

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS WARNING Causes substantial but temporary eye injury. Do not get in eyes, on skin, or on clothing. Harmful if swallowed, inhaled, or absorbed through skin. Prolonged or frequently repeated skin contact may cause allergic reactions in some individuals. Avoid breathing spray mist. PERSONAL PROTECTIVE EQUIPMENT (PPE) Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category G on the EPA chemical resistance category selection chart. Applicators and other handlers must wear: Long-sleeved shirt and long pants Chemical-resistant gloves such as barrier laminate or viton Shoes plus socks Protective eyewear Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Discard clothing or other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. **Engineering Control Statements** Pilots must use an enclosed cockpit that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40CFR 160.240(d)(4-6)]. USER SAFETY RECOMMENDATIONS Users should: Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove clothing/PPE immediately if pesticide gets inside, then wash thoroughly and put on clean clothing. Remove PPE immediately after handling this product. Wash the outside of gloves before • removing. As soon as possible, wash thoroughly and change into clean clothing. ENVIRONMENTAL HAZARDS This product is toxic to fish and shrimp. Do not apply directly to water, or to areas where surface water is present, or to inter-tidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwater or rinsate. PHYSICAL OR CHEMICAL HAZARDS Combustible. Do not use, pour, spill, or store near heat or open flame. 2

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your state or tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

- Long-sleeved shirt and long pants
- Chemical-resistant gloves such as barrier laminate or viton
- Shoes plus socks
- Protective eyewear

GENERAL INFORMATION

AmTide Propiconazole 41.8% EC Fungicide contains the active ingredient, propiconazole, which provides control of a broad range of plant diseases in the listed crops, turf and ornamentals.

FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR DISEASE CONTROL, OR ILLEGAL RESIDUES.

GENERAL USE PRECAUTIONS

Rotation Crop Restrictions

To prevent possible illegal residues in crops grown in fields previously treated with AmTide Propiconazole 41.8% EC Fungicide, follow the plant back restrictions in the following table.

Number of Days to Wait E	Before Replanting After the Last Am Fungicide Application	Tide Propiconazole 41.8% EC
ANYTIME	75 Days	105 Days
Crops listed on this label	Alfalfa (the total amount of propiconazole must not exceed 0.22 lb Al/Acre in the previous vear)	Other crops grown for food, grazing or animal feeds.

INTEGRATED PEST MANAGEMENT

It is strongly advised that AmTide Propiconazole 41.8% EC Fungicide be used in a sound integrated pest management (IPM) program. Follow all cultural practices that aid in reducing disease development. Additional IPM strategies specific to your area is available from your state cooperative extension service, professional consultants or other qualified authorities. AmTide Propiconazole 41.8% EC Fungicide may be used in State Agricultural Extension advisory programs. These disease forecasting programs recommend timings for fungicide applications which are dependent on environmental factors which favor disease development.

RESISTANCE MANAGEMENT

There are inherent risks of diseases developing tolerance to any fungicide product; therefore it is strongly advised that AmTide Propiconazole 41.8% EC Fungicide be used in a sound resistance management program. AmTide Propiconazole 41.8% EC Fungicide belongs to the Group 3 class of fungicides which means that propiconazole acts as a demethylation inhibitor of sterol biosynthesis in the membranes of fungi. Resistance can develop whenever products with the same mode of action are used over and over in the same fields or crops. Follow the directions on this label for rotation of AmTide Propiconazole 41.8% EC Fungicides which are not in the Group 3 class and limitations on the number of applications per season of AmTide Propiconazole 41.8% EC Fungicide. Additional resistance management strategies may be obtained from your local or State agricultural authorities. Avoid alternating the use of or tank-mixing AmTide Propiconazole 41.8% EC Fungicide with other fungicides with known resistance to fungal diseases listed on this label.

SPRAY DRIFT MANAGEMENT

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, and relative humidity) and method of application can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

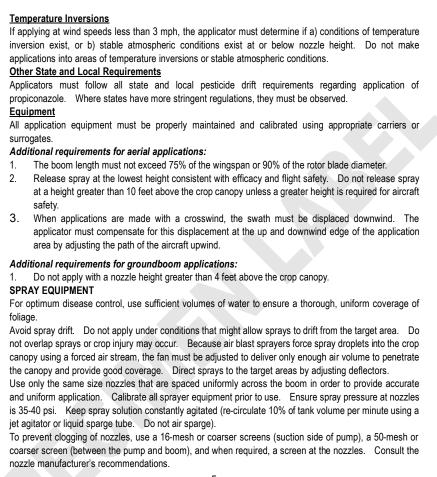

Wind Speed

Do not apply at wind speeds greater than 15 mph.

Droplet Size

Apply as a medium or coarser spray (ASAE Standard 572).

Refer to the manufacturer's recommendations for additional information on GPA, pressure, speed, nozzle types and arrangements, nozzle heights above the target canopy, etc. For specific local directions and spray schedules, consult state cooperative extension service, professional consultants or other qualified authorities.

PREPARATION OF SPRAY SOLUTIONS

To prepare a spray tank solution of AmTide Propiconazole 41.8% EC Fungicide, follow the steps below. Do not prepare more solution than is required for a day's work. Use only equipment that has been properly cleaned before use. Refer to the sections below on Tank Mixes.

- 1. Using clean fresh water, fill the spray tank $\frac{1}{2} \frac{2}{3}$ full.
- 2. Begin agitation and then add the required amount of AmTide Propiconazole 41.8% EC Fungicide. If tank mix partners are to be included, be sure that all partner products are compatible as a tank mix with AmTide Propiconazole 41.8% EC Fungicide (refer to the Compatibility Test, below). Once compatibility has been determined, use the following order of addition: wettable powders and water dispersible granular formulations, liquid flowables, AmTide Propiconazole 41.8% EC Fungicide. and then emulsifiable concentrates.
- 3. Allow the solution to agitate for 5 minutes to completely mix the water and formulation.
- 4. Continue agitation and fill the spray tank with the remaining water.
- 5. Agitate the solution continuously until the application operation is complete.
- 6. At the end of the day, rinse the spray tank with clean water. The pesticide rinsate may be disposed of by applying to an area which has been treated with AmTide Propiconazole 41.8% EC Fungicide.

Tank Mixes

AmTide Propiconazole 41.8% EC Fungicide may also be applied with other fungicides, insecticides or herbicides. Before mixing or applying any of these tank mixtures, carry out a Compatibility Test (see below). It the tank mix partner is considered to be compatible with AmTide Propiconazole 41.8% EC Fungicide, prepare tank mixtures as recommended above and follow the proper order of addition to the spray tank.

When applying AmTide Propiconazole 41.8% EC Fungicide as a tank mixture, observe all tank mix partner label directions for use, crops and use sites, application rates, dilution ratios, precautions, and limitations. Use the labeling that has the most restrictive label precautions and limitations. Do not mix AmTide Propiconazole 41.8% EC Fungicide with any product that restricts tank mixing.

To avoid crop injury, do not mix AmTide Propiconazole 41.8% EC Fungicide with Syllit[®]. Compatibility Test

Before adding AmTide Propiconazole 41.8% EC Fungicide or other products to a spray tank, carry out a compatibility test. Use a quart jar with a lid and add proportionate amounts of each ingredient with 1 quart of water to the jar. Use the following order for addition: wettable powders and water dispersible granular formulations, liquid flowables, and then emulsifiable concentrates. Cap the jar and shake for 5

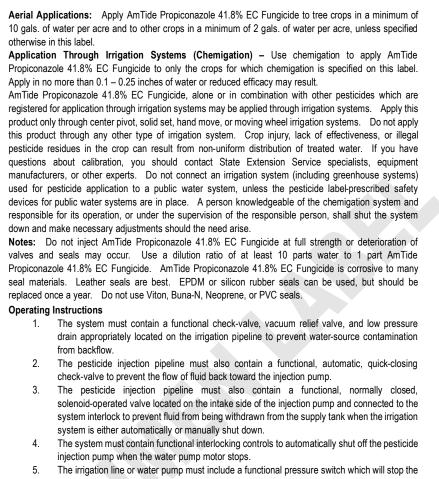

minutes. Let the mixture sit for 5 minutes. If the mixture forms a precipitate that cannot be re-dispersed or mixes poorly, then the mixture should not be used. If the mixture stays mixed or remixes readily after standing, the mixture is physically compatible.

APPLICATION INSTRUCTIONS

Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow AmTide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event. Do not apply when conditions prevent a uniform coverage of crop canopy or if spray drift may occur. **Ground Application:** Apply AmTide Propiconazole 41.8% EC Fungicide to tree crops in a minimum of 50 gals. of water per acre and to other crops in a minimum of 10 gals. of water per acre, unless specified otherwise in this label.

 The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

 Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended.
Center Pivot Irrigation Equipment
Notes: (1) Use only drive systems which provide uniform water distribution. (2) Do not use end guns when chemigating AmTide Propiconazole 41.8% EC Fungicide through center pivot systems
because of non-uniform application.
 Determine the size of the area to be treated. Determine the time required to apply -½ inch of water over the area to be treated when the system and injection equipment are operated at normal pressures as recommended by the equipment manufacturer. When applying AmTide Propiconazole 41.8% EC Fungicide through irrigation equipment, use the lowest obtainable water volume while maintaining uniform distribution. Run the system at 80-95% of the manufacturer's rated capacity. Using water, determine the injection pump output when operated at normal line pressure. Determine the amount of AmTide Propiconazole 41.8% EC Fungicide required to treat the
 area covered by the irrigation system. Add the required amount of AmTide Propiconazole 41.8% EC Fungicide and sufficient water
 to meet the injection time requirements to the solution tank. Make sure the system is fully charged with water before starting injection of the AmTide Propiconazole 41.8% EC Fungicide solution. Time the injection to last at least as long as it takes to bring the system to full pressure.
 Maintain constant solution tank agitation during the injection period. Continue to operate the system until the AmTide Propiconazole 41.8% EC Fungicide solution has cleared the sprinkler head.
Solid Set, Hand Move, and Moving Wheel Irrigation Equipment
 Determine the acreage covered by the sprinklers. Fill injector solution tank with water and adjust flow rate to use the contents over a 20 to 30-minute interval. When applying AmTide Propiconazole 41.8% EC Fungicide through irrigation equipment, use the lowest obtainable water volume while maintaining uniform distribution.
 Determine the amount of AmTide Propiconazole 41.8% EC Fungicide required to treat the
area covered by the irrigation system.Add the required amount of AmTide Propiconazole 41.8% EC Fungicide into the same
quantity of water used to calibrate the injection period. 9

• Operate the system at the same pressure and time interval established during the calibration.

• Stop injection equipment after treatment is completed. Continue to operate the system until the AmTide Propiconazole 41.8% EC Fungicide solution has cleared the last sprinkler head.

Rate of AmTide Propiconazole 41.8% EC Fungicide	Directions for Application	Restrictions
<u>FI. Oz. per Acre</u> 2-4	Early Season Suppression of Powdery Mildew, Leaf Blight, Glume Blotch, and Tan Spot: Apply by air, ground or chemigation. For season-long control, make application in the spring and make one repeat application up to Feeks growth stage 10.5. Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow AmTide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event.	Maximum application rate per season: 4 fl. oz./Acre per season when forage or hay is harvested; 8 fl. oz./Acre per season AmTide Propiconazole 41.8% EC Fungicide (equivalent to a total of 0.22 lb. a.i./Acre per season of any product that contains propiconazole).
4	Control of Leaf Diseases – Rust, Powdery Mildew, Leaf Blight, Glume Blotch, Tan Spot, Helminthosporium Leaf Blight, Spot Blotch, Barley Scald, Barley Stripe, Net Blotch: Apply by air, ground or chemigation. Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage, especially the flag leaf. Optimum yields are obtained when AmTide Propiconazole 41.8% EC Fungicide is applied when the flag leaf is between 50% and 100% emerged. For best results, allow AmTide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event. Improved spray coverage and canopy penetration is achieved using an oil-based adjuvant. Foot Rot: Apply AmTide Propiconazole 41.8% EC Fungicide as a tankmix with half the rates of other EPA registered fungicides (such as Topsin® M) to crops at tillering but prior to elongation. Suppression of Fusarium Head Blight: Apply AmTide Propiconazole 41.8% EC Fungicide close to 50% flowering. Increased suppression may result by adding a penetrating-type adjuvant.	Minimum Days Between Treatments: 14 days. Preharvest Interval (PHI): 30 days forage, 40 days grain and straw, 45 days hay.
	22

2.5-4 4	Early Leaf Spot Late Leaf Spot, Rust, Web Blotch Apply by ground, air or chemigation 35-40 days after crop is planted or when disease is detected, and reapply at 10 to 14 day intervals. For severe early leaf spot pressure, use the highest rate. AmTide Propiconazole 41.8% EC Fungicide also may be used when State Agricultural Extensions provide advisories that recommend applications be made based on environmental factors that lead to disease development.	Maximum application rate per season: 16 fl. oz./Acre per season AmTide Propiconazole 41.8% EC Fungicide (equivalent to a total of 0.45 lb. a.i./Acre per season of any product that contains propiconazole). Preharvest Interval (PHI): 14 days (4 fl. oz./Acre) or 21 days (8 fl. oz./Acre).

Propiconazole 41.8% EC Fungicide Fl. Oz. per Acre	Directions for Application	Restrictions
Refer to text	 Southern Stem Rot: Use one of the application schedules below: 4 fl. oz./Acre of AmTide Propiconazole 41.8% EC Fungicide: apply to the crown and pegging zones of the plant by chemigation or directed ground application about 45 days after planting, or at the first signs of disease. Reapply at 14 day intervals. 8 fl. oz./Acre of AmTide Propiconazole 41.8% EC Fungicide: apply to the crown and pegging zones of the plant by chemigation or directed ground application about 45 days after planting, or at the first signs of disease. Reapply at 14 day intervals. 8 fl. oz./Acre of AmTide Propiconazole 41.8% EC Fungicide: apply to the crown and pegging zones of the plant by chemigation or directed ground application about 60 days after planting (at pegging) or at the first sign of disease. Make one repeat application 3-4 weeks after the first application. Irrigation: To apply AmTide Propiconazole 41.8% EC Fungicide in irrigation water, use a minimum of 0.25-0.5 inches of irrigation water/Acre. Sufficient water is required in order for the fungicide to penetrate the canopy of peanut foliage and reach the crown of the plant (Southern Stem Rot is most active at this part of the plant). Additional treatment methods should be used to control leaf spot if AmTide Propiconazole 41.8% EC Fungicide is applied by irrigation or as a directed ground application. 	Do not feed livestock hay harvested from fields treated at the 8 fl. oz./Acre rate.

Rate of AmTide Propiconazole 41.8% EC Fungicide FI. Oz. per Acre	Directions for Application	Restrictions
6-10	 Apply only by aerial application (minimum 5-10 gal. water/Acre). Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow AmTide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event. For assistance in determining the appropriate time for application of AmTide Propiconazole 41.8% EC Fungicide, consult local extension experts who can provide information on local economic thresholds established for various rice varieties and diseases. Use one of the application schedules below: Use 6 fl. oz. at first internode elongation (up to 2-inch panicle). Make a second application at swollen boot 14 days after the first application but before the boot splits and head emerges. For optimum control of sheath blight, make first application when disease develops, when 5% or fewer of the tillers are infected. 	Maximum application rat per season: 12 fl. oz./Acr per season AmTid Propiconazole 41.8% Er Fungicide (equivalent to total of 0.34 lb. a.i./Acre per season of any product that contains propiconazole). Preharvest Interval (PHI 35 days Do not apply to stubble of ratoon crop rice. Do not use in rice fields when corayfish will be practiced. Do not drain watter from treated rice fields into pond used for commercial fis farming. Do not use water drained from treated fields to irrigate othe crops. The active ingredient(s) in th product may have effects of federally listed threatened of endangered species or critici habitat in some counties.

6-8 Wild Rice (MN only)	 Use 10 fl. oz./A at first internode elongation (up to 2-inch panicle). This rate is recommended if greater than 10% of the tillers are infected with sheath blight. If disease reappears, follow the AmTide Propiconazole 41.8% EC Fungicide application with a different registered fungicide. Tank mixes: 6 fl. oz./Acre of AmTide Propiconazole 41.8% EC Fungicide in a tank mix with other fungicides (such as Quadris) to control rice diseases. Apply only by aerial application. Make two applications no less than 10 days apart at 6 fl. oz./Acre of AmTide Propiconazole 41.8% EC Fungicide at booting and then at heading. Alternatively, make one application at 8 fl. oz./Acre at booting. Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow AmTide Propiconazole 41.8% EC Fungicide sto dry on foliage before a rainfall event. 	When using this product, you must follow the measures contained in the County Bulletin for the county which you are applying the pesticide. To determine whether your County has a Bulletin, consult <u>http://www.epa.gov/espp/usa-map.htm</u> . Bulletins also may be available from local pesticide dealers, extension offices, or State pesticide agencies.

3.4	Apply by ground (minimum of 15 gal./Acre) or by air (minimum 10 gal. water/Acre) just before flowering. Make up to four additional applications at 5 to 7 day intervals. Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow AmTide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event.	Maximum application rate per season: 8 fl. oz. of AmTide Propiconazole 41.8% EC Fungicide (0.22 lb propiconazole a.i.) on sorghum harvested for forage; 16 fl. oz./Acre per season AmTide Propiconazole 41.8% EC Fungicide (equivalent to a total of 0.45 lb. a.i./Acre per season of any product that contains propiconazole). Preharvest Interval (PHI): 30 days for forage, 21 days for grain and stover. Do not graze livestock or cut for green chop or silage within 30 days of application.
	SOYBEANS	
<u>Diseases:</u> Aerial Web Blight (Rhize Anthracnose (Colletotric Brown Spot (Septoria g	chum truncatúm) Soybean Rust	Spot (Cercospora sojina) (Phakopsora pachyrhizi)
Rate of AmTide Propiconazole 41.8% EC Fungicide FI. Oz. per Acre	Directions for Application	Restrictions
4-6	Apply by ground or by air. Use sufficient volumes of water to ensure a thorough, uniform coverage of foliage. For best results, allow AmTide Propiconazole 41.8% EC Fungicide residues to dry on foliage before a rainfall event. Best results from aerial applications are obtained by using an oil-based additive that improves foliar coverage and penetration of crop canopy.	Maximum application rate per season: 12 fl. oz./Acre per season AmTide Propiconazole 41.8% EC Fungicide (equivalent to a total of 0.34 lb. a.i./Acre per season of any product that contains propiconazole). Do not apply after Stage R6.

FI. Oz. per Acre Aerial Web Blight: Time applications to occur when disease first develops and apply 5-6 fl. oz./Acre. Make one repeat application at 14 to 21 days interval. Use the highest rate and shorter spray interval when disease conditions are severe. Other foliar diseases: Time applications to begin at growth stage R3 (early pod set: pods are 1/8-1/4 inch long) and apply 6 fl.	
oz./Acre. Make one repeat application at 14 to 21 days interval when growth stage is R5 (pod fill). Soybean rust : Time applications to occur when disease has been reported in the area since preventative applications will provide the best results. Use 4-6 fl. oz./Acre. Make repeat applications at 14 to 21 day intervals. Use the highest rate and shorter spray interval when disease is detected in the field or if less than 2 out of every 100 plants are infected. Control will be less than acceptable when more plants are infected or if the disease is in mid-canopy. Use scouting and monitoring techniques to determine disease infestations and its proximity to your fields. NOTE: Some varieties may develop crinkled, smaller and/or greener leaves from applications of AmTide Propiconazole 41.8% EC Fungicide, however, dry bean yields are not reduced as a result of the AmTide Propiconazole 41.8% EC Fungicide applications.

NOTE: These directions do not apply to tank mixes containing spray additives. If spray additives are added to tank mixes, check that they are compatible before use. TURFGRASS AND DICHONDRA DISEASE CONTROL GENERAL RECOMMENDATIONS AmTide Propiconazole 41.8% EC Fungicide should be used in a preventative disease control program and in conjunction with a turf disease management program. Before applying a fungicide, be sure that the correct disease has been identified so that the correct treatment is followed. USE DIRECTIONS AND RATES: AmTide Propiconazole 41.8% EC Fungicide must be applied in sufficient amounts of water to ensure a thorough, uniform coverage of the turfgrass. Do not apply until grass has been mowed, or apply and then allow sprays to dry completely before mowing. Refer to the table below for rates and application directions for various diseases. Optimum control is achieved with the higher specified rate and shorter spray interval if conditions for high disease pressure exist. Foliar diseases: Do not irrigate until turfgrass has completely dried. Soil-borne diseases: Irrigation or watering-in is allowed after application of AmTide Propiconazole 41.8% EC Fungicide. Bermudagrass: To prevent injury to any of the varieties of bermudagrass, do not apply more than 1.44 fl. oz./1.000 sq. ft. AmTide Propiconazole 41.8% EC Fungicide every 30 days. In FL, do not apply AmTide Propiconazole 41.8% EC Fungicide to bermudagrass golf course greens if temperatures are above 90° F. **RESTRICTIONS:** Do not apply this product through any type of irrigation system . Do not graze animals on treated areas. Do not feed clippings from treated areas to livestock or poultry. Do not apply more than 5.8 fl. oz./1,000 sq. ft. of AmTide Propiconazole 41.8% EC Fungicide per calendar year. Do not apply more than 1.79 lb. a.i. propiconazole per Acre per application. Turfgrass – Specific Rates, and Application Directions for Different Diseases Rate AmTide Propiconazole 41.8% EC Fungicide, Fl. Oz. per 1,000 Sq. Ft. **Application Directions** (FI.
