

	FIRST AID
IF ON SKIN OR Clothing	 Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes Call a poison control center or doctor for treatment advice.
IF IN EYES	 Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, ther continue rinsing eye. Call a poison control center or doctor for treatment advice.
	HOTLINE NUMBER
doctor or going	t container or label with you when calling a poison control center o for treatment. For emergency information concerning this product control center at 1-800-222-1222.

Contains azoxystrobin, the active ingredient used in Heritage® Fungicide.

Azoxy 50WDG Select is not manufactured, or distributed by Syngenta Crop Protection, LLC, seller of Heritage® Fungicide.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

Harmful if absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- · Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material such as polyvinyl chloride (PVC) ≥14 mils, nitrile rubber ≥14 mils or butyl rubber ≥14 mils
- · Shoes plus socks

USER SAFETY REQUIREMENTS

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240 (d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for "applicators and other handlers" and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

USER SAFETY RECOMMENDATIONS

Users should:

Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

 Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Azoxystrobin can be persistent for several months or longer.

Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or insate.

GROUNDWATER ADVISORY

Azoxystrobin and a degradate of azoxystrobin are known to leach through soil to groundwater under certain conditions as a result of label use. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.

SURFACE WATER ADVISORY

This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow groundwater. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features, such as ponds, streams, and springs will reduce the potential loading of azoxystrobin and a degradate of azoxystrobin from runoff water and sediment. Runoff of this product also will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours.

Notify State and/or Federal authorities and Prime Source, LLC immediately if you observe any adverse environmental effects due to the use of this product.

PHYSICAL OR CHEMICAL HAZARDS

Do not use with or store near any oxidizing or reducing agents. Hazardous chemical reaction may occur.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Failure to follow the Directions For Use and Precautions on this label may result in plant injury or poor disease control.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

AGRICULTURAL USES

Use Azoxy 50WDG Select to prevent and control diseases of turf produced on sod farms; and ornamentals, fruit and nut trees, and vegetable and herb plants grown for transplanting.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restrictedentry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Chemical-resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Shoes plus socks

NON-AGRICULTURAL USE

Use to prevent and control diseases on turf and ornamentals on golf courses, lawns, and landscape areas around residential, institutional, public, commercial, and industrial buildings, parks, recreational areas, and athletic fields.

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. The area being treated must be vacated by unprotected persons.

Do not treat areas while unprotected humans or domestic animals are present in the treatment areas. Because certain states may require a more restrictive entry interval, consult your State Department of Agriculture for further information.

Do not allow entry into treatment area until area that was treated is dry.

PRODUCT INFORMATION

Azoxy 50WDG Select is a broad spectrum systemic fungicide that prevents or controls the listed pathogens that cause foliar, stem, and root diseases, including leaf and stem blights, leaf spots, patch diseases, mildiews, anthranconse, fairy rings, molds, and rusts of turfgrass, ornamentals, vegetables and herbs. Azoxy 50WDG Select may be applied in alternating application programs or in tank mixes with other registered plant protection products. All applications must be made according to the use directions that follow.

Use Restrictions:

- D0 NOT apply more than 10 lbs. Azoxy 50WDG Select (5 lb. a.i.) per acre per year to crops grown outdoors.
- DO NOT apply more than 1.1 lbs. of Azoxy 50WDG Select (0.55 lb. a.i.) per acre per application.
- DO NOT graze or feed clippings from treated turf areas to animals.
- DO NOT use spray equipment that has been used to apply Azoxy 50WDG Select to spray apple, crabapple and flowering cherry trees. Even trace amounts can cause unacceptable phytotoxicity.
- DO NOT apply Azoxy 50WDG Select when conditions favor drift beyond the area intended for application. Conditions that can contribute to drift include thermal inversion, wind speed and direction, sprayer nozzle and pressure combinations, and spray droplet size. Contact your State extension agent for spray drift prevention guidelines in your area.
- D0 NOT apply Azoxy 50WDG Select where spray drift may reach apple, crabapple or flowering cherry trees.
- DO NOT apply when weather conditions favor drift from treated areas to a non-target aquatic habitat.

Use Precautions:

- Azoxy 50WDG Select is highly phytotoxic to apple and certain crabapple and flowering cherry varieties. Use caution to prevent injury to these trees.
- Azoxy 50WDG Select has demonstrated some phytotoxic effects when mixed with products that are formulated as EC's. These effects are enhanced if applications are made under cool, cloudy conditions and these conditions remain for several days following application. In addition, silicone-containing adjuvants have also contributed to phytotoxicity.

Adjuvants: When an adjuvant is to be used with this product, use an adjuvant that meets the standards of the Chemical Producers and Distributors Association (CPDA) adjuvant certification program.

SPRAY DRIFT MANAGEMENT

Application equipment and weather are the key factors that contribute to spray drift. Applications must not be made when equipment or weather conditions may lead to spray drift outside of the intended application area. Avoiding spray drift is the responsibility of the applicator. See also specific information in **Use Restrictions** and **Use Precautions** sections of this label.

INTEGRATED PEST (DISEASE) MANAGEMENT (IPM)

Integrate Azoxy 50WDG Select into an overall disease and pest management strategy whenever the use of a fungicide is required. Cultural practices known to reduce disease development, such as planting of resistant cultivars, removal of plant debris to reduce inoculum and water management, must be followed. The following sections in this label identify specific IPM recommendations for each crop. Consult your local agricultural, turf and ornamental authorities for additional IPM strategies established for your area. Azoxy 50WDG Select may be used in State Agricultural Extension advisory (disease forecasting) programs that specify application timing based on environmental factors favorable for disease development.

RESISTANCE MANAGEMENT

Some plant pathogens have been shown to develop resistance to fungicide products used repeatedly for their control. Apply **Azoxy 50WDG Select** at full label-use rates and in a tank mix or a rotation with other registered fungicides that have a different mode of action. As **Azoxy 50WDG Select** is a strobilurin (Group 11) fungicide, DD NOT alternate with other strobilurins, such as pyraclostrobin and trifloxystrobin. DO NOT alternate or tank mix **Azoxy 50WDG Select** with fungicides to which resistance has already developed. Since pathogens differ in their potential to develop fungicide resistance, use the resistance management strategies for each disease given in the specific use directions section in this label. Prime Source, LLC encourages responsible resistance management to ensure effective long-term control of the fungal diseases on this label. Consult your local or State Extension Service for resistance management strategies that are complementary to those in this label.

MIXING INSTRUCTIONS

To prepare spray solution, partially fill the spray tank with clean water and begin agitation. Add the specified amount of **Azoxy 50WDG Select** to the tank, allowing adequate time for good mixing. Add an adjuvant if specified. Finish filling the tank to the desired volume to obtain the proper spray concentration. Maintain agitation throughout the spraying operation. **D0 N0T** allow spray mixture to stand overnight or for prolonged periods. Mix only the amount of spray required for your immediate use. Sprayers must be thoroughly cleaned immediately after application.

Azoxy 50WDG Select is compatible with commonly used fungicides, liquid fertilizers, herbicides, insecticides and biological control products. If tank mixes are desired, add products to the spray tank in the following order: Azoxy 50WDG Select, other WG or dry flowable formulations, wettable powders and flowable (aqueous suspensions) products. Observe all directions, precautions, and limitations on labeling of all products used. Consult compatibility charts or your local or State agricultural or turf authorities for compatibility information.

It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

D0 NOT mix Azoxy 50WDG Select in the spray tank with pesticides, surfactants or fertilizers unless compatibility charts or your own prior use has shown that the combination is physically compatible, effective and non-injurious under your conditions of use. If physical compatibility is unknown, the following procedure must be followed: Pour the specified proportions of the products into a suitable container of water, mix thoroughly and allow it to stand at least 20 minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible.

Azoxy 50WDG Select is incompatible with many fertilizers when low water volumes are used for in-furrow applications. Cold temperatures and water quality exacerbate these compatibility problems. Conduct a physical compatibility test as described in the paragraph as above before making a field application.

NOTE: Azoxy 50WDG Select has demonstrated some phytotoxic effects when mixed with products that are formulated as EC's. These effects are enhanced if applications are made under cool, cloudy conditions and these conditions remain for several days following application. In addition, silicone-containing adjuvants have also contributed to phytotoxicity.

APPLICATION INSTRUCTIONS

Apply Azoxy 50WDG Select prior to disease development at the rates and timings given in this label. Apply at the higher rates in the rate range and/or shorter spray intervals under conditions of heavy infection pressure, on highly susceptible varieties or when environmental conditions are conducive for disease development. Use of Azoxy 50WDG Select as a "rescue" (late curative or eradicant) treatment may not give satisfactory disease control.

Azoxy 50WDG Select may be applied with various types of spray equipment commonly used for making ground and aerial applications. For ground applications, apply Azoxy 50WDG Select in a volume of water sufficient to provide good plant canopy penetration. For aerial applications, apply Azoxy 50WDG Select in a minimum of two gallons of water per acre. Ground application is preferred as it typically provides better canopy penetration and coverage.

Proper adjustments and calibration of spraying equipment are essential for optimal disease control. If you have questions about calibration, contact a State Extension Service specialist, the equipment manufacturer or other experts.

Directions for Use Through Sprinkler and Drip Chemigation Systems

Spray Preparation: Chemical tank and injector system must be thoroughly cleaned. Flush system with clean water.

Use Precautions for Sprinkler and Drip Irrigation Applications

Drip and Micro Irrigation: Azoxy 50WDG Select may be applied through drip and micro irrigation systems to potted ornamentals or to bedded, field-grown ornamentals for soil-borne disease control. The soil or potting media must have adequate moisture capacity prior to drip application.

Terminate drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, delay subsequent irrigation (water only) for at least for 24 hours following a drip application. Sprinkler Irrigation: Apply this product through sprinkler irrigation systems including center pivot, motorized boom, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move irrigation systems. Do not apply this product through any other type of irrigation system except as specified on this label.

Apply with center pivot or continuous-move equipment distributing ½ acre-inch or less during treatment. In general, use the least amount of water required for proper distribution and coverage. If stationary systems (solid set, hand-lines or wheel-lines other than continuous move) are used, inject this product into no more than the last 20-30 minutes of the set. **D0 NOT** apply when winds are greater than 10-15 mph to avoid drift or wind skips. Plant injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform treated water. Thorough coverage of foliage is required for good control. Good agitation must be maintained during the entire application period.

If you have questions about calibration, contact the State Extension Service specialist, equipment manufacturers, or other experts.

- The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
- The pesticide injection pipeline must contain a functional, automatic, quickclosing check valve to prevent the flow of fluid back toward the injection pump.
- The pesticide injection pipeline must also contain a functional, normally closed, Solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

DO NOT connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

Specific Instructions for Public Water Systems

- Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- 2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, discharge the water from the public water system into a reservoir tank prior to pesticide introduction. There must be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.
- The pesticide injection pipeline must contain a functional, automatic, quickclosing check valve to prevent the flow of fluid back toward the injection pump.
- 4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

DIRECTIONS FOR TURF

Azoxy 50WDG Select controls the listed pathogens that cause foliar, stem, and root diseases, including leaf and stem blights, leaf spots, patch diseases, mildew, molds and rusts of turfgrass. Azoxy 50WDG Select may be used on golf courses, lawns and landscape areas around residential, institutional, public, commercial, and industrial buildings, parks, recreational areas, athletic fields and sod farms.

Integrated Pest (Disease) Management (IPM)

Sound turf management resulting in healthy, vigorous turf is the foundation of a good IPM program. Cultural practices, such as proper choice of turf variety, nutrient management, proper cutting height, thatch management, and proper watering, drainage, and moisture stress management must be integrated with the use of fungicides to increase turf vigor and reduce the susceptibility to disease. Immunoassay detection kits and extension service diagnostic services can assist in the early and accurate identification of causal organisms and corresponding selection of the proper fungicide when required.

Application Directions

Apply **Azoxy 50WDG Select** prior to disease development. Mix **Azoxy 50WDG Select** with the required amount of water and apply as a dilute spray in 2-4 gallons of water per 1,000 square feet (87-174 gallons per acre). Repeat applications at specified intervals. For spot treatments, use 0.2 oz. of **Azoxy 50WDG Select** per 1-2 gallons of water.

Soil Injection Applications

Azoxy 50WDG Select may be applied through a liquid fungicide injector for the control of ectotrophic root diseases such as summer patch and take-all patch. Use Azoxy 50WDG Select only in liquid injection equipment specifically designated for pesticide use.

Apply **Azoxy 50WDG Select** at 0.2 to 0.4 oz. per 1,000 sq. ft. Spray carrier volume must fall within 30-150 gallons of water per 1,000 sq. ft. Space injection hole 1 inch by 1 inch for optimum control. Do not exceed injection depth 2 inches.

One-inch depth is required for optimum results. Application timing must follow disease control strategies used for normal broadcast spray programs.

Application when Establishing Turfgrass from Seed or in Overseeding of Dormant Turfgrass

Azoxy 50WDG Select may be used for control of certain turfgrass diseases associated with turfgrass establishment from seed or during overseeding of dormant turfgrass. Azoxy 50WDG Select may be safely applied before or after seeding or at seedling germination and emergence to ryegrass, bentgrass, bluegrass (including *Poa triviais*), and fescue turfgrass types. Optimum application timing is during seeding. See Application Directions section.

Dollar Spot: Azoxy 50WDG Select does not control Dollar Spot. During periods of Dollar Spot pressure, always mix Azoxy 50WDG Select with chlorothalonil, propiconazole, fluazinam or other Dollar Spot control fungicides. Azoxy 50WDG Select is compatible in tank mixes with many other fungicides that control Dollar Spot. Follow directions under MIXING INSTRUCTIONS above.

TURF USE RESTRICTIONS:

- D0 NOT apply more than 10 lbs. Azoxy 50WDG Select (5 lbs. a.i.) per acre per year.
- DO NOT make more than 9 applications of Azoxy 50WDG Select per year.
- Resistance Management: D0 NOT spray more than two sequential Azoxy 50WDG Select applications for Gray Leaf Spot or *Pythium* spp. control. For all other diseases when Gray Leaf Spot and *Pythium* spp. are not present, D0 NOT spray more than three sequential applications of Azoxy 50WDG Select.
- **DO NOT** apply to golf course turf by air.

Target Diseases	Use Rate (Oz. Product per 1,000 Sq. Ft.)	Application Interval (Days)	Application Instructions
Anthracnose (Colletotrichum cereale)	0.2 - 0.4	14-28	Use preventatively. Begin applications when conditions are favorable for disease infection, prior to disease symptom development.

Table 1: Directions for Application for Turf Diseases

(continued)

Target Diseases	Use Rate (Oz. Product per 1,000 Sq. Ft.)	Application Interval (Days)	Application Instructions
Bermudagrass Decline (Gaeumannomyces graminis)	0.4	28	Use preventatively. Begir applications when conditions are favorable for disease infection prior to disease symptom development.
Brown Patch (Rhizoctonia solani)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Brown Ring Patch (Waitea circinata)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Cool Weather Brown Patch Yellow Patch (<i>Rhizoctonia</i> <i>cerealis</i>)	0.2 - 0.4	14-28	Make one or two applications in fall or when conditions are favorable for disease development.
Fairy Ring (Lycoperdon spp., Agrocybe pediades, Arachnion spp., Bovista spp., and Vascellum spp.)	0.4	28	Apply preventatively or as soon as possible after fairy ring symptoms develop Add the specified rate of a wetting agent to the final spray and water ir immediately with 1/8 to 1/4 inches of irrigation. Fairy ring symptoms may take 2 to 3 weeks to disappear following curative application Reapplication after 28 days may be required in some cases. Severely damagec or thin turf may require reseeding.

Target Diseases	Use Rate (Oz. Product per 1,000 Sq. Ft.)	Application Interval (Days)	Application Instructions
Fusarium Patch (<i>Microdochium</i> <i>nivale</i>)	0.2 - 0.4	14-28	Use preventatively. Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Gray Leaf Spot* (Pyricularia grisea)	0.2 - 0.4	14-28	Begin applications before disease is present and continue applications while conditions are favorable for disease development.
Gray Snow Mold Typhula Blight (Typhula incarnate, T. ishikariensis)	0.4	10-28	Make two applications of 0.4 oz. spaced 10-28 days apart in late fall just before snow cover. Tank mixing with another snow mold fungicide, such as chlorothalonii, may enhance control under severe disease pressure.
Leaf and Sheath Spot (Rhizoctonia zeae)	0.4	14-28	Apply when disease conditions are favorable for disease development.
Leaf Rust, Stem Rust, Stripe Rust (Puccinia spp.)	0.2 - 0.4	14-28	Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Leaf Spot (<i>Bipolaris</i> spp.)	0.2 - 0.4	14-21	Apply when conditions are favorable for disease development.
Melting Out (Drechslera poae)	0.2 - 0.4	14-21	Apply when conditions are favorable for disease development.
control of Gray Leaf	Spot and <i>Pythiur</i> op. are not prese	n spp. For all ont app	f Azoxy 50WDG Select for the other diseases when Gray Leaf ly more than three sequential
	-	15	(continued)

Target Diseases	Use Rate (Oz. Product per 1,000 Sq. Ft.)	Application Interval (Days)	Application Instructions
Necrotic Ring Spot (<i>Leptosphaeria</i> <i>korrae</i>)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Pink Patch (Limonomyces roseipellis)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Pink Snow Mold (Microdochium nivale)	0.4	10-28	Make two applications of 0.4 oz. spaced 10-26 days apart in late fall just before snow cover. Tank mixing with another snow mold fungicide, including chlorothalonil, may enhance control under severe disease pressure.
Powdery Mildew (Erysiphe graminis)	0.2 - 0.4	14-28	Begin applications wher conditions are favorable for disease infection prior to disease symptom development.
Pythium Blight, Pythium Root Rot* (Pythium aphanidermatum, Pythium spp.)	0.2 - 0.4	10-14	Use preventatively. Begir applications before diseases is present. During periods of prolonged favorable conditions, treat on the 10- day application interval. For use on newly seeded as wel as established turf.
control of Gray Leaf	Spot and <i>Pythiur</i> op. are not prese	n spp. For all ont app	f Azoxy 50WDG Select for the ther diseases when Gray Lead ly more than three sequentia

Target Diseases	Use Rate (Oz. Product per 1,000 Sq. Ft.)	Application Interval (Days)	Application Instructions
Pythium Root Dysfunction* (<i>Pythium volutum</i>)	0.4	21-28	Apply preventatively wher mean daily soil temperatures are between 55°F and 70°F Irrigate with 0.1 to 0.2 inches within 24 hours after applicatior to facilitate movement into the root zone.
Red Thread (<i>Laetisaria</i> fuciformis)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Rhizoctonia Large Patch (Rhizoctonia solani)	0.2 - 0.4	14-28	Make one or two applications in fall or when conditions are favorable for disease development. Spring applications may also be required in some locations or when disease pressure is high.
Southern Blight (Sclerotium rolfsii)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Summer Patch (<i>Magnaporthe</i> <i>poae</i>)	0.2 - 0.4	14-28	Apply when conditions are favorable for disease development.
Take-All Patch (Gaeumannomyces graminis)	0.2 - 0.4	28	Begin applications wher conditions are favorable for disease infection, prior to disease symptom development. Make two applications 28 days apart in the spring and two applications 28 days apart in the fall.
control of Gray Leaf	Spot and <i>Pythiur</i> p. are not prese	n spp. For all ont app	f Azoxy 50WDG Select for the ther diseases when Gray Lead ly more than three sequentia

Target Diseases	Use Rate (Oz. Product per 1,000 Sq. Ft.)	Application Interval (Days)	Application Instructions
Zoysia Patch (Rhizoctonia solani, Gaeumannomyces incrustans)	0.2 - 0.4	14-28	Apply 1 or 2 applications approximately one month prior to zoyia grass dormancy. Reapply 14 to 28 days later.

Table 2: Azoxy 50WDG Select Rate Conversion Chart for Turf

Oz. Product/1,000 Sq. Ft.	0z. A.I./1,000 Sq. Ft.	Oz. Product/Acre	Pounds Product/ Acre
0.20	0.10	8.7	0.5
0.30	0.15	13.1	0.8
0.40	0.20	17.4	1.1

Table 3: Amount of Azoxy 50WDG Select to Mix 100 Gallons for Turf Applications

Azoxy 50WDG	Spray Vo	olume (Gallons/1,00	0 Sq. Ft.)
Select Use Rate	2.0 gallons	3.0 gallons	4.0 gallons
0.2 oz.	10 oz.	6.7 oz.	5 oz.
0.4 oz.	20 oz.	13.3 oz.	10 oz.

DIRECTIONS FOR ORNAMENTALS

Azoxy 50WDG Select is registered for control of listed pathogens that cause foliar, aerial, and root diseases, including leaf, tip, and flower blights, leaf spots, downy mildew, powdery mildew, anthracnose, and rusts of ornamental plants. Azoxy 50WDG Select may be used to control certain diseases of container, bench, flat, plug, bed, or field-grown ornamentals in greenhouses, shade and lath houses, outdoor nurseries, retail nurseries, interiorscapes and other landscape areas.

Integrated Pest (Disease) Management (IPM)

Integrate Azoxy 50WDG Select into an overall disease management strategy that includes selection of varieties with disease tolerance, optimum plant populations, proper fertilization, winter and/or spring pruning, plant debris management, and proper timing and placement of irrigation. Immunoassay detection kits and diagnostic services can assist in the early and accurate identification of causal organisms and corresponding selection of the proper fungicide when required.

Application Directions

Apply Azoxy 50WDG Select as a foliar or soil broadcast, drench, or banded spray targeted at the foliage or crown of the plant. Apply to the point of runoff to ensure complete coverage of the target plant. Good coverage and wetting of foliage is necessary for best control. Refer to the label for specific use directions for control of certain diseases. Repeat applications at specified intervals using an appropriate resistance management program.

Apply Azoxy 50WDG Select at listed use rates. The addition of an adjuvant at the specified use rate may enhance coverage on hard-to-wet plant foliage. Under light to moderate disease pressure, use the lower listed rates and shorter listed application interval. Under environmental conditions conducive to severe disease development, use the higher rates and shorter listed application interval. Use of Azoxy 50WDG Select as a "rescue" (late curative or eradicant) treatment may not result in satisfactory disease control.

Drench Application

Azoxy 50WDG Select may be applied to control soil-borne, seedling, and crown diseases of ornamentals as a preventative drench treatment prior to infection. Good coverage of the pre-infection area (root zone, root ball, and crown) is necessary for satisfactory control. Azoxy 50WDG Select may be applied by drench to containergrown ornamentals.

Make a drench application prior to infection as healthy roots are necessary to optimize product uptake and systemic translocation to optimize disease protection. Due to the systemic activity of **Azoxy 50WDG Select**, suppression of certain foliar diseases has been observed in plants treated with drench applications.

Chemigation: Use through Sprinkler and Drip Irrigation Systems

Azoxy 50WDG Select may be applied through sprinkler, drip or other micro irrigation systems to potted ornamentals or to bedded, field-grown ornamentals for soil-borne disease control. Apply Azoxy 50WDG Select as a preventative treatment. The soil or potting media must have adequate moisture capacity prior to drip application.

Terminate irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, subsequent irrigation (water only) must be delayed for at least for 24 hours following application.

ORNAMENTAL USE RESTRICTIONS:

- DO NOT apply more than 10 lbs. (5 lbs. a.i.) product per crop acre per year.
- DO NOT make more than 8 applications of Azoxy 50WDG Select per year.
- DO NOT exceed 600 gallons spray volume per acre for foliar applications.
- DO NOT apply greater than 2 pints of solution per square foot for drench and crown applications.
- D0 NOT tank mix Azoxy 50WDG Select with other fungicides, insecticides, herbicides, fertilizers, or adjuvants unless local experience indicates that the tank mix will not injure ornamental plants.
- Resistance Management: D0 NOT make more than three (3) sequential applications of Azoxy 50WDG Select before alternating with a fungicide of a different mode of action. A sound resistance management program would include blocks of three Azoxy 50WDG Select applications separated by blocks of two alternate fungicide applications.
- · DO NOT alternate Azoxy 50WDG Select with other strobilurin fungicides.
- DO NOT apply Azoxy 50WDG Select to crabapple or cherry trees (including flowering and ornamental varieties, including Yoshino) due to possible phytotoxicity.
- DO NOT use spray equipment that has applied Azoxy 50WDG Select for use in these sensitive crops due to possible phytotoxicity from residue remaining in the sprayer.

ORNAMENTAL USE PRECAUTIONS:

Application of Azoxy 50WDG Select to crabapple may cause phytotoxicity.
 Azoxy 50WDG Select may be applied to specific non-sensitive varieties of crabapple. Azoxy 50WDG Select has been shown to be safer when applied to the species and varieties listed in Table 12. Due to the large number of species.

and varieties of crabapple, it is impossible to test every one for tolerance to Azovy SOWDG Select. Conduct small-scale testing to ensure plant safety prior to large-scale commercial use on plant species and varieties not listed on this label.

 Use caution before applying Azoxy 50WDG Select as a drench to small bedding plants in the seedling/plug stage due to possible phytotoxicity. Test a limited quantity of plants prior to full-scale application.

When used in accordance with the label directions, **Azoxy 50WDG Select** will provide control of the diseases of ornamental plants in the following table.

Table 4: Foliar Plant Diseases Controlled

(Azoxy 50WDG Select is sold in several product container sizes. For product container sizes of 8 oz. and larger, follow the mixing instructions in the second column. For the 4 oz. product container size, follow the mixing instructions in the third column in the following table.)

	Mixing Instructio	ns and Use Rates
DISEASE (Pathogen)	8 oz. and larger product container sizes (oz. product per 100 gallons)	4 oz. product container size (oz. product per 50 gallons)
CONIFER BLIGHTS		
Phomopsis Blight (Phomopsis juniperovora)	Apply 1-4 oz. every 7-28 days.	Apply 0.5-2 oz. every 7-28 days.
Tip Blight (Sirococcus strobilinus)	Apply 1-4 oz. every 7-28 days.	Apply 0.5-2 oz. every 7-28 days.
LEAF BLIGHTS/LEAF SPO	rs	
Alternaria Leaf Spot (Alternaria spp.)	Apply 1-8 oz. every 7-28 days.	Apply 0.5-4 oz. every 7-28 days.
Anthracnose (<i>Colletotrichum</i> spp., <i>Elsinoë</i> spp.)	Apply 1-8 oz. every 7-28 days.	Apply 0.5-4 oz. every 7-28 days.
Cercospora Leaf Spot (Cersospora spp.)	Apply 1-4 oz. every 7-28 days.	Apply 0.5-2 oz. every 7-28 days.

Table 6: Soil-Borne Diseases Controlled - Drench and Drip Irrigation

See Drench Application section of ORNAMENTAL DIRECTIONS FOR USE for additional drench directions.

Pathogen	Use Rate (oz. product/100 gallons)	Application Instructions
Fusarium spp. Rhizoctonia solani Sclerotium rolfsii	0.2-1.0 oz.	Apply 1-2 pints of the solution per square foot surface area every 7-28 days.
Sclerotinia spp.	1.0 oz.	Apply 1-2 pints of the solution per square foot surface area every 7-28 days. Apply for control of Sclerotinia by drench application only.

Table 7: Soil-Borne Diseases Controlled - Banded Applications

Pathogen	Use Rate (oz. product/1,000 row-feet) Application Instruction	
Fusarium spp. Rhizoctonia solani Sclerotium rolfsii Sclerotinia spp.	0.2-0.4 oz. ¹	Apply as a banded spray, 7 inches or less in width, directed to the soil using single or multiple spray nozzles adjusted to provide thorough coverage of lower stems ² and the soil surface.
When applications are applied to crops grown using 22-inch row spacing, the maximum application rate is 0.35 oz/1,000 row feet. ² Applications that come into contact with the foliage are considered foliar applications for resistance management.		

Table 8: Soil-Borne Diseases Controlled - In-furrow Application

Pathogen	Use Rate (oz. product/1,000 row-feet)	Application Instructions
Fusarium spp. Rhizoctonia solani Sclerotium rolfsii		Mount the spray nozzle to allow the spray mixture to be applied directly into
Suppression Only: Pythium spp.	0.2-0.3 oz.'	the furrow and before the propagated unit (seed, seed pieces, bulbs or corms) are covered by soil. Apply the higher listed rate when current or expected weather conditions are conducive for disease development.
¹ Apply product in 3 to 15 ga	allons of water per 1,000 row	/ feet.

Table 9: Soil-Borne Diseases Controlled - Broadcast Application

Pathogen	Use Rate (oz. product/A)	Application Instructions
Fusarium spp. Rhizoctonia solani Sclerotium rolfsii Sclerotinia spp.	2-16 oz.	Apply as a preventative broadcast application. Soil or potting media must have adequate moisture capacity prior to application if applied by overhead irrigation.

Table 10: Foliar and Soil Diseases Suppressed - Drench and Drip Applications

Disease/Pathogen	Use Rate (oz. product/100 gallons)	Application Instructions
Rusts Powdery Mildew <i>Pythium</i> spp.	0.45-1.0 oz.	Apply 1-2 pints of the solution per square foot surface area every 7-28 days.

Plant Safety

Azoxy 50WDG Select has been shown to be safe when applied to the ornamental plants listed in Tables 11 and 12 according to listed application methods, rates, and timings. Due to the large number of species and varieties of ornamental and nursery plants, it is impossible to test every one for tolerance to Azoxy 50WDG Select. Neither the manufacturer nor the seller has determined whether or not Azoxy 50WDG Select can be used safely on ornamental and nursery plants not specified on this label. Conduct small-scale testing to ensure plant safety prior to large-scale commercial for such varieties.

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill on floor or paved surfaces, sweep and remove to chemical waste storage area until proper disposal can be made if product cannot be used according to the label.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

CONTAINER HANDLING:

Container Handling [less than 50 pounds]: Non-refillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or by other procedures approved by State and local authorities.

Container Handling [bags]: Non-refillable container. Do not reuse or refill this container. Completely empty bag into application equipment. Then offer for recycling if available or dispose of empty bag in a sanitary landfill, or by incineration, or by other procedures approved by State and local authorities.

CONTAINER IS NOT SAFE FOR FOOD, FEED, OR DRINKING WATER.

LIMITATION OF WARRANTY AND LIABILITY

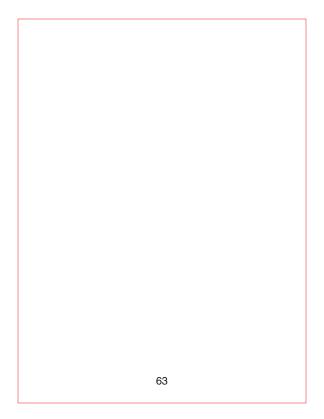

Read the entire direction for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once. By using this product, user or buyer accepts the following CONDITIONS, DISCLAIMER OF WARRANTIES, and LIMITATIONS OF LIABILITY.

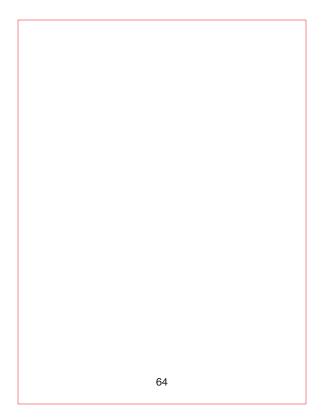

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risk associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Prime Source, LLC. To the extent consistent with applicable law, all such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: To the extent consistent with applicable law, Prime Source, LLC makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of Prime Source, LLC is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, Prime Source, LLC disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid or at Prime Source, LLC's election, the replacement of product.
