Study on Medicinal Plants of Bogor Botanic Garden, Bali Botanic Garden and Cibodas Botanic Garden in Indonesia

Park, Jong Cheol

Department of Oriental Medicine Resources and Research Institute of Korean Oriental Medicine,
Sunchon National University

Abstract

From the Bogor Botanic Garden, Bali Botanic Garden and Cibodas Botanic Garden in Indonesia, 293 medicinal plants were examined by photographing. From the Bogor Botanic Garden, 96 species in 50 families of plants were investigated. Among the medicinal plant region of this botanic garden, the most dominant family was Zingiberaceae with 12 species, followed by Acanthaceae with 7 species, Apocynaceae 5 species, Euphorbiaceae 5 species and Piperaceae 5 species. From Bali Botanic Garden, 185 species in 72 families of plants were studied. The most dominant families in the medicinal plant region of this botanic garden were Euphorbiaceae with 9 species and Zingiberaceae with 9 species, followed by Myrtaceae with 7 species and Malvaceae 5 species. From the Cibodas Botanic Garden, 12 species of medicinal plants were classified.

서론

인도네시아의 정식명칭은 인도네시아공화국(Republic of Indonesia)이다. 자바, 수마트라, 보르네오, 셀레bes 등 크고 작은 섬들로 이루어진 세계 최대의 도서국가이며 수도는 자카르타(Jakarta)이다. 인도네시아 과학원(Indonesian Institute of Sciences, LIPI)은 4 개의 식물원을 보유하고 있다. 즉 보고르 식물원(Bogor Botanic Garden), 발리 식물원(Bali Botanic Garden), 치보다스 식물원(Cibodas Botanic Garden) 및 푸르오다디 식물원(Purwodadi Botanic Garden)이다.¹⁾ 이중 보고르 식물원, 발리 식물원과 치보다스 식물원을 방문하여 약용식물을 조사했다. 보고르 식물원은 자카르타에서 남쪽 방향으로 60 km 떨어진 곳에 있다. 1817년에 설립된 이 식물원은 87 헥타르 면적에 13,983 종의 식물이 자라고 있다.^{2,3)} 1959년에 설립된 발리 식물원은 발리 섬의 거의 중앙에 위치해 있으며 157.5 헥타르의 면적을 가지고 있다.⁴⁾ 치보다스 식물원은 자카르타에서 남동쪽 100 km에 위치해 있다. 1852년 설립되었으며 면적은 84.99 헥타르이다.^{5,6)} 3 곳 식물원에서 293 종의 약용식물을 촬영한 후 이를 학명을 알파벳순과 과명 순으로 정리하였다. 촬영한 식물 사진은 증거사진으로서 저자의 연구실에 보관 중이다.

본론

1) 조사방법

Table 1. Information on 3 botanical gardens in Indonesia

Botanical Garden Name	Bogor Botanic Garden
Location	Jl. Ir. H. Juanda 13, Bogor 16122, Indonesia

저자가 방문 조사한 인도네시아의 보고르 식물원, 발리 식물원 및 치보다스 식물원의 정보는 Table 1과 같다. 본 논문에 기재한 식물은 식물원의 팩말에 있는 학명을 기본으로 하여 the Plant List⁷⁾,

the International Plant Names Index⁸⁾, 국가생물종지식정보⁹⁾를 통해 이들 학명을 확인했다. 식물원 팻말에서 학명이 이명으로 표기된 것은 본문에 함께 제시하였다.

2) 결과 및 고찰

인도네시아의 3 개 국립식물원에서 293 종의 약용식물을 사진촬영하여 그 학명을 정리·분석했다. 즉 보고르 식물원, 발리 식물원 및 치보다스 식물원에서 각 96 종, 185 종, 12 종의 약용식물이 확인되었다.

보고르 식물원은 약용식물 구역과 일반식물 구역으로 나눠 촬영했다. 약용식물 구역에서는 31 과 68 종이 확인되었다(Fig. 1). 과(科)별로 분석하면 생강과(Zingiberaceae) 식물이 12 종으로 가장 많았으며, 쥐꼬리망초과(Acanthaceae) 7 종, 협죽도과(Apocynaceae), 대극과(Euphorbiaceae), 후추과(Piperaceae) 식물이 각 5 종 순으로 분포되어 있다. 이중 생강과(Zingiberaceae)의 12 종 식물은 *Alpinia galanga*, *Alpinia hainanensis*, *Amomum cerasinum*, *Amomum compactum*, *Boesenbergia rotunda*, *Curcuma aeruginosa*, *Curcuma zanthorrhiza*, *Curcuma zedoaria*, *Etlingera brevilabrum*, *Zingiber officinale*, *Zingiber ottensii*, *Zingiber zerumbet*이다. 약용식물 구역을 속(屬)별로 정리하면, 후추속(*Piper*) 식물 5 종, 강황속(*Curcuma*)과 생강속(*Zingiber*) 식물이 각 3 종이다(Table 2). 보고르 식물원의 일반식물 구역에서는 19 과 28 종의 식물이 확인되었다. 그중 녹나무속(*Cinnamomum*) 식물이 3 종 분포하고 있다(Table 3).

발리 식물원도 약용식물 구역과 일반식물 구역으로 구분하여 사진 촬영했다. 약용식물 구역에서 조사한 식물은 48 과 97 종이다(Fig. 2). 가장 많이 재배되어 있는 과(科)는 대극과(Euphorbiaceae)와 생강과(Zingiberaceae) 식물로서 9 종이다. 다음으로 도금양과(Myrtaceae) 7 종, 아욱과(Malvaceae) 식물이 5 종이다. 대극과(Euphorbiaceae)의 9 종 식물은 *Acalypha hispida*, *Acalypha wilkesiana*, *Aleurites triloba*, *Codiaeum variegatum*, *Euphorbia lactea*, *Euphorbia tirucalli*, *Jatropha curcas*, *Jatropha integerrima*, *Jatropha multifida*이다. 생강과(Zingiberaceae) 식물의 9 종은 *Alpinia galanga*, *Curcuma aeruginosa*, *Curcuma heyneana*, *Curcuma longa*, *Curcuma viridiflora*, *Curcuma zanthorrhiza*, *Kaempferia rotunda*, *Zingiber montanum*, *Zingiber officinale*이다. 이 식물원의 조사 식물을 속(屬)별로 분류하면 강황속(*Curcuma*)과 포도속(蒲桃屬, *Syzygium*) 식물이 각 5 종, 무궁화속

(*Hibiscus*)과 자트로파속(*Jatropha*) 식물이 각 3 종이 분포하고 있다(Table 4). 발리 식물원의 일반식물 구역에서 24 과 88 종 식물을 촬영했다. 이곳에는 베고니아속(*Begonia*) 식물 21 종, 전죽속(滇竹属, *Gigantochloa*)과 진달래속(*Rhododendron*) 식물 각 7 종, 포도속(蒲桃属, *Syzygium*) 식물은 5 종이자라고 있다(Table 5).

치보다스 식물원에서는 기린갈(*Daemonorops draco*), 산계초(*Litsea cubeba*), 인도자단(*Pterocarpus indicus*)을 포함한 12 종의 약용식물을 조사했다(Table 6). 이들 전체의 약용식물 사진은 저자의 연구실에 증거사진으로 보관 중이다.

	<i>Dimocarpus longan</i> Lour.	<i>Euphoria longan</i> (Lour.) Steud.
Sapindaceae	<i>Dodonaea viscosa</i> (L.) Jacq.	<i>Dodonaea angustifolia</i> L.f.
	<i>Guioa diplopeta</i> (Hassk.) Radlk.	
	<i>Guioa waigeoensis</i> Welzen	
	<i>Mischocarpus pentapetalus</i> (Roxb.) Radlk.	
Simaroubaceae	<i>Ailanthus integrifolia</i> Lam.	
Zingiberaceae	<i>Hedychium coronarium</i> J.Koenig	

Table 6. The plant list of Cibodas Botanic Garden in Indonesia

Family name	Scientific name
Altingiaceae	<i>Liquidambar formosana</i> Hance
Arecaceae	<i>Daemonorops draco</i> (Willd.) Blume
Combretaceae	<i>Terminalia australis</i> Cambess.
Lauraceae	<i>Litsea cubeba</i> (Lour.) Pers.
	<i>Litsea diversifolia</i> Blume
Leguminosae	<i>Caesalpinia spinosa</i> (Molina) Kuntze
	<i>Pterocarpus indicus</i> Willd.
Polypodiaceae	<i>Drynaria pleuridoides</i> Pr.
Rubiaceae	<i>Cinchona pubescens</i> Vahl
Schisandraceae	<i>Illicium anisatum</i> Gaertn
	<i>Illicium parviflorum</i> Michx. ex Vent.
Styracaceae	<i>Styrax formosanus</i> Matsum.

결론

보고르 식물원의 약용식물 구역에서 31 과 68 종의 식물을 조사했다. 이를 과(科)별로 정리하면 생강과 식물이 12 종으로 가장 많으며, 다음으로 쥐꼬리망초과 7 종, 협죽도과, 대극과, 후추과 식물이 각 5 종 순이었다. 이 식물원의 일반식물 구역에서 19 과 28 종의 식물을 조사했다. 발리 식물원의 약용식물 구역에서 48 과 97 종의 식물을 확인했다. 가장 많이 분포한 과(科)는 대극과와 생강과 식물로서 9 종이다. 다음으로 도금양과 7 종, 아욱과 식물이 5 종 자라고 있다. 발리 식물원의 일반식물 구역에서는 24 과 88 종의 식물이 확인되었다. 치보다스 식물원에서는 12 종의 약용식물을 조사했다.

감사의 글

자료 정리를 위해 수고해 준 박성민 前 연구보조원(순천대 한의약연구소)에게 감사드린다.
