC increments by one, YC/4 increases by .25, and the added dab is less than half that. The previous .005 would work fine here, too, but .1 costs fewer bytes.

A final note of minor interest. Line 80 sends two line-feeds to the printer before starting the calendar, and line 430 sends it five line-feeds, so you can tear off the finished calendar without having to pump th "LF" key. And PRINT TAB (100) is sure never than a string of five PRINT statements, isn't it?

```

HELP!!

9 Super utility programs for all AIM 65 programmers. **HEX INPUT:** Long and short versions, used for entering hex bytes into memory. **DUMP & HEXOUT:** Print out your memory in two formats for easy checking or location of individual bytes. **FIELD SORT:** A field sorting routine that finds usage in many tasks including helping you organize your programming. **RESTORE:** A program which automatically restores your editor after you've re-entered it improperly. This has been a real time saver for us. **ONE STEP:** Allows you to step thru the disassembly (K listing) one line at a time. **SYMBOL TABLE:** Is for use with the assembler ROM (How can you do without one?) It prints the beginning and ending addresses of your symbol table along with each label in your program and its address, all in a handy format. **RELOCATE:** Is a powerful program which allows you to move or relocate programs or data in memory. All who write, adapt or pirate programs or subroutines will appreciate this. It allows you to place them wherever you'd like. You can even open up spaces right in the middle of a program for inserting missing, new, or additional data or instructions. A programmer's dream.

GAIMS PAK I

5 Exciting games of skill for 1 or several players, using the full capabilities of the AIM 65 keyboard, display, and printer. **HANGMAN:** A challenging word game for 2 players. The AIM does the work and keeps score. **SCORE 4:** A challenging game in 3 dimensions. The printer shows the positions of the 2 players after each move. **REACT:** Your reflexes are tested in thousandths of a second. The display and keyboard are turned into a reaction timer. **GOL-LUMS CAVERNS:** Places you into the underground kingdom of the evil Wizard. You must move thru secret tunnels and cavern rooms avoiding traps, mysterious mist, and the Wizard's spell. To capture the Wizard you have only a few poison darts and your Magic computer to warn you when Evil is near. **BINHEX:** Teaches and tests your ability to convert Binary numbers into their Hexadecimal equivalents. Fun for budding programmers, and helps you to perfect a needed skill for fast and efficient programming.

MATH WHIZ

6 Programs dealing with numbers & math & the AIM 65. **ADD & SUBTRACT:** This powerful utility program turns your AIM 65 into a multiple precision calculator. **TOTAL:** Adds up to four decimal or hexadecimal numbers at a time. **TEST MEMORY:** Lets you really check out your RAM memory. **FIBBONACCI:** You learn about these important numbers as your AIM generates them in a series. **DEC TO HEX:** A multi-use program and algorithm for changing decimal numbers into their hex equivalents. **TIMER:** Makes your AIM 65 into a timer or a 12 or 24 hour clock, displaying or printing hours, minutes and seconds. A super demo of the power of the AIM 65.

YOU CAN NOW DEMONSTRATE THE POWER OF YOUR AIM 65 WITH CYBERDYNE'S DYNAMIC ACTION SOFTWARE. ALL OF OUR PROGRAMS RUN ON 1K OR 4K AIMS. ALL SOFTWARE ON EZ-LOAD TAPE CASSETTES. COMPLETE TEXT, PROGRAM, & LOADING INSTRUCTIONS ARE INCLUDED.

"TAKE AIM" MANUAL, VOL I by JAMES HOYT CLARK of CYBERDYNE'S staff, coming soon—watch for it or write for info. A guide for all. Master AIM 65 hardware & software. A lab and learning manual, extension, clarification, & index to AIM 65 documentation. Over 30 programs. Explained & fully documented (games, math, utility, printer, display, & more).

HOT LINE!!

[801] 224-2745

GAIMS PAK II

6 Value packed games of skill and chance at less than \$1.75 each. Created for maximum enjoyment of the AIM 65 by you and others. **BRICKS:** This program is unique because it learns from your mistakes and successes, while you play. It actually becomes "smarter" as you and the computer compete in a series of games. A real challenge to your skills of logic, deduction, and memory. **TIC-TAC-TOE:** Need we say more than the AIM 65 is a fair and impartial scorekeeper. **CARDS:** Gives you practice in when to hold-em and when to fold-em as your AIM 65 deals 5 CARD STUD from an unmarked and randomly shuffled deck. **LOGICAL ORDER:** Tests your skills as a Master-Mind of reason and logic as you try to deduce a random 4 number sequence in the fewest number of tries. **STARWAY 090:** Places you at the controls of a crippled spacecraft. You must successfully pilot your craft back to the mothership for a soft rendezvous. Your supply of fuel is limited and must be used with care to avoid disaster. **ESP:** Even computers can have ESP (or seem to). You mentally pick a number, answer a few questions (without disclosing the number), and your AIM 65 will guess the number correctly every time.

SHOW OFF

7 Programs (less than \$1.50 each) which show off all the features of the AIM 65. **SIGNS:** Lets you print 2 sizes of letters edgewise on the AIM 65 printer & make large banners. **ROTATING BILLBOARD:** Shows your messages as they rotate along the display. **PRINTER WAVE:** A good demo of user control of the AIM 65 printer. Starts you into graphics printing. **PAPER ADVANCE:** Gives you software control of the printer paper advance. See those last few lines printed for a change. **LINE FEED:** This time it is hardware control of the paper advance. **CURSOR DEMO:** You can light all 16 segments of the displays or type in different display patterns. **KEYBOARD INTERRUPT:** Gives you hardware control of the keyboard. Scans the keyboard for key closures without interrupting program execution. ALL PROGRAMS in this section may be used in your own programs as subroutines or run on their own as demos. Full instructions included.

AIM 65 & 6502 RELATED PRODUCTS

I/O-TTY-CASSETTE connector board for the AIM 65. Plugs directly to AIM 65 app connector (J1). Includes AIM connector, TTY and recorder jacks, cable set for 1 recorder. PC board with traces & holes for LED indicators, switch input sensors, optoisolators, drivers, relays, audio amp, & AIM 65 I/O training course, with software. AIM I/O BOARD-Kit \$19.75. Assembled \$22.75.

Bi-Directional Scrolling

Everyone knows that a teletype only moves the paper in one direction - up. Likewise, the Apple display only scrolls one way - up. Now you can have scrolling in both directions - up and down - with these routines..

Roger Wagner
SW Data Systems
P.O. Box 582
Santee, CA 92071

By using the machine language routines given below, it is possible to scroll either text/gr page in either direction.

The up-scroll routine is derived from APPLE computer's red Reference Manual with the difference being that a zero-page location is referred to determine which page to scroll. The down scroll routine makes similar use of the same zero-page byte.

To use the routine a few entry conditions must be met:

1. Load the binary routine into the \$300 page of memory starting at \$300.
2. Set pointers 6,7, and 8,9. If you want to bring new information onto the screen from RAM as you scroll 6,7 must point to the location in memory where the data to be loaded onto the top line of the screen will come from when you scroll the screen page down. Similarly 8,9 point to the place in memory to get the data for the bottom line when you scroll up.

If you want to use this routine to directly view memory, the easiest way to set the pointers 6,7 and 8,9 is to set 8 and 9 to the address you want to start viewing at. Put the low order byte in 8 and the high order in 9. (The screen height plus 1.) Then set 6,7 to the same value as 8,9 were originally, i.e., the low and high byte bring the starting address. Last of all, scroll back down one line to bring the starting address line into position as the first line of text visible at the top of the screen.

If you do not want new data brought onto the screen, then 6,7 and 8,9 will have

```
10 LOMEM:3072
20 REM OR SET LOMEM: MANUALLY BEFORE RUNNING.
30 CALL -936: INPUT "PAGE 1 OR 2?":PAGE
40 PRINT "INPUT ADDRESS (< 32767) TO START AT:": INPUT A
50 REM TO SCROLL WITHOUT BRINGING IN NEW DATA ENTER '0' FOR ADDRESS.
60 IF A#0 THEN 100: TEXT : CALL -936: POKE 34,1: REM FREEZE ONE BLANK LINE AT TOP OF SCREEN
70 VTAB 12: PRINT "(SAMPLE PG. 1 SCREEN DATA)"
80 POKE 6,0: POKE 7,4: POKE 8,0: POKE 9,4: REM BRING NEW SCREEN DATA FROM THAT BLANK LINE
90 GOTO 150
100 LB=A MOD 256:HB=A/256
110 POKE 5,PAGE*4: IF PAGE=2 THEN POKE -16299,0
120 POKE 8,LB: POKE 9,HB
130 FOR I=1 TO 25: CALL 768: NEXT I
140 POKE 6,LB: POKE 7,HB

Change of Address?

We are still having problems with those of you who are moving around. Please notify us of any change of address so that you will not miss any issues. The Post Office does not return the undelivered copies, so we lose both the postage and the magazines. Send address changes to MICRO, c/o Carol Stark, Box 6502, Chelmsford, MA, 01824. Please include your old label or your subscription number.

to point to a part of memory that contains 40 blank space characters. One way to do this is to freeze on blank line on either page 1 or 2, and then set 6, 7 and 8, 9 must be reset to that value each time the scroll is done. This is because normally the scroll routine updates 6,7 and 8,9 by the screen width so as to remain synchronized with the screen display another technique is to just clear the top or bot-

tom line to blanks each time a scroll is done.

3. Location 5 must hold a 4 for page 1 scrolling, and an 8 for page 2.
4. That's all. Now when you want the screen to scroll just 'CALL 768' to scroll up, and '845' to scroll down.

Special Notes:

If you are going to use page 2 of text/gr in Integer Basic, be sure to protect the variables with a 'LOMEM': 3072. This may be done before running the program, or if you know how, put as an early line in the program.

To use page 2 in Applesoft is more difficult, but can be done. First, location \$3AB in the machine code must be changed from \$05 to \$1F. Also, you must POKE 31 with a 4 or 8 as compared to the POKE 5 in Integer.

The real rub is that Applesoft programs normally begin in memory at \$800 (hex) which conflicts with page 2 use. The way around this is to do a 'POKE 104, 12: POKE 3072, 0' before loading your program. After loading do a 'CALL 54514' (unnecessary with DOS 32.). Unless you do a 'RESET', 'Control-B' other programs. Unfortunately, use of page 2 with the RAM version of Applesoft is to my knowledge impossible. (Sorry...)

If you wish to move the scrolling routine for some reason, the only location-dependent aspects of the code are 5 'JSR's and 1 'JMP' within it. Since these operations always reference absolute addresses they will have to be rewritten. Of course, if you have a relocate utility, it is that much easier.

For further enlightenment, see the sample Integer Basic program which makes use of the scrolling routine. Have Fun!

Location dependent:

```

$303: JSR $39E
319: JSR 39E
34A: JMP 39C
353: JSR 39E
369: JSR 39E
39E: JSR 3A6

```

If page 2 of TEXT/GR is to be used, it must be protected by a 'LOMEM:3072' for integer BASIC, or a 'special Load' (as described in article) when using Applesoft.

Note: \$3AB must be changed from \$05 to \$1F for Applesoft.

SYNERGISTIC SOFTWARE

presents

THE MODIFIABLE DATABASE by Chris Anson & Robert Clardy

The Modifiable Database is a general purpose, user oriented database program that can be easily customized for your specific data management application. Create any number of application programs such as mailing lists, bibliography files, inventory controls, personnel files, accounting programs, etc. The only limitation is your own imagination.

The program uses fast and flexible machine language search and sort routines, provides for easy record editing, and can search or print up to 2 disks of records with a single command. All commands are invocable by a few keystrokes. There's never been an easier to use or more flexible data management program.

Applesoft program requires 48K and disk	\$49.50
Modifier Module 1 lets you add accounting and numeric processing features to your program	\$15.00
Modifier Module 2 lets you format your output in any way desired (columnar, standard forms, suppressed fields, etc.)	\$15.00

AVAILABLE AT YOUR LOCAL DEALER OR SEND CHECK OR INQUIRY TO SYNERGISTIC SOFTWARE,
5221 120 AVE. S.E., BELLEVUE, WA 98006. WA RESIDENTS ADD 5.3% SALES TAX

Did you read about the Dungeonmaster who became so enchanted playing a real life version of Dungeons and Dragons that he disappeared for a month?

You'll be able to hold on to reality just a little better when you play the Dunjonquest™ computer version, the greatest of all the role-playing fantasies.

But don't bet on it.

Sit at your computer. You're the hero. Enter the Dunjonquest "Temple of Apshai" and into the greatest fantasy adventure you've ever experienced. The Temple has over 200 rooms and catacombs in which lurk more than 30 kinds of monsters and beasts ready to do you in—in real time—before you can reach any of the 70 or so treasures waiting for the hero. You may spend days, weeks, months... the rest of your life... striking at the forces of evil, or running from them, or calling on powers you can never completely understand. Always, always demonstrating in varying degrees your strength, constitution, dexterity, intelligence, intuition, the force of your ego.

Unlike chess or bridge or monopoly, this role-playing game—like other good role-playing games—is an **experience** rather than a game: it is not played so much as it's lived or experienced. Your alter ego goes forth into the world of demons and darkness, dragons and dwarves. Your character will do whatever you want him (or her or it) to do.

Actual photo of screen during a Dunjonquest game. In Room 3 in the Temple of Apshai, our hero observes two treasures unattended by dragons, monsters or demons... for the moment. He is completely free of wounds; he is not at all fatigued. He carries 44 pounds of armor and 19 arrows in his quiver. He has already slain five demons. Will he capture the treasures before moving on... or before the forces of darkness intercept him?

"The Temple..." comes complete with a superbly illustrated 56-page rule book and cassette program, designed to operate with the Level II 16K TRS 80, the PET 32K or the Apple II 48K (Applesoft) computer. Only \$24.95 complete, **including** shipping and handling on orders placed within the next 30 days. (Apple or TRS 80 disk available for \$29.95).

Dunjonquest's "The Temple of Apshai" is **guaranteed** to be the best version of Dungeons and Dragons/Dragons and Dungeons. It's a product of the two guys who **are** Automated Simulations: Jim Connelley and Jon Freeman. Jim is a Dungeon Master, running continuous D & D campaigns. He's been a data processing professional with Westinghouse, GTE, Sylvania, Logisticon... an expert in computer-based math-modeling and in simulation of complex phenomena. Jon is a game player, designer and author. He's a frequent contributor to *Games* magazine; his book, "The Playboy Winner's Guide to Board Games" is a paperback best-seller.

As we said, **guaranteed**: Guaranteed to be the best version; guaranteed that you'll be happy with it. Order now, use it for two weeks. If you don't enjoy completely this fantasy adventure experience that goes beyond all others, send it back to us. We'll refund your money in full; no questions asked.

Master Charge or Visa card holders: charge "The Temple of Apshai" to your credit card. Just call our toll free number: (800) 824-7888, operator 861 (In California, call operator 861 (800) 852-7777. In Hawaii and Alaska, operator 861 (800) 824-7919) and you can begin enjoying your Dunjonquest game in days. Or send your check for \$24.95* (or \$29.95)* to

The SY6516 Pseudo-16 Bit Processor

While the 6502 is a great microprocessor as it stands, advances are being considered to make it even better. One of the approaches is to add some new capabilities such as some 16 bit operations, improved addressing, and more.

Randall Hyde
12804 Magnolia
Chino, CA 91710

For those of you who may have wondered what the 6502 equivalent of the MC6809 would be, wonder no longer. Synertek is almost ready to ship the SY6516.

Synertek announced the 6516 almost a year ago, but due to production problems, it never quite made it. The 6516 was designed by Atari Inc. (back then it was to be called the 6509) for use with the Atari 400 and 800 computer systems. Unfortunately, Synertek was unable to deliver the chip in time for Atari to use it in their computers.

What is a Pseudo 16-bit Computer?

A pseudo 16-bit computer uses an internal 16-bit register arrangement, but externally it uses an eight bit bus. Sixteen bit data is multiplexed in, much like the Alpha Micro computer on the S-100 bus. In addition to the new 16-bit instructions, the 6516 maintains all of the 8-bit instructions of the 6502. You may reassemble your source files currently on the 6502 and run them directly on the 6516. All the information that I have received says that the 6516 is SOURCE code compatible with the 6502 and that it is OBJECT code incompatible with the 6502. I have heard rumors that Synertek is attempting to make the 6516 object code compatible, but quite honestly, I don't believe there is much chance of it happening.

Unlike the Motorola MC6809, which has a distinct set of 8-bit instructions and a distinct set of 16-bit instructions, the SY6516 contains a special register (the "Q" register) which toggles the system back and forth between 8-bit operation and 16-bit operation. In addition, all registers in the 6516 (A, X, Y, and SP) are

now 16-bits wide. The "Q" register contains four bits which may be programmed to put the accumulator in the 16-bit mode, the X-register in the 16-bit mode, the Y-register in the 16-bit mode, and memory in the 16-bit mode (for use with INC, DEC, ASL, ROL, ROR, LSR, etc.). If the accumulator is programmed to be in the 16-bit mode, then LDA will load the accumulator with 16-bits, the low order byte coming from the specified address and the high order byte coming from the specified address plus one. If the accumulator is in the 8-bit mode, then the LDA instruction behaves identically to the LDA on the 6502. The other registers (X, Y, and Memory) behave identically.

It does not take twice as long to perform a 16-bit instruction compared to the equivalent 8-bit instruction, as you might expect. Usually only one additional clock cycle is required. This means that 6516 code will run as much as 3 times faster than 6502 code performing the same operation.

In addition, several instructions have been "speeded up" over the 6502 equivalent. For instance, implied instructions now only require one cycle for complete execution (the 6502 requires 2). Several other instructions have been speeded up as well (see Table One).

Variety of addressing modes is what makes the 6502 as flexible as it is. The 6516 includes many more addressing modes in its instruction set. In particular, indirect addressing (without the indexed by Y or preindexed by X), 16-bit relative addressing (there is now a jump relative, so your code can be relocatable), and direct page addressing.

Direct page addressing is something

really special. It is available on the 6502 in a restricted form; on the 6502 it is called zero page addressing. Direct page addressing is different, in that any of the 256 pages in the 6516 address space may be used. The particular page is selected by the 8-bit direct page register "Z". The direct page facility should clear up many problems associated with zero page conflicts occurring in the 6502.

The New Instructions

The 6516 has a total of 114 instructions (compared to the 6502's 56). This gives a total of 255 different opcodes. Some of the new instructions are listed on the next page.

The User Flag

Bit 5 of the P register has been undefined to this point in the 6502. The 6516 utilizes this bit as a user defined flag. Included in the instruction set are instructions to set and clear this flag, as well as branch if set, and branch if clear. This user defined flag will prove to be a great help to users who are writing a boolean function. Up till now, the 6502 programmer had to use the carry or overflow flag. The user defined flag will help alleviate problems associated with the use of the aforementioned flags.

The 6516 instruction set was defined to allow maximum capability with the minimum number of instructions possible. For those of you who would really like to have seen an instruction of the form:

```
JMP (LBL,X)
```

you may simulate this by:

```
LDY LBL,X  
YPC
```

The instruction sequence still requires only 3 bytes (assuming LBL is a direct page reference) and the timing is 7 cycles which is only two cycles more than a straight jump indirect. This would execute just as fast as a JMP (LBL,X) instruction were it included directly in the instruction set.

For those of you who would like to have seen the auto-increment and auto-decrement instructions of the MC6809, once again they can be simulated by the 6516. For instance, the sequence LAX, INX simulates a post increment and INX, LAX simulates a pre-increment. These instructions require two bytes (the same as the 6809) and execute in 3 to 4 cycles (depending on whether you are in the eight-bit or 16-bit mode). This speed is comparable to the 6809.

The only advantage of the 6809 over the 6516 is the 6809 multiply instruction. However, a software multiply on the 6516 should execute fast enough so that it won't make that big a difference.

The addition of two stacks in the 6809 is no real advantage since you can simulate 2, 3 or even n stacks with one 16-bit stack pointer. Those of you writing machine interpreters (such as the UCSD Pascal Pcode interpreter) will be able to simulate a stack machine quite easily on the 6516.

In my opinion, Synertek has taken everything wrong with the 6502 and fixed it, in addition to adding several features which I had not even previously considered. The 6516 is easily the most powerful 8-bit processor available (with due respects to the Intel 8088 which I would rate "almost there"). This opinion, incidentally, is not just my own. EDN rated the 6516 above all the 8-bit processors and even some 16-bit processors, several months ago. If Synertek does indeed make the 6516 processor object code compatible with the 6502, it will definitely make the 6516 something you shouldn't scoff at. Why? Because once this happens, 50,000 APPLE II computers will be upgradeable directly to a 16-bit processor and maintain software compatibility with existing software. Likewise, the 70,000 or so PETs will be upgradeable and the OSI, and the KIM, and of course, the SYM, etc. etc.

The only fault I find with the 6516 is the assembly language mnemonics chosen by Synertek. They should have followed the example laid down by Motorola and used mnemonics which specify the action, leaving the decision of where the data is coming from to the operand field.

I am currently writing a version of LISA (an interactive 6502 assembler for the APPLE II) for the 6516. I will maintain Synertek's syntax, however I will add several extensions to the syntax and in-

struction set to allow a much more regular syntax. This should prove to be a

little more pleasant to the die-hard computer scientist.

The New Instructions

LDS	M->S	(LOAD STACK POINTER FROM MEMORY)

GREAT PET SOFTWARE

"Precise, humanized, well documented an excellent value" are the applauds now being given to United Software's line of software. These are sophisticated programs designed to meet the most stringent needs of individuals and business professionals. Every package is fully documented and includes easy to understand operator instructions.

DATABASE MANAGEMENT SYSTEM - A comprehensive, interactive system like those run on mainframes! Six modules comprising 42K of programming allow you to; create, edit, delete, display, print, sort, merge, etc., etc. - databases of up to 10,000 records. Printer routines automatically generate reports and labels on demand. 60 pages of concise documentation are included. Requirements - 16-32K PET and 2040 Dual Disk (printer optional). . . . **Cost \$125**

ACCOUNTS RECEIVABLE/PAYABLE - A complete, yet simple to use accounting system designed with the small businessman in mind. The United Software system generates and tracks purchase orders and invoices all the way through posting "controlled" accounts payable and accounts receivable subsystems. Keyed Random Access file methods makes data access almost instantaneous. The low-cost solution for the first time computer user with up to 500 active accounts. Requirements - 32K PET, Dual Disk, any 80-column printer. . . . **Cost \$175**

CASH RECEIPTS & DISBURSEMENTS - Makes it a breeze to track all outgoing payments made by any type of business operation. Checks are tracked by number and categorized by type of expense. Sorting, summary, and audit trails make it easy to post to general ledger. This system also categorizes incoming receipts. Uses KRAM file access method. Requirements - 32K PET, Dual Disk (printer optional). . . . **Cost \$99.95**

KRAM - Keyed Random Access Method - The new, ultra-fast access method for the PET Disk, provides keyed retrieval/storage of data, in either direct or sequential mode, by either full or partial key values. Written by United Software in 6502 machine code, and designed with the PET in mind, it exploits all the benefits of the PET Disk, allowing full optimization of your system. Eliminates the need for "Sort" routines! KRAM provides flexibility never seen on a micro before. KRAM is modeled after a very powerful access method used on large-scale IBM Virtual Storage mainframes. So "KRAM" all you can into your PET - it will love you for it. . . . **Cost \$79.95**

(Sublicenses available to software houses.)

The **Cruncher** removes REM statements and compresses code in Applesoft programs. The **Prompter** is a powerful data entry subroutine that can handle both string and numeric data. Options include using commas, decimal points, and leading zeros with right-justified numerics. A maximum field length can be specified to prevent overflow in both numeric and alphanumeric fields. The **Diskette Copy** formats an output disk, copies each track, and verifies that the output matches the input. PLUS FOUR MORE UTILITIES TO AID YOUR OWN PROGRAMMING. Suggested Retail Price for **Dakin5 Programming Aids I** is \$39.95.

The **Copier** copies absolutely any kind of file or program from one diskette to another. The **Variable Cross Reference** produces a cross-reference for all variable names used in an Applesoft BASIC program. The **Line Cross Reference** creates a cross-reference for an Applesoft BASIC program, showing where a given line is referenced by GOTO, GOSUB, THEN, or LIST statements. The **Patcher** allows you to display any sector of a diskette, and then to update any data within that sector. PLUS THREE MORE UTILITIES TO FACILITATE YOUR OWN PROGRAMMING. Suggested Retail Price for **Dakin5 Programming Aids II** is \$49.95.

Each utility package includes a program diskette and very complete documentation. The hardware requirements are an Apple II, 48K of memory, 2 Disk II's, and a printer. Languages are Applesoft/Assembler.

See your Apple dealer or contact Dakin5 Corporation, P.O. Box 21187, Denver, Colorado 80221. Telephone: (303) 426-6090. Dakin5 developed the business application software **The Controller**™ for Apple Computer Inc.

Announcing...

OPTIMIZED SYSTEMS SOFTWARE

UPGRADE YOUR APPLE II[®] WITH A NEW SYSTEMS SOFTWARE PACKAGE

- Unified Operating System
- Disk File Manager
- Commercial Basic
- Editor/Assembler/Debugger
- Data Base Manager

Optimized Systems Software does not use Apple DOS[®]. OSS is a unified and complete systems software package with its own Operating System and File Manager. The Operating System, the File Manager and the Basic combined use only slightly more RAM than Apple DOS[®] alone. Requires 48K Apple II[®] with Disk II.

Operating System

- Byte and Block I/O
- Simple User Interface
- Simple Device Interface
(create your own)

Basic

- Nine Digit Precision DECIMAL Floating Point
- 32K Byte Strings
- Variable Names to 256 significant characters
- I/O Interface Statements
(no PRINT "control-D...")

File Manager

- Open, Read, Write, Delete, Lock, etc.
- Random Access via Note & Point
- File Names of Primary.Ext type

Editor/Assembler/Debugger

- Line Editor
(Edits Basic programs, too)
- Mini Assembler
- Maxi Assembler
- Disassembler
- Step, Trace, etc.

Available NOW at Special Introductory Prices

- Operating System + File Manager + Basic
- Operating System + File Manager + ASM
- Operating System + File Manager + Basic + ASM
- Operating System + Data Base Manager

MICROCOMPUTER MEASUREMENT and

The world we live in is full of variables we want to measure. These include weight, temperature, pressure, humidity, speed and fluid level. These variables are continuous and their values may be represented by a voltage. This voltage is the analog of the physical variable. A device which converts a physical, mechanical or chemical quantity to a voltage is called a sensor.

Computers do not understand voltages: They understand bits. Bits are digital signals. A device which converts voltages to bits is an analog-to-digital converter.

Our AIM 16 (Analog Input Module) is a 16 input analog-to-digital converter.

The goal of Connecticut microComputer in designing the uMAC SYSTEMS is to produce easy to use, low cost data acquisition and control modules for small computers. These acquisition and control modules will include digital input sensing (e.g. switches), analog input sensing (e.g. temperature, humidity), digital output control (e.g. lamps, motors, alarms), and analog output control (e.g. X-Y plotters, or oscilloscopes).

Connectors

The AIM 16 requires connections to its input port (analog inputs) and its output port (computer interface). The ICON (Input CONnector) is a 20 pin, solder eyelet, edge connector for connecting inputs to each of the AIM16's 16 channels. The OCON (Output CONnector) is a 20 pin, solder eyelet edge connector for connecting the computer's input and output ports to the AIM16.

The MANMOD1 (MANifold MODule) replaces the ICON. It has screw terminals and barrier strips for all 16 inputs for connecting pots, joysticks, voltage sources, etc.

CABLE A24 (24 inch interconnect cable) has an interface connector on one end and an OCON equivalent on the other. This cable provides connections between the uMACSYSTEMS computer interfaces and the AIM 16 or XPANDR1 and between the XPANDR1 and up to eight AIM 16s.

XPANDR1

The XPANDR1 allows up to eight Input/Output modules to be connected to a computer at one time. The XPANDR1 is connected to the computer in place of the AIM16. Up to eight AIM16 modules are then connected to each of the eight ports provided using a CABLE A24 for each module. Power for the XPANDR1 is derived from the AIM16 connected to the first port.

Analog Input Module

The AIM 16 is a 16 channel analog to digital converter designed to work with most microcomputers. The AIM16 is connected to the host computer through the computer's 8 bit input port and 8 bit output port, or through one of the uMAC SYSTEMS special interfaces.

The input voltage range is 0 to 5.12 volts. The input voltage is converted to a count between 0 and 255 (00 and FF hex). Resolution is 20 millivolts per count. Accuracy is $0.5\% \pm 1$ bit. Conversion time is less than 100 microseconds per channel. All 16 channels can be scanned in less than 1.5 milliseconds.

Power requirements are 12 volts DC at 60 ma.

The POW1 is the power module for the AIM16. One POW1 supplies enough power for one AIM16, one MANMOD1, sixteen sensors, one XPANDR1 and one computer interface. The POW1 comes in an American version (POW1a) for 110 VAC and in a European version (POW1e) for 230 VAC.

TEMPSENS

This module provides two temperature probes for use by the AIM16. This module should be used with the MANMOD1 for ease of hookup. The MANMOD1 will support up to 16 probes (eight TEMPSENS modules).

Resolution for each probe is 1°F .

MICRO SUBSCRIBERS SPECIAL

THANK YOU, COMMODORE...

Just about a year ago, Skyles Electric Works introduced a 15 inch wide keyboard with all PET functions on nice, plump, full-sized keytops with torsion spring action. S.E.W. knew that most owners of the PET 2001-8 couldn't remain happy with the undersized keytops and unsatisfactory spring action.

Now you have announced that, effective in January of 1980, all PETs and CBMs would feature full sized keyboards.

So, thank you, Commodore, for confirming that S.E.W. was right all along.

Meanwhile, S.E.W. hasn't been resting...and now offers with the **Big KeyBoard** an 18 inch ribbon cable at no extra charge...and a cassette tape containing BASIC and machine language programs that convert the **Big KeyBoard** to ASCII or typewriter operation, including lower case characters, and upper case through the shift key. Even a shift lock, quotations in the proper place, numbers across the top row.

*All keytops double shot for lifetime durability. Switching action uses gold cross-point contacts; torsion springs are gold plated. Housing is black heavy gauge aluminum. Entire unit can be rinsed to clean under water and left to dry. 120 day warranty. Only \$125.00**

MICRO SUBSCRIBERS SPECIAL TILL MAY 15, 1980 \$99.50*

Wouldn't You Love Your PET 2001-8 Even More With the Skyles Big KeyBoard?

Enclosed is my MICRO address label showing subscription number, please send ___Big KeyBoard(s). Enclosed is a check \$____*. Charge my VISA, Mastercharge (circle one) #_____ Expires_____

PET Keysort

One of the most useful operations to perform on a real data base is a keysort. On the PET, due to some problems in the 'garbage collection' procedures, sorting string arrays can become very time consuming. A complete, general purpose keysorting program is presented which has many useful features and is efficient.

Rev. James Strasma
120 West King Street
Decatur, IL 62521

One of the most needed features of any business database program is a good sort routine. On the PET computer, there is also a real need for a way to sort string arrays without changing the strings. This is due to a quirk in the PET's "garbage collection" routine. PET was designed so every time a string is changed, a new string is created. Old versions are erased only after memory is filled. Then it deletes all the unneeded strings at once. As string space increases, collection time increases dramatically. With 24K of strings in memory, it can take several minutes.

Until future ROM's speed this process, it is best to avoid unneeded string manipulations. This makes a different sort program essential. For example, in an attendance program I developed, a heapsort is used. The heapsort itself takes about 20 minutes to sort 500 records. However, garbage collection adds another 2 hours! Clearly this is unacceptable.

One solution would be to define another array of integer string pointers, and sort that array. This would avoid moving strings entirely. As it happens, BASIC already stores its strings that way. Each string array is a table or pointers to another array of the actual strings. The pointers are above the program in memory, at the end of the variables. The strings are usually at the top of memory, though they may be anywhere.

I wrote a 'pointer sort' using the pointer table. It worked, but took too much memory, and had to be part of each program using it. I decided to put it in machine language instead. In the final form, it uses just under 1K of memory, at the top of memory. It resets BASIC's top of memory pointer to protect itself from

BASIC, and saves a copy of PET's zerobase to protect basic from the program. The other main features of KEYSORT, are as follows:

1. extreme speed
2. simple operation
3. has defaults for all options
4. works with BASIC arrays
5. Remains until PET is reset
6. accepts any number of fields within a string
7. sorts any specified string array in memory
8. accepts any character as a field marker
9. both strings and fields may individually vary in length
10. extensive error ckecking

The two BASIC demonstration programs will illustrate these features. Listing #1 creates an array of random strings to sort. It does 3000 names in 28 seconds. Once you create an array to sort, merely enter 'sys(31841)' to sort it, either directly or from a program. Later, when you are ready to sort on an array other than the first in memory, try out listing #2. It uses all of KEYSORT's options at once. First, it selects the 'a\$' array as the one to sort, ignoring all other arrays. Second, it selects the '▼' character as the marker between fields. Using a marker allows one string to hold about 128 separate fields at once. The array may be instantly resorted on any of these fields, as shown in sample run #2, which sorts on field #4, actually the fifth field, since there is a field #0.) You may sort by name one minute, by birthdate the next and by zip code after that.

There is no need for strings to have a fixed length. Nor is there any need for fields within strings to be any special

length. This avoids any waste of array space. KEYSORT's default field marker is the [tab] character, chr\$(9). This is easily changed, as shown in listing #2. Also there need not be any end of field marker unless you select one. Listing #1 works fine without fields. If time is very important to you. Note that using fields doubles the sort time. In return, it allows you to maintain a single data base, for several programs, and sort only the fields needed by the particular program currently in use. That saves a lot of typing time.

When you study the assembly source listing of KEYSORT, you will note a subroutine called 'spg'. This is a routine any 6502 owner can use to save up to half of zero base. By placing it at the end of the normal program flow, it only has to be called once, and its ending 'rts' then returns to BASIC.

After you assemble and save a copy of KEYSORT, call it without any arrays in memory. You will immediately see:

```
?array error  
ready
```

This is KEYSORT's error message. Here it means no array was found. However, in the process, it reset Himem to protect itself from BASIC. You should do this each time you load KEYSORT, before defining strings. Otherwise they will overwrite the program. Note that if another program has already moved Himem lower than KEYSORT needs, the program leaves it alone.

If you see the '?array error' message at other times, one of several things has gone wrong. Perhaps there is no array to sort, ie. you cleared the variables. Or maybe the array has more than one

dimension—only one is allowed. (Unsorted arrays may have all the dimensions you wish.

Then again, you may have erred in poking in KEYSORT: that becomes the default for future sorts. Note that at the end of listing #2, the seven command locations are reset to zero. Unless the next sort uses the same KEYSORT features or more, you will need to zero those functions not desired in the next sort.

Both the assembly listing and the hex dump of KEYSORT here are for a 32K PET. However, the program is easily relocatable. There is no data in the body of the program, and the program does not change itself. To relocate it, merely change all of the high order bytes of 3 byte instructions, except for the one that jumps to \$C357 at \$7 of 8. This is a call to the new ROM's error message printer. Table #1 shows all the locations to change for relocation at the top of all PET model's memory. If you have an 'old ROM' PET, (8K '79 or earlier vintage), you will need to make the changes listed in table -2. You will also be limited to 256 element arrays, as the old ROM's couldn't handle more elements than that at once.

Other 6502 users with Microsoft may be able to adapt KEYSORT to their needs. My local 6502 group is converting it to the Apple, which uses a similar memory structure. It may help you to know how PET stores arrays. Each array starts with 7 housekeeping bytes. The first byte of the first array's housekeeping is addressed by 'aras' in BASIC (\$2c-2d,) low and high.) The last array ends just before the address in 'eara', (\$2e-2f). The first 2 housekeeping bytes in each array contain its name. If it is a string array, \$80 will be added to the second character of the name as a flag. Even if there is no second character, byte 2 will contain \$80. Bytes 3 and 4 are the low and high bytes of the offset from the start of the current array to the start of the next one. Byte 5 is the number of dimensions in the array, 1-3. Bytes 6 and 7 are the HIGH and low bytes respectively of the number of elements in the array. (This is backwards from the usual 6502 format.) There will be 1 more element than in the DIM statement, as the 0th element counts too. The 0th element begins immediately after the housekeeping bytes. Each element consists of 3 bytes. The first is the length of the string. The other 2 are the low and high bytes long. Also, when first dimensioned, all the length bytes and address bytes are set to zero.

I won't try to fully explain the BASIC and assembly listings of KEYSORT; they are fully commented. The only unusual feature in the BASIC programs is the use of PET's built-in 60th of a second jiffy clock, T1. When entering the assembly source, save \$3500 for the text file and

\$0200 for labels. If you have less room available, delete some comments.

If you have questions about KEYSORT, or need help, write me at the above address. Please include a stamped reply envelope. If you want a custom tape copy of KEYSORT, please send along \$5 for my time. Also, specify the starting or ending address you wish, and which ROM set you have.

Table 1: Locations to change on relocation

CUSTOM PROGRAMMING

We specialize in custom software. Modifications to existing programs or completely specialized to suit your needs. Write for details.

**Decision
Systems**

*Presenting the Other Side of the Apple II**

ISAM-DS An integrated set of routines for the creation and manipulation of indexed files. Retrieve records sequentially by key value or partial key value. Files never have to be reorganized.
Requires: Disk, Applesoft (32K ROM or 48K RAM)
\$50

PBASIC-DS A sophisticated preprocessor for structured BASIC. Gain the power of PASCAL-like logic structures at a fraction of the cost. Use all regular BASIC statements plus 14 commands and 9 new statements/structures (WHILE, UNTIL, CASE, etc.) Works with INTEGER or APPLESOFT programs.
Requires: Disk, Applesoft (32K ROM or 48K RAM)
\$35

UTIL-DS An Applesoft utility package that includes improved error interrupt handling (return to the statement following the one in error), a routine that selectively clears array variables (for reDIM or chaining), an interface routine that provides a 'GOSUB' facility from machine language to Applesoft and an advanced formatting routine for printing numeric values. Works with negative values; inserts commas in value, etc. Also contains a loader to put the routines into RAM with your program.
Requires: Disk, Applesoft (ROM of RAM)
\$35

IT'S EASY TO ADD VIDEO TO YOUR SYSTEM

VIDEO PLUS™

VIDEO PLUS is the most versatile expansion board offered for the ASK family of micro-computers. It has many important features:

- Programmable Display Format with up to 80 characters by 24 lines.
- UPPER and lower case ASCII characters in ROM.
- Optional Programmable Character Generator with up to 128 additional user defined characters.
- Onboard Display RAM adds up to 4K bytes of RAM to your system as display memory.
- Provision for 2K EPROM memory for the ASK VIDEO PLUS Software or other support programs.
- Keyboard Interface supports an ASCII keyboard.
- Smart Video Controller supports hardware scrolling, programmable cursor, light pen, programmable video format,
- ASK VIDEO PLUS Software provides a complete control package for the AIM, SYM, and KIM. Works with the AIM/SYM Monitor, Editors, BASIC, and any program using the I/O vectors.
- Single Voltage only + 5V @ 1.5 Amps.

WE ARE LOOKING FOR A FEW GOOD COMPUTERISTS:

6502 PROGRAMMERS
TECHNICAL WRITERS
JUNIOR ENGINEERS
SENIOR TECHNICIANS

DATA CAPTURE 3.0

Is DATA CAPTURE just another smart terminal program for your Apple II[™] or Apple II Plus[™]?

NO. It is a GENIUS TERMINAL PROGRAM and is designed to be used with the Micromodem II[™].

Tired of watching data and programs scroll off the screen forever? Then DATA CAPTURE is the program for you.

- ANYTHING that appears on the screen of your Apple II can be captured. Any program or data.
- You can then save what you have captured to disk, dump it to your printer or even do simple editing with DATA CAPTURE.
- You can use DATA CAPTURE to compose text offline for later transmission to another computer. Think of the timeshare charges this will save you.
- Use DATA CAPTURE with the Dan Paymar Lower Case Adapter and you can enter lower case from the keyboard for transmission to another computer or capture both upper and lower case.
- A program is also included to convert your programs to text files for transmission using DATA CAPTURE.
- You receive two versions of the program. One is for upper case only and one for both upper and lower case use with the above adapter.

DATA CAPTURE will save you money if you are using a timesharing system because you can compose messages offline for later transmission. You can also quickly capture data for later reading, printing or editing. Requires DISK II[™], APPLESOFT II[™].

Price \$29.95

If your local dealer does not have DATA CAPTURE then order directly. We ship DATA CAPTURE within 3 working days of receipt of order and welcome your personal check. We also accept Visa and Master Charge. Add \$49.95 if you would also like to order the Dan Paymar Lower Case Adapter at the same time.

Ask for a catalog of our software.

KIM Scorekeeper

Always on the lookout for new applications for the basic KIM-1, a general purpose, multi-player scorekeeper is presented. The techniques can be readily modified for use on a SYM-1 or AIM 65, and the scorekeeping function can be included as part of larger game programs.

Joel Swank
4655 SW 142nd, 186
Beaverton, OR 97005

Ever have a problem getting someone to keep score for your friendly game of Hearts? Well KIM would like to be a volunteer. KIM will keep up to nine separate scores for you to display and update from the keyboard. Each player can have from 0 to 9999 points, sufficient for most card games or other games needing a scorekeeper. Bridge fans can drop the low order zero from their scores (150 points for a grand slam??). I must credit the idea to a hardware project in October *Popular Electronics* by Joseph Fortuna. He used decade counters and 7-segment LED drivers to two-digit scores. A telephone dial was used to increment to counters. I immediately saw a job that KIM could do with software. Naturally with all the power of KIM available I had to improve and expand the idea.

The KIM SCOREKEEPER uses nine 2-byte memory registers to save the players' scores. Normally one of the players' scores is displayed continuously in the KIM display. The high order digit of the display is the player number, 1 to 9. The next digit is blank and the four low order digits contain that player's score. To display another player's score the PC (Player Change) key is pushed and the display goes blank. Then a number from 1 to 9 is pushed to get that player's score in the display. After a player is selected, the score can be updated. A player's score can be increased by entering the number to be added to the score and pushing the 'E' (Enter) key. Up to four digits can be entered. During entry of a number, the display shows the number being entered in the four low order digits with the two high order digits blank. Digits are shifted through the display as they are entered. If more than four digits are entered, the high order digits are shifted out and lost as in the KIM monitor.

The player's score can be decreased by pushing the 'D' (Decrease) key to set subtract mode. When the subtract mode is in effect, any number entered will be subtracted from the player's score when the 'E' key is pushed. The high order digit of the display will show a minus sign when the number being entered is to be subtracted. Subtract mode stays in effect until the '+' key is pushed to reset the program to add mode. The '+' and 'D' keys are effective anytime except when performing the player change function. If any key except 0 to 9, '+' or 'D' is entered during the update operation the display returns to the current player. The 'C' (Clear) key may be used to zero the current player's score.

As shown by the programs, SCOREKEEPER has two main display loops. One displays the current player and his score while waiting for a command from the keyboard. The other displays the number being entered while inputting digits from

the keyboard. The code is divided into subroutines for the sake of modularity and readability. The KIM subroutine GETKEY is used for communication from the keyboard, and the HEX to 7-segment conversion table in the KIM ROM is used to generate characters. The display is driven directly by the subroutine DISSEG. DISSEG is more flexible than the KIM subroutine SCANDS since it allows individual control of each segment of the KIM display. Thus any pattern can be displayed. DISSEG reads data from memory at SEGBUF and dumps it directly to the KIM display high order digit first. This subroutine could be used in a wide variety of games for KIM.

KIM SCOREKEEPER is an example of KIM's ability to replace and improve a hardware gadget. There is nothing I like more than finding a hardware function that KIM can replace with software. Someday I will calculate the weight of the hardware that my KIM has displaced.

```

April Fools On Us

We fear that a second class mail bag full of issue 21 may have been lost by the US Postal Service. If you live in the Arkansas, Louisiana, or Georgia area and did not receive your copy of MICRO, 21, please let us know.

The Age of Affordable Computing Has Arrived.

HAVE YOU ?

\$12,900

The C3-B

OHIO SCIENTIFIC Challenger Series

World's largest line of microcomputers for Personal and Business Use. There's one for every budget. And it grows with you, too.

C1P: \$349!

THE ALL-IN-ONE HOME FINANCIER, CALCULATOR, TEACHER, & VIDEO GAME MAKER AT THE WORLD'S LOWEST PRICE!

Ohio Scientific's Challenger 1P is the easy-to-use home computer. It does a lot more for a lot less! Just connect it to your TV* and a cassette player. That's all there is to it. There's nothing to build.

You can create your own personal programs. Or select from a whole library of programs on low-cost cassettes. Everything from teaching arithmetic to spectacular video games to balancing your checkbook. Something for every member of your family.

CHALLENGER 1P

*uses inexpensive TV adapter (not included)

NOW YOUR APPLE II CAN PERFORM JUST LIKE THE BIG BOYS

If you're a businessman who demands ultimate performance from your Apple II, then take a look at this outstanding General Ledger Package from Small Business Computer Systems (SBCS).

It features

- 6 digit account numbers
- 31 character account name.
- Ten levels of subtotals — giving you a more detailed income statement and balance sheet.
- Departmentalizing . . . up to nine departments.
- Flexibility — adaptable to any printer and either cash or accrual accounting methods.
- Cash Journal allows a 33 character transaction description and automatically generates the appropriate offsetting entry.
- You can print the balance sheet and income statement for the current month, current quarter, or any of the previous three quarters. This year's or last year's totals are also included on the income statement. Or a special report that lists the current account balance for selected accounts.
- Higher number of entries from an external source — as many as 1,000 per session.
- No limit on entries — giving you the opportunity to make your entries as many times or as often as you want.
- With high speed printer routines and other special features of our conversion, processing performance does not decrease dramatically at the system limits.
- Look at these examples of times required to update the chart and print the audit trail.
 - With 133 item chart of accounts, 700 postings into 70 regular accounts: less than 20 min.
 - With 133 item chart of accounts, 1000 postings into 70 regular accounts: less than 30 min.
 - With 210 item chart of accounts, 1000 postings into 125 regular accounts: less than 40 min.
- Coming early this year — capability to archive up to 2,500 postings. The chart of accounts will also be archived to maintain the opening balance for the archive period.

In the final analysis, your financial statements are what this General Ledger is all about. And with this General Ledger Package you can format your own balance sheet and income statement. As well, department financial statements may be formatted differently. You have complete freedom to place titles and headings where you want them, skip lines or pages between accounts and generate subtotals and totals throughout the reports — up to ten levels if you need them.

And coming early in 1980, SBCS will present the Accounts Payable/Accounts Receivable Package you have been waiting for.

Just compare these numbers against any package on the market today:*

	5 inch disc	8 inch disc
Vendors or customers	700	1,800
Payable Transactions	350	750
Payable Invoices	380	840
Receivable Transactions	600	1,300
Receivable Invoices	600	1,300

* These are maximum numbers that you can put on a disc if you're using the disc only for these respective data files.

We are an authorized converter for Osborne/McGraw-Hill, providing you with business packages that will do everything the Osborne General Ledger will do in addition to many features we have added.

KIM/SYM/AIM-65—32K EXPANDABLE RAM DYNAMIC RAM WITH ON BOARD TRANSPARENT REFRESH THAT IS COMPATIBLE WITH KIM/SYM/AIM-65 AND OTHER 6502 BASED MICROCOMPUTERS.

ASSEMBLED/ TESTED	WITH 32K RAM	\$419.00
	WITH 16K RAM	\$349.00
	WITHOUT RAM CHIPS	\$279.00
	HARD TO GET PARTS ONLY (NO RAM CHIPS)	\$109.00
	BARE BOARD AND MANUAL	\$49.00

- PLUG COMPATIBLE WITH KIM/SYM/AIM-65. MAY BE CONNECTED TO PET USING ADAPTOR CABLE. SS44-E BUS EDGE CONNECTOR.
- USES +5V ONLY (SUPPLIED FROM HOST COMPUTER BUS). 4 WATTS MAXIMUM.
- BOARD ADDRESSABLE IN 4K BYTE BLOCKS WHICH CAN BE INDEPENDENTLY PLACED ON 4K BYTE BOUNDARIES ANYWHERE IN A 64K BYTE ADDRESS SPACE.
- ASSEMBLED AND TESTED BOARDS ARE GUARANTEED FOR ONE YEAR, AND PURCHASE PRICE IS FULLY REFUNDABLE IF BOARD IS RETURNED UNDAMAGED WITHIN 14 DAYS.
- BUS BUFFERED WITH 1 LS TTL LOAD.
- 200NSEC 4116 RAMS.
- FULL DOCUMENTATION

PET INTERFACE KIT \$49.00

CONNECTS THE ABOVE 32K EXPANDABLE RAM TO A 4K OR 8K PET. CONTAINS EXPANSION INTERFACE CABLE, BOARD STANDOFFS, POWER SUPPLY MODIFICATION KIT AND COMPLETE INSTRUCTIONS.

6502, 64K BYTE RAM AND CONTROLLER SET
MAKE 64K BYTE MEMORY FOR YOUR 6800 OR 6502. THIS CHIP SET INCLUDES:
 * 32 MK4116-3 16KX1, 200 NSEC RAMS.
 * 1 MC3480 MEMORY CONTROLLER.
 * 1 MC3242A MEMORY ADDRESS MULTIPLEXER AND COUNTER.
 * DATA AND APPLICATION SHEETS. PARTS TESTED AND GUARANTEED.
\$295.00 PER SET

16K X 1 DYNAMIC RAM
THE MK4116-3 IS A 16,384 BIT HIGH SPEED NMOS, DYNAMIC RAM. THEY ARE EQUIVALENT TO THE MOSTEK, TEXAS INSTRUMENTS, OR MOTOROLA 4116-3.
 * 200 NSEC ACCESS TIME, 375 NSEC CYCLE TIME.
 * 16 PIN TTL COMPATIBLE.
 * BURNED IN AND FULLY TESTED.
 * PARTS REPLACEMENT GUARANTEED FOR ONE YEAR.

ACTION, STRATEGY, AND FANTASY for the **SERIOUS** games player and his **APPLE II**

Brain Games - 1 demands ingenuity.

Two players bombard radioactive material with protons and electrons until it reaches critical mass and sets up a **Nuclear Reaction**. **Dodgem** requires you to outmaneuver another player to get your pieces across the board first. **Dueling Digits** and **Parrot** challenges your ability to replicate number and letter sequences. **Tones** lets you make music with your Apple (16K) CS-4004 \$7.95. **Strategy Games** and **Brain Games** are on one disk (16K) CS-4503 \$14.95.

Strategy Games - 1 keeps games players in suspense.

You and your opponent trail around the screen at a quickening pace attempting to trap each other in your **Blockade**. A 7 category quiz game will certify you as a **Genius** (or an errant knave!). Beginners will meet their master in **Checkers**. **Skunk** and **UFO** complete this classic collection (16K) CS-4003 \$7.95

Know Yourself through these valid self-tests.

Find out how your life style effects your **Life Expectancy** or explore the effects of **Alcohol** on your behavior. **Sex Role** helps you to examine your behavior and attitudes in light of society's concept of sex roles. **Psychotherapy** compares your feelings, actions, and phobias to the population's norms and **Computer Literacy** tests your microcomputer savvy. A fun and instructional package (16K) CS-4301 \$7.95. **Know Yourself** and **CAI Programs** are on one disk (16K) CS-4503 for \$14.95

IMAGINE

THINK

You're in command in Space Games - 1.

Maneuver the TIE fighters into your blaster sights and zap them with your lasers to save the rebel base camp from annihilation in **Star Wars**. **Rocket Pilot** is an advanced real time take off and landing game. High resolution graphics, exploding saucers and sound effects add to the suspense as you repel the **Saucer Invasion**. Finally, a bonus graphics demonstration, **Dynamic Bouncer** (16K) CS-4001 \$7.95. **Space Games** and **Sports Games** are on one disk (16K) CS-4501 for \$14.95

ACTION

Sports Games - 1 puts you in the Apple World Series

Take the field in the **Great American Computer Game**. Mix up your pitches to keep the batter off balance. Move your fielders to snag the ball before he gets to first. Balls and strikes, double plays, force outs, and errors let you play with a realistic strategy. Also in the line up—**Slalom**, a championship downhill ski race, **Torpedo Alley**, and **Darts** (16K) CS-4002 \$7.95. **Space Games** and **Sports Games** are on one disk (16K) CS-4501 for \$14.95

It's easy to order SENSATIONAL SOFTWARE for your Apple II.

Send payment plus \$1.00 shipping and handling in the U.S. (\$2.00 foreign) to Creative Computing Software, P.O. Box 789-M, Morristown, N.J. 07960. N.J. residents add \$1.00 sales tax. Visa, Master Charge and American Express orders may be called in toll free to 800-631-8112 (in N.J. 201-540-0445).

OSI BASIC in ROM

While the various Microsoft BASICs are easy to use, they are difficult to understand due to an intentional lack of documentation. To help understand your OSI BASIC, a table of the locations of the subroutines to service the main commands is presented. The program which generated the table is provided as a starting point for you to explore your BASIC.

E.D. Morris, Jr.
3200 Washington
Midland, MI 48640

A previous article in Micro 18:9 by S.R. Murphy gave a peek into OSI BASIC in ROM by listing a number of scratch pad locations in page zero. In the present article, I wish to delve further into the inner workings of BASIC by explaining the dispatch table.

At the bottom of the BASIC ROMs, between \$A000 and \$A083, is a list of addresses known as the dispatch table. These are the starting addresses of all the machine subroutines needed to carry out the BASIC keywords such as END, FOR, NEXT etc. The addresses are in hexadecimal in the normal machine format of low byte first followed by the high order byte. For example, starting at \$A000 you find the data:

\$A000	39
\$A001	A6
\$A002	55
\$A003	A5

Thus the first two entries in the dispatch table are \$A639 and \$A555. These point to subroutines in the BASIC ROMs.

Now we need to know what each subroutine does. Conveniently there is another table starting at \$A084 containing a list of all the BASIC keywords. The first entries in this table are:

\$A084	45
\$A085	4E
\$A086	C4
\$A087	46
\$A088	4F
\$A089	D2

Except for the C4 and D2, the data looks like ASCII code. If the high order bit

is removed from C4 and D2, then it is ASCII code for ENDFOR. You can demonstrate the list of keywords for yourself by running the program:

```
10 FOR X=41092 TO 41315
20 Y=PEEK(X)
30 PRINT CHR$(Y);
40 NEXT
```

If you have the OSI graphics character generator, the last letter of each word will be a graphics character instead of a letter. The high bit being set is used to separate the entries in the word list. To convert these to letters and leave a space between key words, add the following line to the above program:

```
25 IF Y > 127 THEN PRINT
CHR$(Y-128);:Y=32
```

Now we have two lists, one of addresses and one of functions. These can be combined to give an address for each function.

END	\$A639
FOR	\$A555

However things are not quite that simple. Unfortunately the two tables are not strictly in the same order. Also some of the address entries refer to the subroutine location and others to the location, less one. The address table is further complicated in the case of the arithmetic operators by a third entry which is the precedence value.

Following is a BASIC program that sorts out these quirks and outputs a list of BASIC KEYWORDS together with the hex address of the machine code

associated with that keyword. Notice that the program does not contain data statements, rather PEEK's directly at your BASIC ROM's. The program steps through the dispatch table printing out each address. The value of Q is added to each address and is either 1 or 0. The correct keyword is found by PEEKing at D until a character is found with the high bit set.

The subroutine at line 500 converts a binary word into ASCII digits for printing.

For those of you who have trouble with this program or for those who have a sore index finger from typing in that 24K game program, I am providing an output listing. However I urge you to run it yourself to prove all this stuff is really "in there." The BASIC program also contains information about the location and structure of the two tables.

Looking at the sample run, the addresses for END and FOR found earlier, are incorrect by one byte. Users of the USR function know that the subroutine address must be placed at \$000B and \$000C. The dispatch table associates location \$000A with the USR function. Location \$000A contains 4C or JMP which completes the three byte instruction.

It is interesting to note that the BASIC keyword table is identical to a numerical listing of the BASIC tokens(MICRO 15:20). The keywords TAB, TO, THEN, and STEP are missing from the dispatch table. However these commands are never used alone but always occur with another BASIC keyword (PRINT, FOR, IF and FOR-NEXT). The purists will note the absence of AND, OR, GREATER, LESS

and EQUALS. I must confess, these did not fit neatly into my BASIC program.

If you have ever tried to make sense of "that 8K block of data up there at \$A000," it looked like a hopeless task. With the dispatch table at hand, you can break it down and attack one function at a time.

These subroutines are available to use if you are into machine code programming. Mr. Murphy is wrong: OSI users are not disinclined to explore their machines. The problem, until now, has been that too lit-

tle information was available. So let's dig into OSI's BASIC and publish a complete memory map similar to those already out for the PET and APPLE.

01824

Said the Toolkit to the Word Processor: "You're in My Space!" Said the Word Processor to the Toolkit: "Let's Share...here's

Socket 2 Me™!"

From the original producer of peripherals exclusively for PET lovers everywhere . . . the device that allows you to select between the BASIC Programmer's Toolkit and the Commodore Word Processor II while they occupy the same address space.

The **Socket 2 ME** . . . doubles your memory expansion in a single socket. It's a 2.5" x 2.75" board that fits neatly into the Toolkit/Word Processor socket on the main logic board of all *new* PETs. Then both the Word Processor and the Toolkit plug into the **Socket 2 ME**.

A miniature slide switch — part of the kit — mounts with double-stick tape (supplied) to the front part of the right side of the PET base, almost hidden by the overhang of the top of the PET cabinet. The slide switch is connected to the **Socket 2 ME** by a special cable (also supplied) . . . and you're up and running.

Up and running; installation took only a minute or so. Flip the switch from Toolkit to Word Processor. And back. No need to open the PET.

Complete with the first-rate installation and operating instructions you've come to expect from all Skyles documentation.

YOU HAVE AN ORIGINAL 2001-8 PET?

No problem. The **Socket 2 ME** interfaces with the BASIC Programmer's Toolkit model TK 160E or TK 160S connector board, the Word Processor II interfaces with the **Socket 2 ME**, the slide switch is placed on the PET base. Then, as long as the PET 2001-8 has at least 8K of memory expansion, the system is up and running.

YOU HAVE A COMPUTHINK DISK AND YOU WANT A BASIC PROGRAMMER'S TOOLKIT?

How would you like to switch between the Computhink and the Toolkit with a single SYS command?

Just add two small jumpers to the Computhink system and a short program to the DOS diskette. Plug in the BASIC Toolkit TK 80E, enter the **SYS** command and your system is up and running.

NO ROOM ON THE PET 2 COMPUTHINK DISK BOARD?

All your sockets are booked? Fret not; Skyles comes to the rescue. **Skyles Electric Works** now has a modified EPROM board available with sockets for the Toolkit and Computhink ROM chips. Plug in the ROMs, add a jumper (supplied) to the PET 2 Computhink disk board, plug the new EPROM board into the Computhink disk board. Power up and enter a short switching program into the DOS diskette. Switch between the Computhink disk and the Toolkit with a single **SYS** command.

ORDER NOW — with Skyles' 10-day money-back guarantee:

Socket 2 ME: \$22.50*
Commodore Word Processor II: \$100.00*
Commodore Word Processor III: \$200.00*

BASIC Programmer's Toolkit
Model TK 80ED \$85.00*
Model TK 160ED \$95.00*†

*Add \$2.50 to each for shipping and handling.

†Note: If Computhink EPROM board is returned, after purchase of TK 160ED, Skyles will refund \$20.00.

"Socket 2 ME" is the trademark of Skyles Electric Works.

**MICROBOX AND MICRO-
STIK PROVIDE APPLE
OWNERS WITH THE
HARDWARE TO EXPLORE
THE INPUT/OUTPUT CA-
PABILITIES OF THEIR
COMPUTERS.**

A SIMPLE COMMAND from the Apple keyboard or a Basic Program can switch an external device. Connect AC loads, such as lamps, motors, relays or solenoids directly through the MICROBOX's 4 AC OUTLETS. Loads can range from 0 to 220VAC and draw up to 200 Watts each. Solid State Switching ISOLATES the load from your Apple for complete safety. Four LEDs provide a visual on/off status of each load.

A Complete Instruction/Tutorial Manual is included with the MICROBOX.

REAL-TIME INPUT

The MICROSTIK is a sturdy, two axis joystick. Metal Cable Connectors assure trouble free usage over time, and enable extension cables to be added easily. Use the MICROSTIK to add real-time input to your game, graphic or experimental programs. Each MICROSTIK contains a PUSHBUTTON for added input possibilities.

MICROBOX and MICROSTIK sit comfortably on, or aside the Apple Computer. They have been designed to match the Apple in color and design.

CJM
INDUSTRIES

Dear MICRO magazine,

My Dad and I have had an APPLE II for about 9 months. During this time I have learned of the special joys and sorrows that only computer people can appreciate or experience. This poem was born out of long hours at the keyboard. I hope you like it and feel that it is worth publishing.

Ode to My Disk

I always see verses praising the Apple
 But who sees the time saved by Disk II, it's ample?
 While Apple sits waiting to digest the data
 That trusty old "breadbox" spins round without-
 breakdown.
 It hasn't been long since I've bought my Disk II
 But I know it's worth it and so do you.
 I tried Panasonics and Hitachis too
 Resetting and loading my Apple I'd do.
 Frustrating it was and my hair I did pull
 So soon I did tire of ERR MEM FULL.
 So now my Hitachi sits dusty and wan
 And softly clicks Disk II, no ERR coming on.

Donna Marie Andert
 Connelly High School
 Anaheim, CA 92801

Dear Editor,

Most articles that are submitted to MICRO are claimed by their authors to execute correctly. The following program has been extensively de-bugged and is guaranteed to run **neither** on a PET **nor** on an OSI microcomputer.

```
10 FOR X=1 TO 10
20 IF X=5 THEN 40
30 NEXT X
40 REM
100 FOR Y=1 TO 10
110 FOR X=1 TO 10
120 NEXT X
130 NEXT Y
READY.
```

Can you figure out what is wrong here? If not, the answer is given in the next column

E.D. Morris, Jr
 Midland, MI 48640

This program was originally part of a 200 line game program with a "small bug." Through a bit of detective work, I narrowed the bug down to these eight lines. In the original game, these lines occurred in widely different sections of the program and appeared not to be related. When the program is executed, the computer will halt indicating "NEXT WITHOUT ERROR IN LINE 130".

This message is most confusing since line 100 clearly contains a "FOR Y". The program will run if lines 100 and 130 are deleted. Something appears to be wrong with the "Y" loop. If "X" is made the outer loop and "Y" is the nested loop, the program will run without error.

This is all a wild goose chase! Nothing is wrong with the "Y" loop. The first real hint of the cause is that replacing the variable "X" in lines 110 and 120 with a different variable, say "Z", solves the problem. The real culprit is line 20 where the program jumps out of a loop before finishing it. It is simple to see here in an eight line program, but not so obvious in a large program. The problem occurs when a variable from an unclosed loop is used again in a nested loop.

The moral of the story is to close loops whenever possible. For example, line 20 could have been:

```
20 IF X=5 THEN Z=X : X=10 : GOTO 30
```

If you can't close the loop, at least avoid using that variable in another loop.

And here is another poem from a reader, sent to us in May, 1979. We hope that he remembered to renew his subscription.

End of Subscription

There once was a town, Albuquerque,
 Wherein lived a genuine turkey
 Who, on learning his MICRO had died,
 Lost what little was left of his pride.
 Hadn't realized how close was the end.
 Still, he took out his pencil and penn'd
 "Mr. Tripp, won't you give me a chance?
 My check will disprove miscreance."

Nelson E. Ingersoll
 Albuquerque, NM 87110

We at MICRO would like to thank Donna, Earl, Nelson and all of our readers for their contributions. While all of the letters that we get are not as entertaining or as fun as these, they all certainly give us some things to think about. We welcome reader input and we encourage you to write to us with your comments, and suggestions at any time. We hope to run the Letterbox column in every issue, but it all depends on what we get from you.

The MICRO Staff

Apple-Doc

By Roger Wagner

An Aid to the Development and Documentation of Applesoft Programs

This 3 program set is a must to anyone writing or using programs in Applesoft! It not only provides valuable info. on each of your programs, but allows you to change any element throughout the listing almost as easily as you would change a single line!!

With Apple-Doc you can produce a list of every variable in your program and the lines each is used on, each line called by a GOTO, GOSUB, etc., in fact, every occurrence of almost anything!

You can rename variables, change constants and referenced line #'s, or do local or global replacement editing on your listing.

In fact, we guarantee that after purchase, if you don't feel APPLE-DOC is one of the most valuable programs in your library we will even refund your money! (Upon return of product.)

Unheard of? Yes! But that's how good APPLE-DOC really is!

That's not all!! Send for free info. or visit your nearest Apple dealer.

Only \$24.95 Please specify diskette or tape.
(Calif. residents add 6% Sales Tax)

Available from your local computer store or:

Southwestern Data Systems
P.O. Box 582-M
Santee, CA 92071
(714) 562-3670

(Dealer inquiries invited)

PET Printer Adapter

CmC's ADA 1400 drives a printer with an RS-232 interface from the Commodore PET IEEE-488 bus. The ADA 1400 is addressable, works with the Commodore disk and prints upper and lower case ASCII.

A PET IEEE type port is provided for daisy-chaining other devices.

A cassette tape is included with programs for plot routines, data formatting and screen dumps. The ADA 1400 sells for \$179.00 and includes a PET IEEE cable, RS-232 cable, power supply, case, instructions and software.

Order direct or contact your local computer store.

VISA AND M/C ACCEPTED—SEND ACCOUNT NUMBER, EXPIRATION DATE AND SIGN ORDER.

STONEWARE for APPLE II*

For the Serious Business or Home User: MICRO MEMO

MICRO MEMO is the first sophisticated "Desk Calendar" program to make good use of your computer's power.

- * Micro Memo includes one time, weekly, monthly, semi-annual and annual reminders.
- * Monthly reminders may be for fixed or "floating" dates (ex. 1st Saturday of every month).
- * Each reminder allows choice of one week, 2 week or 1 month advance notice—reminds you ahead of time to prepare for meetings, purchase tickets, make reservations, etc.
- * Micro Memo includes "shorthand" for fast memo entry, greater capacity.
- * Micro Memo will display or print any day's or week's reminders.
- * Micro Memo is a "perpetual" calendar—automatically creates new months with all appropriate memos (birthdays, anniversaries, monthly meetings, etc.) as past months are dropped—system holds full year's reminders on one disk.
- * Micro Memo "knows" most major holidays.
- * Supports Mountain Hardware clock (optional).
- * "Bomb Proof" menu driven command and data entry.
- * Requires 48K, disk, RAM or ROM Applesoft.

\$39⁹⁵

STONEWARE

P.O. Box 7218, Berkeley, CA 94707
(415) 548-3763

And Just for Fun: TRANQUILITY BASE

TRANQUILITY BASE is a fast high resolution Lunar Lander game by Bill Budge, creator of Apple's "Penny Arcade." TRANQUILITY BASE is just like the popular arcade game, including multiple moonscapes, craft rotation, and zoom in for a close-up view as you approach the Lunar surface.

TRANQUILITY BASE requires 32K and disk.

Available at your favorite computer store or direct from STONEWARE (add \$2 shipping & handling; Calif. residents add sales tax. Visa & MasterCard accepted, no C.O.D.'s).

*: Apple II is a Trademark of Apple Computer, Inc.

The MICRO Software Catalogue: XIX

Mike Rowe
P.O. Box 6502
Chelmsford, MA 01824

Name: **Dakin 5 Programming Aids II**
System: **Apple II**
Memory: **48K**
Language: **Assembler/Applesoft II**
Hardware: **Apple II, 2 Disk II's, and Printer**

Description: Set of seven programs: 1) *Copier*- copies absolutely any kind of file or program from one diskette to another. 2) *Variable Cross Reference*- creates a cross-reference for all variable names used in an Applesoft BASIC program, showing all line numbers where a given variable name is used. 3) *Line Cross Reference*- creates a cross-reference for all referenced lines in an Applesoft BASIC program, showing where a given line is referenced by GOTO, GOSUB, THEN, or LIST statements. 4) *Patcher*- allows the user to display any sector of a given file or program, and then to update any data within that sector. A second option enables the user to specify the particular sector he wishes to update. 5) *Screen Printer* - permits contents of the screen to be sent to the printer at any time the keyboard is active. The program remains in effect until you press RESET or reboot the system. 6) *Array Editor*- a simple word processor that allows you to create, modify, print and save your own text files. 7) *Calculator II*- a multiplication/division subroutine that handles numeric string data. Written in Assembler code, and using twenty place accuracy, it runs much faster than an equivalent BASIC subroutine. It is also compatible with the addition/subtraction subroutine, the Calculator, included in the first Dakin5 Programming Aids package reviewed in the December 1979 issue of The MICRO Software Catalogue XV.

Copies: **Just released**
Price: **\$49.95**
Includes: **Professionally**

Author: bound documentation and program diskette.
Dakin5 Corporation (developer of The Controller for Apple Computer, Inc.)
Available: Local Apple Dealers

Name: **Page Format TTY IN/OUT**
System: **Apple II**
Memory: **300.3FF (256 Bytes)**
Language: **Machine**
Hardware: **Game Conn to TTY**

Description: Program to output to and input from ASK 33 or 35 Teletype. Gives multiple line feeds at end of each page and waits for you to tear off roll paper or insert new sheet for neat listings. Uses game connector.

Copies: **Just released**
Price: **\$2.00**
Includes: Listing and Instructions
Author: **Ken Ellis**
Available: Ken Ellis
R.D.8 Box 344
York, PA 17403

Name: **HI-RES GRAPHIC CHARTS GENERATOR**
System: **APPLE II, APPLE II PLUS**
Memory: **32K without ROM card, 16k with card**
Language: **APPLESOFT II BASIC**
Hardware: **APPLE II, Disk II (allows optional features)**

Description: This program will allow you to generate HI-RES graphic charts, either through keyboard or text file input (if using disk). 'Y' axes will be automatically

scaled with values. 'X' axes will be marked for plotting points. Best of all, once graph is automatically created, you can add your own titles, comments, or symbols anywhere on the graph. Both upper and lower case characters are provided. Over 30 special symbols are included. Provisions are also included for multiple graph overlays. Disk II users can automatically have graphs made from existing data already stored.

Copies: **Just releases, 42 copies already sold.**
Price: **\$19.95 + \$1.25 for postage.**
Includes: Cassette containing program, instructions on unique uses. Please specify when your order, if you have ROM card or not.

Author: **Les Stubbs**
Available: Les Stubbs
23725 Oakheath Pl.
Harbor City, Ca.
90710

Name: **General Ledger Version 2.0**
System: **Apple II**
Memory: **48K**
Language: **Applesoft**
Hardware: **Dual Drives, Any Printer**

Description: General Ledger Version 2.0 — This program is a complete double-entry accounting system. User defined flexibility allowing up to 9 individualized departments in all Financial Reports. 10 levels of subtotals throughout each report gives more detailed Financial Statements. Using 5" drives, storing the entire Chart of Accounts and/or all posting approaches minicomputer times when verifying account numbers or sor-

ting records. High-speed printer routines will process 1,000 postings into 70 accounts in less than 30 minutes. Using 8" drives, high-speed sorting routines requiring no additional disk work space and fast binary searching techniques allow data files to be limited only by your available disk space. Compatible with any printer and printer interface.

Copies: **Version 1.0, 200; Version 2.0, Just released.**
Price: **\$180.00**
Author: **David A. McFarling**
Available: **Small Business Computer Systems
4140 Greenwood
Lincoln, NE 68504**

Name: **VOCAB 1.1**
System: **APPLE II or APPLE II PLUS**
Language: **Applesoft**
Memory: **32K**
Hardware: **APPLE II and DISK II**

Description: A vocabulary builder with over 1200 multiple choice questions allows the user to select either synonyms or antonyms. Intended as study aid for college board type exams (e.g., SAT, ACT, GRE, LSAT, etc.). Editor is included for expanding or modifying data lists. Several test formats with grading are options. Ideal for students with little computer experience.

Price: **\$15.00**
Includes: **User documentation and diskette**
Author: **Steven M. Sliwa**
Available: **Sliwa Enterprises
257 C Clemwood
Parkway
Hampton, VA 23669**

Name: **SORT**
System: **PET, APPLE**
Memory: **32K/16K PET; any Apple**
Language: **6502 Machine Language**
Hardware: **16K/32K PET, any APPLE**

Description: SORT is a 6502 machine language intelligent sort for commercial applications. Requires almost no user set-up when default values are used. Sorts integer, string and floating point arrays of more than one dimension with up to 20 sub-sorts-on-match (if needed).

Copies: **Just released**
Price: **depends on end use**
Author: **David B. Black**
Available: **MATRIX SOFTWARE INC.
1041 N. Main St.
Ann Arbor, MI 48104**

Name: **Investment Comparison**
System: **Apple II or Apple II Plus**
Memory: **32K with ROM Applesoft, 48K with RAM Applesoft**
Language: **ROM Applesoft. Can be used with RAM Applesoft by relocating above HGR2 display area or not using graphics display feature. 1024 bytes of Machine Code is loaded before Main program.**
Hardware: **Cassette tape. Program supports Printer but driver subroutine not included. Apple II.**

Description: We are often faced with decisions such as 'which of two investments is best?' This program provides a means of comparing them by the use of "Cash Discounting." Cash Discounting is a technique that is used to take into consideration the effects of inflation. Often we are faced with a decision of 'buying now' vs waiting a few years or paying cash vs time payments. The effects of inflation are not easy to quantify without some form of computer analysis. For each of two alternatives, entry include:
1. Inflation Rate for both
2. Initial Investment \$
3. Number of years to salvage point and value at that time.
4. Monthly expenses (or income)
5. Adjustments on an annual basis for the monthly expenses. This provides a means whereby you can make expenses track at a different rate than inflation. Display is in a form of a 'cash Flow' by year, and a graphical presentation is also provided. The graphics have labels.

Copies: **Just released**
Price: **\$16.95**
Includes: **Cassette, loading instructions, description, and example.**
Author: **Neil A. Robin**
Available: **TECH-DIGIT
21 Canter Lane
Sherwood, OR 97140**

Name: **The Life Dynamic Transformation Experience**
System: **Apple II**
Memory: **48K**
Language: **Applesoft and Machine Language**
Hardware: **Apple II Plus, Disk II**

Description: Unique! This program is designed for all those people who desire to experience self-transformation, life-awareness, making relationships work,

and "getting your act together," but do NOT desire to pay est or Lifespring or any of the other "trips" of the Human Potential Movement, \$300 or so. Includes game playing as a means to a fun way of increasing awareness.

Copies: **Many**
Price: **\$15.95**
Includes: **(disk) w/instructions**
Author: **Avant-Garde Creations**
Available: **Avant-Garde Creations

Name: **I CHING**
System: **Apple II or Apple II Plus**
Memory: **16K**
Language: **Integer Basic or Applesoft (please specify)**
Hardware: **Cassette or disk**

Description: Have your own oracle in your home. Consult the I Ching as others have through the ages. Includes a tutorial and a bibliography, as well as an interpretation of the results.

Copies: **Just released**
Price: **\$9.95 on cassette; \$14.95 on disk**
Author: **C. Brandon Gresham, Jr.**
Available: **Ad Hoc Enterprises
23 Van Buren Street
Dayton, OH 45402**

Name: **MUSIC**
System: **Any 6502 based system**
Memory: **1.5K**
Language: **Assembly**
Hardware: **Terminal or TVT and a speaker connected to one output port**

Description: Music is an interactive programming language for the creation of patterns of sound; "music". It is a compositional tool, not merely a music table compiler or piano roll type of program. Music's language structure is similar to "ROBOT" (see MICRO no. 10, page 15). Complex hierarchies of user defined functions - strings of musical events - which can be called like subroutines, allow the user to program highly intricate and surprising compositions.

Copies: **Just released**

PET UTILITY I You're working under a serious handicap if you can't write programs in machine language. The PET Utility I package gives you the tools you need:

•**Monitr**—The Monitr program lets you write, edit, save, and verify any machine language and/or BASIC program. Just load and run the Monitr program and then load the program you want to edit.

•**Programmer's Calculator**—This program will convert numbers into the binary, octal, decimal, and hexadecimal systems and function as a floating point calculator. It will also display all four numbering systems simultaneously and allow you to handle large numbers limited only by the size of your screen. For the 8K PET. **Order No. 0105P. \$7.95.**

SPACE WARS You must protect your planet against a wide variety of alien attacks. Included are:

•**Space War**—One or two players can pilot their saucers and duel with laser beams or shoot stars.

•**Star Ship Attack**—Your mission is to protect the food station satellites from destruction by the enemy star ship. You must capture, destroy, or drive off the attacking ship.

•**Battlefield**—Guess the location of the four enemy divisions and destroy them before your forces are wiped out.

Engaging in battle requires the Apple 8K and Integer BASIC. **Order No. 0096A \$7.95.**

SAHARA WARRIORS Enjoy all the gritty realism of desert warfare:

•**Commando**—You must send your commandoes to trap a German general and cut him off from his troops.

•**French Foreign Legion**—The battalions of the French Foreign Legion are in a race with the Arabs. Which side will get its battalions into the oasis in the shortest time? You and a friend can find out.

Both programs in this package require an Apple 8K and Integer BASIC. **Order No. 0080A \$7.95.**

ACCOUNTING ASSISTANT This package will help any businessman solve many of those day-to-day financial problems. Included are:

•**Loan Amortization Schedule**—This program will give you a complete breakdown of any loan or investment.

•**Depreciation Schedule**—You can get a depreciation schedule using any one of the following methods: straight line, sum of years-digits, declining balance, units of production, or machine hours.

This package is available for both the PET and Apple. It requires the Apple 16K and Apple-soft II BASIC. **Order No. 0088A \$7.95** or the PET 8K. **Order no. 0048P \$7.95.**

MIMIC Test your memory and reflexes with the five different versions of this game. You must match the sequence and location of signals displayed by your Apple. You'll need an Apple with 24K and Integer BASIC. **Order No. 0025A \$7.95.**

HAM PACKAGE I This versatile package lets you solve many of the problems commonly encountered in electronics design. With your 8K PET, you have a choice of:

•**Basic Electronics with Voltage Divider**—Solve problems involving Ohm's Law, voltage dividers, and RC time constants.

•**Dipole and Yagi Antennas**—Design antennas easily, without tedious calculations.

This is the perfect package for any ham or technician. **Order No. 0054P \$7.95.**

MORTGAGE WITH PREPAYMENT OPTION/ FINANCIER These two programs will more than pay for themselves if you mortgage a home or make investments:

•**Mortgage with Prepayment Option**—Calculate mortgage payment schedules and save money with prepayments.

•**Financier**—Calculate which investment will pay you the most, figure annual depreciation, and compute the cost of borrowing, *easily and quickly.*

All you need to become a financial wizard with a 16K Apple and Integer BASIC. **Order No. 0094A \$7.95.**

CHIMERA If you think the legendary Chimera was hard to handle, wait until you try this package. Included are:

•**Dropoffs**—You must make your opponent's men "dropoff" the board by moving and firing your own men. For one or two players.

•**Dots**—Place your lines carefully as you try to build and capture the squares. For one player.

•**Batter-up**—You and another player take turns at bat as your PET becomes both the pitcher and the umpire. For two players.

•**Reflex**—Round and round the little white ball rolls. Only fast reflexes can guide it into the center of the maze.

You'll almost be able to feel the Chimera's fiery breath as you play the games on your 8K PET. **Order No. 0110P. \$7.95.**

CODE NAME: CIPHER Enjoy that same feeling of intrigue and discovery with the Code Name: Cipher package. Included are:

•**Memory Game**—Would you like to match your memory against the computer's? You can with the Memory Game.

•**Codemaster**—One player types in a word, phrase, or sentence, and the PET translates that message into a cryptogram. The other player must break the code and solve the cryptogram in the shortest time possible.

•**Deceitful Mindmaster**—This isn't your ordinary Mastermind-type game. You must guess the five letters in the hidden code word.

•**Code Breaker**—Cracking this code won't be as easy as cracking walnuts. You'll need to flex your mental muscles to win this game.

If you want a mental challenge, then Code Name: Cipher is for you. For the 8K PET. **Order No. 0112P. \$7.95.**

ANNOUNCING THE HDE OMNIDISK 65/8

Now, you can "plug in" the latest in a successful series of flexible disk systems developed by HDE for the KIM, SYM and AIM microcomputers. The OMNIDISK 65/8 is a complete system, using 8 inch soft sectored diskettes with a formatted (IBM Standard) capacity of 256K. Of course, a disk formatting function is included as are system supporting utilities for file renaming, disk packing, copy (dual systems) and others.

TED, a full featured, line oriented editor is standard in KIM and SYM based versions to get you up and running on your project in a hurry. The AIM version uses the on-board editor. With the OMNIDISK 65/8 you can con-

centrate on your problem, the disk supports you all the way.

OMNIDISK 65/8 is available in an attractive walnut wood cabinet, or unpackaged for OEM applications in dual and single drive configurations. The HDE disk controller is a state-of-the-art 4½" by 6½" card electronically compatible with the 44-pin KIM-4 bus structure. The controller and disk-driver are designed to operate with the popular Shugart 801-R and compatible devices.

The OEM single drive is \$1195, the dual, \$1895 and the dual in the walnut cabinet, \$2200. Price is another reason to step up to the proven quality of an HDE system.

6502 Bibliography: Part XIX

Dr. William R. Dial
438 Roslyn Avenue
Akron, OH 4432C

581. Compute, Iss. 1 (Fall 1979)

- Moser, Carl W, "Universal 6502 Memory Test," pgs. 32-33.
A memory test program with ways to adapt it to PET, APPLE II, SYM, KIM, TIM, OSI 65D, Western Data Systems, ATARI, AIM, Super Kim, etc...
- Thornburg, Katie A. and David D., "Flying with PET PILOT," pgs.40-45.
Kids and microcomputers at Peninsula School.
- Tulloch, Michael, "CORVUS 11A Disc Drive," pg. 61.
How about a 9.6 megabyte memory on line? Compatible with the Apple DOS. Plugs into one slot of the Apple II.
- Victor, John, "Atari Computers: The Ultimate Teaching Machines?," pgs. 62-64.
Discussion of the advantages of the Atari in educational use.
- Lindsay, Len, "The Evolution of a Magazine," pgs. 65-66.
Discusses the history of the PET Gazette and its successor.
- Butterfield, Jim, "PET in Transition," pgs. 68-70.
Discusses new modifications of the PET and how programs must be modified to accommodate the new systems.
- Isaacs, Larry, "Retrofitting ROMS," pgs. 76-77.
How to replace the old PET Roms with the new units.
- Malmberg, David, "Screen Print Routine," pgs. 78-79.
General utility to print the screen using the new PET printers.
- Anon., "Cassette Format Revisited," pgs. 80-81.
Discussion of the PET Cassette format.
- Butler, Brett, "Trace for the PET," pgs. 84-85.
TRACE allows you to see Basic executing, displaying each actual line as it is executed.
- Hunkins, Arthur, "8-Bit Digital to Analog Converter," pgs. 90-91.
A review of the MicroTechnology Unlimited DAC board for Hal Chamberlin's 4-part music program.
- Stuart, Chuck, "Using Direct Access Files with the Dual Drive Disk," pgs. 93-96.
A tutorial on the Commodore 0240 Dual Drive Disk.

582. Creative Computing 5, No 10 (October 1979)

- North, Steve, "Mountain Hardware SUPERTALKER," pgs. 42-44.
A review of this new accessory for the Apple II.

- Yob, Gregory, "Personal Electronic Transactions," pgs 180-183.
Changes in the New PET; more on the structure of Basic variables; Simple variables, PET Basic Pointers, Discussion of cryptograms.

583. The Target (Sept/Oct 1979)

- Roland, Don, "AIM 65 MOVIT," pgs. 2-3.
A move program for the AIM 65.
- Butterfield, Jim. "Mortgage," pg. 4.
Mortgage program for AIM Basic.
- Clem, Don, "Memory Display," pg. 5.
A program to show what the 6502 is seeing at the output port of the AIM micro.
- Riley, Ron, "AIM BASIC," pgs. 6-8.
All about AIM Basic.
- Anon., "Statistical Analysis," pg. 10.
Regression programs for the AIM.

584. The Paper 2, Iss. 7 (September 1979)

- Busdiecker, Roy, "Think Negative!," pgs. 3-7.
Negative numbers and subtraction are covered in this continuing tutorial on binary numbers, with examples for the PET and 6502.
- Busdiecker, Roy, "Decimal to Binary," pg. 12.
PET Basic program for converting Decimal to Binary.
- Busdiecker, Roy, "Warning: Prevent Tape Decay," pgs. 21-22.
Use your PET tapes or at least rewind them occasionally to avoid print through on long undisturbed storage.
- Oakes, Peter L. A., "PLOT 2-MP," pgs. 23-25.
A plotting program for the PET.

585. Call Apple 2, No. 7 (September 1979)

- Wagner, Roger, "Speeding in Applesoft," pg.2.
How to speed up Applesoft Subroutines.
- Winston, Alan B., "The Multi-Lingual Apple," pgs. 4-5.
All about Pascal for the Apple.
- Hertzfeld, Andy, "Assembler Mini Reviews," pgs. 7-10.
A Consumer's guide to Apple II Assemblers: Apple Mini-Assembler, TED/ASM, Micro Products (Moser/Bishop) Assembler, Randy's Weekend Assembler, Aresco

Assembler, LISA, Microproducts 6-Character Label Assembler, E.A.T. (Apple II Text Processing System), 6502 Macro Assembler (Moser), UCSD Pascal Assembler, S-C Assembler, etc. etc....

Golding, Val J., "Peeking at Numbers," pg. 10.
Demonstration of a couple of ways to print numbers in Integer Basic larger than 32767 on the Apple.

Verlaque, Richard, "Decimal Division/Integer Basic," pg. 16.
Arithmetic program for Integer Basic on the Apple.

Thing, Mike, "Applemash," pgs. 18-19.
All about Modern Operation and the newly established "Apple-Crate," the Call-Apple message system ABBS.

Hoyte, Jim, "Subroutine to Allow Prohibited Character in String Inputs," pg. 24.
Routine lets you use commas, etc. in string inputs on the Apple.

Williams, Rick, "Flash Cards," pg. 28.
A Tutorial program for the Apple.

Capella, Mark, "Hide," pg. 29.
A program to hide program names from appearing in the catalog, but still permitting them to be recovered.

Golding, Val J., "Poke Chr\$ to screen," pg. 29.
Routine to put characters on screen at specified locations.

Dunmire, Darrell and Golding, Val J., "So Who Needs Applesoft?" pg. 31.
How to use string functions such as VAL, STR\$, and CHR\$ in Integer Basic on the Apple.

Neulen, Bob and Golding, Val J., "Change Catalog to CC," pg. 33.
A routine to change catalog to CC for the 3.2 DOS.

Corsetti, Vincent S., "File Restore," pg. 35.
How to restore a program on a disk after you realize you just wiped out something you didn't mean to, on the Apple.

586. Personal Computing 3, No. 11 (November, 1979)

Anon., "Jim and Kay Weir Re-invent the Wheel," pg. 14.
Discusses an application of an Apple II in the tire retreading business.

587. Computer Cassettes Review, No 7 (Fall 1979)

Purser, Robert Elliott, "Software for Apple, PET and TRS-80." Software Directory, cassette reviews, game reviews, and a list of "The Classics—the best of the past."

588. Rainbow 1, No. 8 (September 1979)

Ladbroke, Brian D., "Running PIMS on the APPLE II," pg. 1.
How to adapt this TRS-80 or PET program on Personal Information Management System to the Apple II.

Rost, Randi J., "HiRes Color," pgs. 4-7.
A tutorial.

Heller, H. Lewis and Gothrie, Nelson, "Dollar Conversion," pgs. 7-11.
Three programs for the Apple to convert Applesoft outputs to rounded off dollar and cents values.

Buchen, Steven E., "Slow Down," pgs. 16-21.
Two programs to slow down the list function of the Apple
MacDougal, John, "Parallel Interface for the Apple," pgs. 22-24.
Hardware article on a parallel interface providing 2 output ports and 2 input ports.

589. Interface Age 4, No. 12 (December 1979)

Gilbert, Betsy, "The Computerized Artist," pgs 72-73.
A description and evaluation of the Apple Graphics Tablet.

590. Kilobaud Microcomputing No. 35 (November 1979)

Lancaster, Don, "Lower case for your Apple II, Part 1," pgs. 30-36.

Expand the usefulness of your Apple with this inexpensive addition.

Schmeltz, Leslie R., "The Apple Goes to Market," pgs. 70-76.
Gather and analyze data from the stock market.

Derfler, Frank J., "Boy, Did I Make a Killing!" pgs. 112-114.
Real Estate profit guide program for the PET.

Bajcz, Bill, "A 'Pentronics' System," pgs. 158-160.
How to interface a PET to a Centronics 101 Printer.

591. Southeastern Software Newsletter No. 13 (Oct. 1979)

McClelland, George, "Pascal," pgs. 1-3.
Discussion of Pascal for the Apple.

Carpenter, Chuck, "Indexing Fundamentals, Part II," pgs. 4-6.
A tutorial on indirect addressing including a routine to read and print a memory range.

Anon., "Four HI-RES Programs," pgs 7-8.
Several hires routines to frame pages of a program.

592. Ohio Scientific's Small Systems Journal (1979)

Anon., "OSI Programs."
A collection of about 60 programs for OSI computers.

593. The Cider Press 2, No. 5 (September 1979)

Anon., "Disk of the Month," pg. 3.
Seventeen more programs.

Anon., "Serial Handshake Modification," pg. 7.
The high speed serial interface card of Apple Computer Company can be made to run faster than 300 baud by simple modification.

Hockenhull, James L., "Better Sounding Apples," pg. 8.
How to improve the sound of the apple by toggling the cassette output jack.

Nareff, Max J., "Crossfooting," pg. 8.
How to use crossfooting in tabulation of numbers.

594. MICRO 17 (October 1979)

Connolly, Rick, "Nicer Writer," pgs. 5-6.
Eliminate wraparound in your Apple.

Reynolds, William, "Disassembling the DOS 3.2," pgs. 7-10.
Use the Apple DOS 3.2 more effectively with this information on its organization.

Scanlon, C. H., "Hooking PET to Ma Bell," pgs. 11-13.
Use your system as a terminal with an inexpensive modem.

Mimlitch, Thomas R., "Spelunker," pgs. 15-24.
An adventure type game for the Apple.

DeJong, Marvin L., "6522 Timing and Counting Techniques," pgs. 27-39.
Application of the 6522 versatile interface adapter.

Chan Hark, "Card Shuffling Program for KIM-1," pgs. 41-42.
Teach the Kim to shuffle the cards.

Hoyt, Bruce, "How Do You Connect Peripherals to Your Superboard II?" pgs. 43-46.
Some concise information on the configuration and use of the I/O Ports of the OSI Superboard II.

Rowe, Mike (staff), "The MICRO Software Catalog: XIII," pgs. 49-51.

Nine programs are reviewed, mostly for Apples.

Morris, E. D., "Hypocycloids," pgs. 52-53.
A fast graphics program for the OSI.

MUSICAL COMPUTER I AND II

Learn How to Read Music!

Music lessons taught you in your home or at a studio cost from \$7 each half-hour and up! Now, available to you Apple II owners, is an opportunity for you to have your private music teacher in the comfort of your own home.

Written by a M.A. educator with over 20 years of music experience, this two-program cassette provides an *alternative* to music education!

These programs, utilizing high resolution graphics and a 32K Apple II, will make music learning fun and enjoyable for the entire family!

Apple II is a TM of Apple Computers, Inc.

OSI SOFTWARE FOR OHIO SCIENTIFIC

Over 50 programs for C1, C2, C4 & Superboard, on tape and disk. All come with listings and complete documentation.

GAMES - 4K - Tape		UTILITIES	
CHES FOR OSI - specify system	\$19.95	C1P CURSOR CONTROL	\$9.95
STARFIGHTER	5.95	gives real backspace, one key screen clear, and midline editing	
Real time space war.		RENUMBERER	5.95
SEAWOLFE	5.95	SUPERUTILITY	12.95
Floating mines, three target ships, etc.		Has Renumberer, Variable table maker and Search	
LUNAR LANDER	5.95	BUSINESS	
With full graphics		SMALL BUSINESS ANALYSIS	15.95
TEN TANK BLITZ	9.95	Does profit and loss, quick ratio, breakeven analysis and more. 13 pages of documentation.	
A sophisticated real time tank game.		STOCK PORTFOLIO	6.95
8K GAMES		Keeps track of your investments	
BACKGAMMON	9.95		
BLACKJACK	6.95		
Plays all Vegas rules			
Add \$1.00 each for Color/Sound			

Our \$1.00 catalog has free game and utility listings, programming hints and a lot of PEEKs and POKEs and other stuff that OSI forgot to mention - and a lot more programs for sale.

DISKS 5" COLOR/SOUND \$29.95
DISK 1. STARFIGHTER, ROBO-TANK, SEA WOLFE, BOMBER, TEN TANK BLITZ
DISK 2 BREAK THROUGH, LUNAR LANDER, ALIEN INVADER, KILL-ERROBOTS, SLASHBALL

PET TWO-WAY RS-232 and PARALLEL OUTPUT INTERFACE

SADI - The microprocessor based serial and parallel interface for the Commodore PET. SADI allows you to connect your PET to parallel and serial printers, CRT's, modems, acoustic couplers, hard copy terminals and other computers. The serial and parallel ports are independent allowing the PET to communicate with both peripheral devices simultaneously or one at a time. In addition, the RS-232 device can communicate with the parallel device.

Special Features for the PET interface include:

- Conversion to true ASCII both in and out
- Cursor controls and function characters specially printed
- Selectable reversal of upper and lower case
- PET IEEE connector for daisy chaining
- Addressable - works with other devices

Special Features for the serial interface include:

- Baud rate selectable from 75 to 9600
- Half or full duplex
- 32 character buffer
- X-ON, X-OFF automatically sent
- Selectable carriage return delay

Special Features for the parallel interface include:

- Data strobe - either polarity
- Device ready - either polarity
- Centronics compatible

Complete with power supply, PET IEEE cable, RS-232 connector, parallel port connector and case. Assembled and tested.

SAD1a (110VAC) \$295
SAD1e (230VAC) \$325

STOCK MARKET ANALYSIS PROGRAM DJI WEEKLY AVERAGE 1897-DATE

ANA1* (ANALYSIS 1) is a set of BASIC Programs which enables the user to perform analyses on the Dow Jones Industrial weekly average data. From 6 months to 5 years of user selected DJI data can be plotted on the entire screen in one of 5 colors using Apples' High Resolution capabilities. The DJI data can be transformed into different colored graphic representations called transforms. They are: user specified moving averages; a least squares linear fit (best straight line); filters for time, magnitude, or percentage changes; and user created relationships between the DJI data, a transform, or a constant using +, -, x, / operators. Colored lines can be drawn between graphic points. Graphic data values or their dates of occurrence can be displayed in text on the screen. Any graph or text can be outputted to a users printer. The Grid Scale is automatically set to the range of the graphs or can be user changed. As many colored graphs as wanted can be plotted on the screen and cleared at any time. The user can code routines to operate on the DJI/transform data or create his own disk file data base. ANA1 commands can be used with his routines or data base. An Update program allows the user to easily update the DJI file with current DJI weekly data.

The ANA1 two letter user commands are: CA = Calculate, no graph. CG = Clear Graphs, leave Grids. CK = Checking out program, known data. CO = Color of next graph (red, green, violet, white, blue). CS = Clear Screen. DL = Draw Line between points. FI = Filter data for time, magnitude, or percent change. FU = Data, transform, or constant Function with +, -, x, / operator. GD = Graphic mode, display all Graph Data on screen. GR = Graph data to screen. GS = Set Grid Scale. HE = Help, summary of any commands usage. LD = Load Data from disk file from inputted date to memory. LG = Leave Graphs, automatic Grid rescaling. LO = Look, select a range of the LD data and GR; All commands can now be used on this range. LS = Least squares linear fit of the data. MA = Moving Average of the data. NS = No Scale, next graph on screen does not use Grid Scale. NT = No Trace. PR = User implemented Printer routine. TD = Text mode, display Text Data on screen. TI = Time number to date or vice versa. TR = Trace. TS = Text Stop for number of lines outputted to screen when in TD. U1/U2 = User 1/2 implemented routines. VD = Values of Data outputted in text. VG = Values of Grid; low/high/delta. VT = Values of Transform outputted in text.

KIMEX-1 HERE'S A NEAT COMBINATION

IDEAL FOR DEDICATED INDUSTRIAL OR PERSONAL APPLICATION

FEATURES

- PLUGS DIRECTLY INTO AND COVERS UPPER HALF OF KIM-1. EXPANSION FINGERS CARRIED THROUGH FOR FURTHER EXPANSION.
- I/O-POWERFUL 6522 VIA PROVIDED. (VERSATILE INTERFACE ADAPTER)
- 16 BI-DIRECTIONAL I/O LINES
4 INTERRUPT/HANDSHAKE LINES
2 INTERVAL TIMERS
SHIFT REGISTER FOR SERIAL-PARALLEL/PARALLEL-SERIAL OPERATIONS.
- RAM-SOCKETS PROVIDED FOR 4K RAM CONTIGUOUS WITH KIM RAM. (LOW POWER MOSTEK 4118 1KX8's)
- COMPLETE DOCUMENTATION
- EPROM-SOCKETS PROVIDED FOR 8K EPROM. (INTEL 2716 2KX8's)
- BLOCK SELECT SWITCHES FOR EPROM. EPROM USABLE IN ANY ONE OF FOUR 8K BLOCKS FROM 8000H.
- AUTOMATIC RESET ON POWER-UP AND SWITCH SELECTABLE INTERRUPT VECTORS.
- PERMITS UNATTENDED OPERATION.
- LOW POWER CONSUMPTION- 5V AT 300 Ma. FULLY LOADED
- BUFFERED ADDRESS LINES
- HIGH QUALITY PC BOARD, SOLDER MASK
- ASSEMBLED AND TESTED

APPLICATIONS

PROM, RAM AND I/O EXPANSION ON ONE BOARD HAVING MANY INDUSTRIAL/HOME APPLICATIONS FOR DATA ACQUISITION, PROCESS CONTROL, AUTOMATIC CONTROL OF FURNACE, SOLAR HEAT, LIGHTING, APPLIANCES, ETC.

NOW PRESENTING...

Software for Apple II[®]

for your Entertainment · Business · Education

Star Attractions:

+WRITE-ON! Professional Word Processing lets you edit, move, delete, find, change and repeat any body of text, merge and save on disk. Does right-justified margins, centering, page numbering. You can enter name & address onto form letters when printing. Edit and merge any text disk file—even files not created by WRITE-ON—and spool text to disk for letter printing or editing. Chain up to 100 files in a single printer run. Needs Applesoft and 32K.

On Disk with operating manual \$99.50

FILEMASTER I Here's a powerful data file manager giving you two programs—FORMAT & RETRIEVAL. It handles everything from phone lists to legal abstracts. You can design your own data structure with up to 500 characters per record and up to 15 searchable fields in any combination. Needs 32K. **On Disk** \$49.95

FILEMASTER II Has all the same features of FILEMASTER I plus allows for totaling, advanced math routines, more powerful print formatting, larger data fields, and disk-to-disk transfers \$99.50

+Space (Edu-Ware) Six programs form a unique epic game series. Multi-faceted simulation of life in interstellar society. You and opponents must make life & death decisions. Keeps track of your progress from one game to next. Needs 48K and Applesoft ROM. **Disk** \$29.95

Pot O'Gold I or our All New Pot O' Gold II. A collection of 49 programs for 16K Apple. Everything from Logic to action games. Only a buck a game. Specify I or II.
Price each: **Tape** \$49 **Disk** \$54

+Adventure This original, full-function game is the same as the one developed for large mainframes. Fight off pirates and vicious dwarfs. 700 travel options, 140 locations, 64 objects. Needs Applesoft ROM & 48K. **Disk** \$29.95

32K Disk Inventory: Use stock numbers, description, vendor, record of purchase and sales date, amount on hand, cost & sell price, total value. Holds up to 300 items.
Disk \$40
+With Bill of Materials: Disk \$50

32K Data Base Cross file for phone lists, bibliographies, recipes. Run up to 9 lines of 40 columns each. Search by item anywhere.
Disk \$20

24K Hi-Res Life Simulation Conway's equations on 296x180 screen. A mathematical simulation to demo population growth with birth, death and survival as factors. **Tape** \$10

16K Rainbow's Casino 9 gambling games: Roulette, Blackjack, Craps, Horseshoe, Yahtzee, Keno, Slot Machine, Poker, and Acey-Ducey. Needs 16K. **Tape** \$29.95 **Disk** \$34.95

16K Space War: You in your space capsule battle against the computer's saucer . . . in hi-res graphics. **Tape** \$12

16K Memory Verity Diagnostic routine to check range of memory. Indicates faulty addresses, data in memory cell, and faulty data. **Tape** . . . \$5

16K Applaudion Music synthesis composes original Irish jigs. Enter your own music and save on tape or disk. Includes 3 Bach fugues.

Tape \$10

+48K Edu-Pack (Edu-Ware) This package combines COMPU-READ—five speed reading programs; three PERCEPTION games where random shapes and sizes must be matched; and STATISTICS for computing Mean, Variance, Standard Deviation, and much more! Needs Applesoft ROM. **Disk** \$39.95

+32K Sargon II (Hayden) Here's the program that came in third against the big machines (mainframes and maxis) at the 9th North American Computer Chess Championship and placed first in the European Microcomputer Chess Championships! Has seven levels of play with Levels 0 - 3 playing in tournament time. Need a challenge? This is it!!

Tape \$29.95 **Disk** \$34.95

16K Hi-Res Baseball (Programma International) This animated simulation of a major league baseball game is for two players. The scoreboard is in the lower left of screen with the "throw pointer" for directing a throw in the lower right corner. Written entirely in machine language, the action is quick and smooth, making it the finest simulation of its kind.

Tape \$15.95

OTHER SPECIAL ITEMS FOR YOUR APPLE II

VERSAWRITER This digitizer drawing board, complete with a powerful software package on disk, lets you create any picture in color with high-resolution graphics. It's ideal for mass graphics. You can trace, edit, save and recall what you draw. It's a simple-to-use system for students, artists, engineers and graphic programmers. Has an 8½"x11" working area. New applications added include: •Text Writer adds text to your pictures. You control size, color and direction of text; •Electronic Drawing lets you create schematics and includes commonly used symbols for transistors, OPAMPS, and FETS; •Distance/Area lets you compute distances on maps or area of any frame. Applesoft ROM and 32K required. **\$249.95**
Add \$5 (U.S.) or \$10 (Foreign) for shipping.

Apple Monitor Peeled Everything you wanted to know about the Apple Monitor but couldn't figure out. All the PEEKS, POKES, and CALLS explained in an easy-to-understand form, written in plain English.
Only \$9.95

What's NEW

from

SOFTAPE

JOURNEY

You are about to embark on a very hazardous but profitable JOURNEY. The Apple is your eyes, ears, arms and legs. You can "GET" an object that is laying on the ground and you can travel North, East, South, West, Up and Down. You need to acquire tools as you JOURNEY forth and score precious points to become a GRANDMASTER JOURNEYER. JOURNEY REQUIRES 48K and loads on any Apple.

JAB-879 \$19.95

BASEBALL FEVER

Catch the fever with this ball game that never gets rained out. You are the pitcher, batter and manager for your team. As manager you control line-ups, pitching staff and base stealers. The optional sound effects enhance the colorful animation. When the game is over you can save the game statistics to tape or disk and you are on your way to a winning season. Requires 32K or 48K with disk. INTEGER BASIC

BFM-879 \$12.95

OTHELLO

Play a true competitor of this ancient game of territorial strategy. By flanking a line of the opponents men you "flip" them over to your own color. Be cautious though, for OTHELLO will never say die until the last move. OTHELLO is available for both INTEGER BASIC and APPLESOFT, and loads in 16K.

OHS-279 \$14.95

FOG-279 \$49.95

PADDLE PLUS

If you have the same problem as Arnold Zieback with constantly changing paddles and PENS, then you too need PADDLE PLUS. This extender plugs into your game I/O port and is conveniently secured for easy access.

PPA-180 \$14.95

WHERE TO GET IT: Look for the SOFTAPE Software display in your local computer store. Apple dealers throughout the United States, Canada, South America, Europe and Australia carry the SOFTAPE Software line of quality products.

If your local dealer is sold out of SOFTAPE Software you can order it direct from us by check or Visa/Master Charge. If you have any questions please call us at:

Or mail your order to the address below. We'll add your name to our mailing list for free literature and announcements of new products.

SOFTAPE

10432 Burbank Blvd. • North Hollywood, CA 91601

BRIGHT PEN

What is the difference between a light pen and the BRIGHT PEN. Intelligent software and extensive documentation. The software will help you to calibrate your system for optimum operation. The documentation details the BRIGHT PEN DRIVERS and how they are appended to your INTEGER BASIC programs. BRIGHT PEN includes documentation booklet, two cassettes and, of course, the BRIGHT PEN.

BPE-279 \$34.95

DUMP-RESTORE

With DUMP-RESTORE you will be able to backup your disk files to cassette and restore the disk. This allows you to relocate disk space for maximum efficiency and speed. The programs are saved and restored individually or the entire disk can be saved and restored. DUMP-RESTORE loads with INTEGER BASIC and requires 32K.

DRG-879 \$14.95

RESET GUARD

Tired of hitting reset by mistake? If so RESET GUARD will solve the problem. RESET GUARD is a hardware package that plugs directly into your Apple. It protects your programs because it will only Reset if hit twice in one second. Guard your Apple and your sanity with RESET GUARD.
