LICHENS FROM EVOLENE AND SURROUNDINGS (SWITZERLAND)**Abstract**

An annotated list of 591 taxa of lichens and lichenicolous fungi found during a field meeting in 1990 in the Val d'Hérens and surroundings, Canton de Valais, Switzerland, is presented.

Introduction

The 1990 biennial summer field meeting of the "Bryologische en Lichenologische Werkgroep der KNNV" (the Dutch Bryological and Lichenological Working group), held from 20 to 30 July, was based in Evolène, Val d'Hérens, Canton de Valais, in Switzerland. It was a combined meeting with the "Schweizerische Vereinigung für Bryologie und Lichenologie", and five Dutch and three Swiss with principal interest in lichens attended all or part of the meeting. They collected and identified c. 591 taxa in the Val d'Hérens and surroundings, which are presented in the list below.

Remarkably little has been published so far on the lichen flora of the Val d'Hérens and indeed of all Canton de Valais. No enumeration of lichens of any of the tributary valleys seems to exist, and the well-known works of Gams (1927) and Buschardt (1979), the most important sources for lichen-floristic data on Valais, give only a very fragmentary impression of the lichen flora, and do not treat the Val d'Hérens. Occasionally, a few records can be found in recent taxonomic treatments, e.g. v.d. Boom (1992), Breuss (1990), S. Hyvönen & J. Hyvönen (1985), Laundon (1989), Lumbsch (1989), H. Mayrhofer (1987), M. Mayrhofer (1988), Mayrhofer & Poelt (1979), Poelt (1983).

Investigation area

The Canton de Valais is situated in the centre of the Alps. It falls apart in a northern and a southern mountain area separated by an approximately east-west-running valley through which the Rhône flows. This valley, with a length of c. 160 km and a width of several km, at an altitude of c. 500 m, constitutes a lowland plain in the middle of the high mountains. In the north and south of this valley, alpine mountain slopes steeply raise to 2000 - 3000 m, intersected by narrow tributary valleys running in north-south direction. On the south side these are a.o. Val d'Hérémence, Val d'Hérens and Val d'Anniviers, the valleys visited during the meeting.

Geologically the Val d'Hérens can be divided into three different sections: In the southernmost, upper part, in the surroundings of Arolla and the Val Ferrière, granites and gneisses of the alpine bedrock are exposed. In the central part, around Evolène, the rocks are of mesozoic origin: quartzites and limestone of Triassic origin, and a series of Jurassic shales and calcareous shales known as "Bündnerschiefer". These rocks are highly metamorphic, and due to changes in mineral composition and direction of the minerals they are schistose. Moreover, they are usually rather basic. In the northernmost, lowest part of the valley, near Thyon, mainly gneisses, glimmerschists and phyllites can be found, which are equally schistose and usually basic.

The precipitation is strongly correlated with the elevation. Down in the Rhône valley, it is less than 600 mm/y. High in the mountains, e.g. at Dent Blanche, more than 3200 mm/y are measured. However, the evaporation increases also with altitude. In addition, local topography very strongly influences the climatic conditions. Thus south-exposed slopes are generally very dry, even high in the mountains, whereas north-facing slopes are much cooler and more humid, even in the Rhône valley.

These geological and climatic circumstances are reflected in the vegetation. In the lowest parts of the Val d'Hérens, with a warm and dry climate, *Pinus sylvestris* forest predominates. From the montane zone upward to about 1800 m, the forests are dominated by *Larix decidua* and *Picea abies*. The subalpine zone, c. 1800 - 2200 m, in the upper part of the valley has forest composed of *Pinus cembra* and *Larix decidua*, while at the timberline *Pinus mugo* may be found. The timberline is often lowered due to cattle grazing. Further important human influences are ski pistes and artificial lakes.

Collecting sites

Since the meeting was based in Evolène, most excursions were made in the Val d'Hérens. However, a few trips were made in the neighbouring Val d'Hérémence and Val d'Anniviers (Fig. 1). The collecting sites are located between 1350 m and 2700 m. The following list, in chronological order, contains more detailed information. For observer abbreviations, see below.

Val d'Hérens

1. SE of Evolène, SSE of Ferrière, E-facing slope above La Borgne; exposed heathland with granite boulders. Grid ref. 608,6/100,5. Alt. 1950 m. 18 July 1990. Observer: PB.
2. SE of Evolène, SE of Ferrière, 500 m WSW of Bricola, near glacier; open area, overhang and granite boulders. Grid ref. 609,4/99,4. Alt. 2150 m. 18 July 1990. Observer: PB.

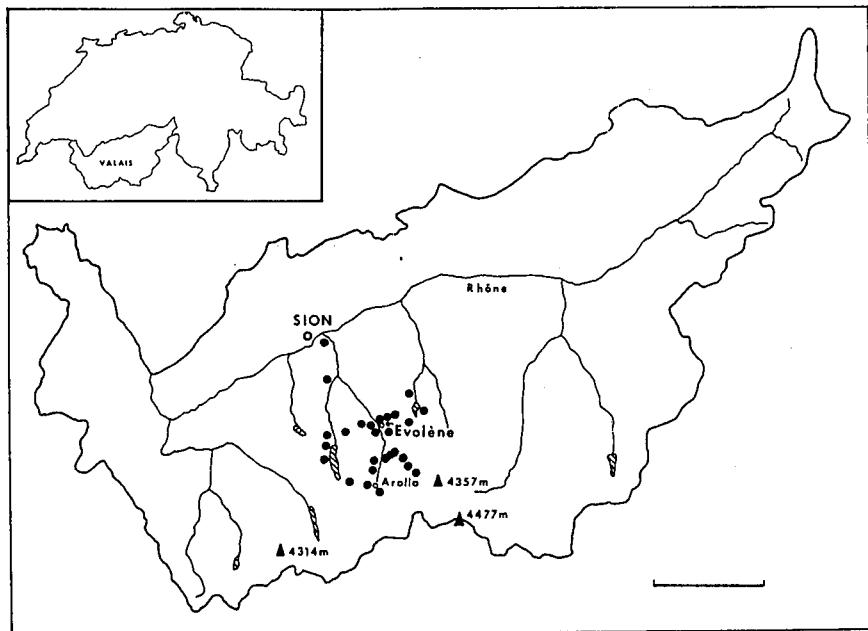

Fig. 1: Indication of some of the study areas (scale = 20 km)

3. SE of Evolène, Ferpècle, NW of storage lake; SW-facing slope with *Larix* forest near parking lot. Grid ref. 608,5/101,3. Alt. 1850 m. 18 July 1990. Observer: PB.
4. W of Evolène, S of Lana; N-facing slope with *Larix-Picea* forest and calcareous schist boulders. Grid ref. 603,3/107,2. Alt. 1500 m. 19 July 1990. 2 Aug. 1990. Observers: PB, LS.
5. W of Evolène, S of Lana; N-facing slope with *Larix-Picea* forest and calcareous schist boulders. Grid ref. 603,2/107,3. Alt. 1540 m. 19 July 1990. Observer: PB.
6. W of Evolène, Verne; N-facing slope and edge with *Larix-Picea* forest and calcareous schist boulders in meadow. Grid ref. 601,9/107,0. Alt. 1780 m. 19 July 1990. Observer: PB.
7. W of Evolène, Barati; E-facing slope, village and calcareous schist boulders in meadow. Grid ref. 601,8/107,7. Alt. 1850 m. 19 July 1990. Observer: PB.

Val d'Hérémence

8. S of Sion, SW of Thyon, La Combière, near cableway; exposed heathland and shaded vertical faces along path. Grid ref. 594,3/114,3. Alt. 2090 m. 20 July 1990. Observer: PB.
9. S of Sion, SW of Thyon, La Combière; E-facing slope and shaded vertical faces along path. Grid ref. 594,3/113,8. Alt. 2100 m. 20 July 1990. Observer: PB.
10. S of Sion, SW of Thyon, La Combière; exposed heathland with granite boulders near little lake. Grid ref. 593,8/112,5. Alt. 2110 m. 20 July 1990. Observer: PB.
11. S of Sion, SW of Thyon, La Combière; E-facing slope with rock outcrops along path. Grid ref. 593,8/112,8. Alt. 2110 m. 20 July 1990. Observer: PB.

Val d'Hérens

12. S of Evolène; little *Alnus* forest along river La Borgne. Grid ref. 604,6/105,8. Alt. 1350 m. 20 July 1990. Observer: PB.
13. S of Evolène, between Les Haudères and Arolla, S of La Gouille; SE-facing slope with acid boulders in meadow. Grid ref. 603,9/99,9. Alt. 1820 m. 21 July 1990. Observers: PB, LS.
14. S of Evolène, N of Arolla, Pramousse; E-facing slope with acid boulders, *Larix* trees and vertical rockfaces. Grid ref. 603,7/98,7. Alt. 1850 m. 21 July 1990. Observers: PB, LS.

Val d'Hérémence

15. N of Lac des Dix, Mayentset; E-facing slope along road, and damp, shaded, acid boulders along stream. Grid ref. 596,9/105,3. Alt. 1700 m. 22 July 1990. Observer: PB.
16. NW of Lac des Dix; E-facing slope with exposed weakly calcareous schist outcrops above storage lake. Grid ref. 596,8/103,2. Alt. 2420 m. 22 July 1990. Observer: PB.

Val d'Hérens

17. SSE of Evolène, La Tour; *Alnus-Sorbus* wood along stream. Grid ref. 605,3/105,5. Alt. 1410 m. 22 July 1990. Observer: PB.
18. S of Evolène, W of Arolla; *Pinus-Larix* forest and shaded vertical rockfaces along path, near hotel. Grid ref. 603,2/97,3. Alt. 2050 m. 23 July 1990. Observers: PB, HD, PK.
19. S of Evolène, W of Arolla; *Pinus-Larix* forest and little *Salix* forest. Grid ref. 603,1/96,8. Alt. 2050 m. 23 July 1990. Observers: PB, HD, PK, LS.
20. S of Evolène, W of Arolla; exposed hilly area with calcareous schist and granite near stream. Grid ref. 603,0/96,5. Alt. 2100 m. 23 July 1990. Observers: PB, HD, PK.
21. E of Evolène; E-facing exposed meadow with barns and calcareous schist. Grid ref. 604,2/106,5. Alt. 1400 m. 23 July 1990. Observer: PB.
22. E of Evolène; E-facing *Larix-Picea* forest with shaded vertical rockfaces along path and calcareous schist outcrops. Grid ref. 603,9/106,3. Alt. 1520 m. 23 July 1990. Observer: PB.

Val d'Anniviers

23. S of Sierre, SE of Lac de Moiry, Fête d'Août de Chateaupré; alpine pasture, W-facing slope with exposed granite and calcareous schist boulders in glacier deposits in valley. Grid ref. 610,9/106,2. Alt. 2360 m. 24 July 1990. Observers: PB, HD, PK, HS, LS.
24. S of Sierre, N of Lac de Moiry, Moretta; E-facing slope with subalpine dwarfscrub and shaded calcareous schist outcrops and gneiss boulders. Alt. 2100 m. Grid ref. 609,8/111,0. 24 July 1990. Observers: PB, HD, PK, HS, LS.

Val d'Hérens

25. S of Evolène, W of Arolla, along path to Pas de Chèvres. Grid ref. 599,7/96,2. Alt. 2700 m. 24 July 1990. Observer: G. Harmsen.
26. SE of Evolène, La Sage; W-facing slope with fence posts and calcareous schist outcrops in meadow. Grid ref. 606,1/105,3. Alt. 1720 m. 25 July 1990. Observers: PB, HS.
27. SE of Evolène, La Sage; W-facing slope with *Picea-Larix* forest and shaded vertical calcareous rock faces above the village. Grid ref. 606,3/105,3. Alt. 1800 m. 25 July 1990. Observers: PB, HS, LS.
28. SE of Evolène, La Sage; W-facing slope with *Larix* forest and shady blockstream. Grid ref. 606,4/105,2. Alt. 1840 m. 25 July 1990. Observers: PB, HS.
29. S of Evolène, SE of Les Haudères, at trail along river La Borgne de Ferpècle; N-facing slope with *Picea-Larix* forest and shaded vertical rock faces. Grid ref. 605,9/103,2. Alt. 1500 m. 25 July 1990. Observers: PB, HS.
30. S of Evolène, SE of Les Haudères, along river La Borgne de Ferpècle; N-exposed sloping meadow with *Acer* and well-lit schist outcrops. Grid ref. 606,1/103,2. Alt. 1540 m. 25 July 1990. Observers: PB, HD, PK, HS.
31. S of Evolène, SE of Les Haudères, along river La Borgne de Ferpècle; NE-facing slope with *Larix-Picea* forest, *Sorbus*, and calcareous rock outcrops. Grid ref. c. 606,3/103,0. Alt. 1540 m. 25 July 1990. Observers: PB, HD, PK, HS.
32. 1 km W of Evolène, Arbez; *Picea-Larix* forest and clearings on N- and E-facing slope between village and Evolène. Grid ref. c. 603,5/106,5. Alt. 1400 m. 26 July 1990. Observers: HD, PK, HS, LS.
33. S of Evolène, Arolla, along trail to Pas de Chèvres, S-side of Plan Tsardon; alpine meadows with calcareous schist boulders on SW-facing slope. Grid ref. c. 602,0/97,0. Alt. 2300-2500 m. 27 July 1990. Observers: HD, PK, HS, LS.
34. c. 4 km S of Evolène, Les Haudères, Forêt de Tauge; *Picea-Larix* forest on N-facing slope. Grid ref. c. 605,5/103,0. Alt. c. 1650 m. 28 July 1990. Observers: HD, PK, HS, LS.
35. W of Lac des Dix, W of La Barma; E-facing slope. Grid ref. 595,3/101,2. Alt. 2560 m. 30 July 1990. Observer: LS.
36. ESE of Evolène, path from Le Tsaté to Lac de Moiry, Col du Tsaté. Grid ref. 609,4/105,4. Alt. 2870 m. 31 July 1990. Observer: LS.

37. W of Evolène, Les Arpilles. Grid ref. 600,4/106,1. Alt. 2370 m. 1 Aug. 1990. Observer: LS.
38. Evolène, shore of Borgne, granite boulder in open valley. Grid ref. 604,3/106,4. Alt. 1350 m. 29 July 1990. Observer: MB.
39. 1 km SW of Evolène, vertical N face in *Larix* wood on NE slope, limestone rocks. Grid ref. 603,9/105,8. Alt. 1620 m. 29 July 1990. Observer: MB.
40. 1 km W of Evolène, large block of calcareous schist in meadow. Grid ref. 603,4/106,6. Alt. 1470 m. 29 July 1990. Observer: MB.
- Val d'Hérennes
41. W of Lac de Dix, c. 0.3 km W of La Barna, alpine meadow with calcareous schist. Grid ref. c. 595,6/101,1. Alt. 2500 m. 30 July 1990. Observer: MB.
- Val d'Hérens
42. 4 km W of Arolla, Col de Riedmatten, S-exposed acid schistose rock. Grid ref. 599,5/96,2. Alt. 2920 m. 30 July 1990. Observer: MB.
43. SE of Evolène, 3.8 km SE of Les Haudères, Ferrière, on SW slope with large boulders. Grid ref. 608,5/101,4. 31 July 1990. Alt. 1860 m. Observer: MB.
44. E of Sion, Tourbillon, steep S-exposed rockface with schist and top of dry hill with brittle gneiss. Grid ref. c. 594,4/120,4. Alt. 600 m. 31 July 1990. Observer: MB.
45. 0.5 km SE of Evolène, W-exposed shaded limestone rock. Grid ref. 604,8/106,4. Alt. 1400 m. 31 July 1990. Observer: MB.
46. 3.5 km WNW of Evolène, Artsinol, exposed E-facing slope with gneiss. Grid ref. 601,1/107,7. Alt. 2200 m. 1 August 1990. Observer: MB.
47. 4.1 km WSW of Evolène, 1.1 km SW of Vouasson, W-exposed rounded gneiss rocks, more or less sheltered. Grid ref. 600,4/105,8. Alt. 2380. 1 August 1990. Observer: MB.
48. 5.2 km W of Evolène, 0.2 km NE of Col de la Meina, schistose rock at shore of little lake. Grid ref. 599,3/105,8. Alt. 2640 m. 1 August 1990. Observer: MB.
49. 0.8 km SW of Evolène, *Larix* wood on NE slope with vertical face of block composed of calcareous schist. Grid ref. c. 603,9/106. Alt. c. 1560 m. 2 August 1990. Observer: MB.
50. 1.9 km NW of Evolène, *Picea-Larix* wood on NE slope with blocks of calcareous schist. Grid ref. c. 603/108. Alt. 1350 m. Observer: MB.
51. SE of Evolène, 5 km SE of Les Haudères, Ferrière, schiststones in small brook in open landscape. Grid ref. 608,8/100,1. Alt. 1950 m. 2 August 1990. Observer: MB.
52. 1.5 km W of Evolène, near lake of Arbey, base of *Picea* at edge of wood. Grid ref. 602,7/106,9. Alt. 1770 m. 3 August 1990. Observer: MB.
53. S of Evolène, 0.6 km SW of Haudères, *Acer* in hay-field. Grid ref. 605,1/105,1. Alt. 1460 m. 3 August 1990. Observer: MB.
54. S of Evolène, 1.1 km WSW of Haudères, W of road to Arolla, *Larix* wood on E slope with schistose rock in dry gully of brook. Grid ref. 604,3/103,1. Alt. 1780 m. 3 August 1990. Observer: MB.
55. S of Evolène, 2 km WSW of Les Haudères, outside tunnel in road to Arolla, E-exposed steep rocks. Grid ref. 604/102,1. Alt. 1800 m. 3 August 1990. Observer: MB.
56. S of Evolène, 2.7 km SSE of Arolla, W slope with steep to overhanging acid rock. Grid ref. 604,4/94,5. Alt. 2280 m. 4 August 1990. Observer: MB.
57. S of Evolène, 3.3 km SSE of Arolla, along path to Bertol, on siliceous stones in small brook. Grid ref. 604,7/93,8. Alt. 2380 m. 4 August 1990. Observer: MB.
58. 2.3 km ENE of Evolène, 1.2 km SW of Col de Torrent, large block of calcareous schist on SW slope, bird's perch. Grid ref. 606,6/107,6. Alt. 2380 m. 6 August 1990. Observer: MB.
59. 3.9 km ENE of Evolène, Col de Torrent, alpine grassland with calcareous schist. Grid ref. 607,2/108,7. Alt. c. 2920 m. 6 August 1990. Observer: MB.
60. 2 km NE of Evolène, Beplan, alpine grassland with large erratic block of acid schist. Grid ref. 605,5/107,4. Alt. 2180 m. 6 August 1990. Observer: MB.
61. c. 1.2 km SW of Evolène, NE slope, near edge of *Larix* wood, rotting trunk of *Picea* and calcareous schist in bed of dry brook. Grid ref. c. 603,6/106,7. Alt. 1740 m. 7 August 1990. Observer: MB.
62. c. 1.7 km WNW of Evolène, near Grotte de Glace; N slope with *Larix* wood and calcareous schist. Grid ref. c. 602,8/107,2. Alt. c. 1575 m. 7 August 1990. Observer: MB.
63. 0.5 km WNW of Evolène, shore of Borgne, just N of bridge, large boulders of schist in stream. Grid ref. 603,9/106,9. Alt. 1340 m. 7 August 1990. Observer: MB.

66. S of Evolène, 2.6 km SSW of Les Haudères, narrow valley with large block of gneiss at shore of stream. Grid ref. 604,2/101,3. Alt. 1700 m. 8 August 1990. Observer: MB.
67. S of Evolène, 1.5 km SW of Les Haudères, narrow valley with N-exposed steep shaded rock face of crumbling schist. Grid ref. 604,3/102,4. Alt. 1600 m. 8 August 1990. Observer: MB.
68. c. 1.1 km SE of Evolène, SW slope with calcareous schist in grassland. Grid ref. c. 605,2/106. Alt. 1450 m. 8 August 1990. Observer: MB.

The encountered species are listed in alphabetical order. For each species the numbers of the localities are given, where it has been collected, as indicated above. Indications of habitat, abbreviated as explained below, are often added. The list is composed of contributions by Pieter van den Boom (PB), Maarten Brand (MB), Harrie Sipman (HS), Leo Spier (LS), Han van Dobben (HD) and Pim van der Knaap (PK). The material of the latter two was identified by André Aptroot. Material of all the species is kept in the herbaria of the collectors, except the collections of HD and PK which are kept in the herbarium of André Aptroot.

We are grateful to the following specialists for their help with identification of some specimens: Dr. O. Breuss, Vienna (*Placopyrenium*), Dr. P. Clerc, Geneva (part of the *Usnea* specimens), Dr. P. Diederich, Luxembourg (lichenicolous fungi), Dr. H. Mayrhofer, Graz (*Protothelenella* and *Rinodina*), Dr. W. Obermayer, Graz (*Arthrorhaphis*), Dr. L. Tibell, Uppsala (*Caliciales*).

Substrate abbreviations

Ac = <i>Acer</i>	c = calcareous rock
Acp = <i>Acer pseudoplatanus</i>	s = siliceous rock
Al = <i>Alnus</i>	e = epilithic (unident. rock)
La = <i>Larix</i>	w = wood
Pic = <i>Picea</i>	p = stump
Pin = <i>Pinus</i>	m = moss
Po = <i>Populus</i>	t = terricolous
Rh = <i>Rhododendron</i>	
Sa = <i>Salix</i>	
So = <i>Sorbus</i>	

List of species

- Acarospora badiofusca* (Nyl.) Th. Fr., 13, on exposed vertical surface of gneiss.
- Acarospora bullata* Vain., 57s.
- Acarospora cervina* (Pers.) Massal., 4c 7c 16c.
- Acarospora chlorophana* (Wahlenb.) Massal., 9s, only a small specimen, on overhang.
- Acarospora fuscata* (Nyl.) Arn., 13s 24s 26s.
- Acarospora glaucocarpa* (Ach.) Körber, 22c.
- Acarospora cf. heppii* (Naegeli) Naegeli, 22, on calcareous schist, shaded in a forest, thallus only visible around the apothecia, which are 0.5 mm in diam and epruinose, hymenium ca. 80 µm high, paraphyses 2 µm thick at the base and 3 µm at the apices.
- Acarospora impressula* Th. Fr., 38c.
- Acarospora laqueata* Stiz., 44e.
- Acarospora cf. umbilicata* Bagl., 24s.
- Acarospora veronensis* Massal., 6s 30s 40s.
- Agonimia tristicula* (Nyl.) Zahlbr., 5t 16t, on moss. The latter specimen is accompanied by *Bryonora castanea* and has several perithecia.
- Alectoria nigricans* (Ach.) Nyl., 41.
- Alectoria ochroleuca* (Hoffm.) Massal., 25t.
- Anaptychia ciliata* (L.) Körber, 12Al.
- Anema decipiens* (Massal.) Forss., 54s.
- Anema nummularium* (Duf.) Nyl., 44e.
- Arthonia exilis* (Flörke) Anzl., 65.
- Arthonia intexta* Almq., 46, on *Lecidella carpathica*.
- Arthonia punctiformis* Ach., 53, on twigs of *Acer*.
- Arthonia radiata* (Pers.) Ach., 17So 32 34So.
- Arthonia vinosa* Leighton, 29p.
- Arthopyrenia lapponia* Anzl., 65.

- Arthopyrenia punctiformis* Massal., 29Ac.
Arthroraphis citrinella (Ach.) Poelt, 18t 24m, conf. W. Obermayer.
Aspicilia alphoplaca (Wahlenb. in Ach.) Poelt & Leuckert 13s 30s.
Aspicilia caesiocitrinea (Nyl. ex Malbr.) Arn. s.l., 16s 28s.
Aspicilia calcarea (L.) Mudd, 45c.
Aspicilia candida (Anzi) Hue, 36s.
Aspicilia cinerea (L.) Körber, 13 32s.
Aspicilia contorta (Hoffm.) Krempelh., 23c 26s.
Aspicilia grisea Arnold, 47c.
Aspicilia mastrucata (Wahlenb.) Th. Fr., 57s.
Aspicilia rolleana Hue, 15s.
Aspicilia melanaspis (Ach.) Poelt & Leuckert, 48s 63s.
Aspicilia radiosa (Hoffm.) Poelt & Leuckert, 26c 55e.
Aspicilia supertegens Arn., 24c.
Aspicilia viridescens (Massal.) Krempelh., 33c.
Bacidia arnoldiana Körber, 17So.
Bacidia baglettoana (Massal. & De Not.) Jatta, 4m.
Bacidia beckhausii Körber, 6p 18w 29w.
Bacidia circumspecta (Nyl. ex Vain.) Malme, 19Sa.
Bacidia globulosa (Flörke) Haf. & V. Wirth, 5p 29p.
Bacidia herbarum (Stizenb.) Arn., 22t, on moss.
Bacidia naegelii (Hepp) Zahlbr., 17So.
Bacidia populorum (Massal.) Trevis., 17So.
Baeomyces placophyllus Ach., 23t.
Baeomyces roseus Pers., 33t.

LAUFENDE FORSCHUNGSPROJEKTE IN BRYOLOGIE / LICHENOLOGIE

In dieser Rubrik sollen Arbeiten vorgestellt werden (z. B. Diplomarbeiten, Dissertationen, "Freizeit"-projekte, Projekte der Auftragsforschung usw.), in denen Moose und/oder Flechten schwerpunktmaßig untersucht werden. Wer ein solches Thema bearbeitet oder in einem entsprechenden Projekt tätig ist und an dieser Stelle darüber berichten möchte - evtl. verbunden mit einer Bitte um Literaturhinweise, Angabe von Lokalitäten oder um Zusendung von Untersuchungsmaterial -, sende seinen Text (max. 1 A4-Seite) direkt an den Herausgeber.

Untersuchung der Moosvegetation im Urwaldreservat Bödmerenwald

Das ausgedehnte Karstgebiet südlich des Pragelpasses im Muotatal, Kanton Schwyz, wird in seinem nach Südwesten abfallenden Teil von einem Subalpinen Fichtenwald bedeckt. Das unwegsame, von Karren zerfurchte Gelände erschwerte die forstwirtschaftliche Nutzung erheblich, so dass Teile des Waldes sich heute in einem urwaldähnlichen Zustand befinden. Eine etwa 0.7 Quadratkilometer grosse Fläche davon steht seit einigen Jahren unter Schutz.

Auf Anregung von Dr. Alois Bettschart, Einsiedeln, der die Phanerogamen-vegetation des Gebietes pflanzensoziologisch bearbeitet hat, habe ich im Juli 1991 begonnen, die Moose im Reservat zu untersuchen.

Die durch die Lage am Alpennordrand bedingten reichlichen Niederschläge ermöglichen in der wasserschluckenden Karstlandschaft das Gedeihen üppiger Moosteppe, die als Wasserspeicher und Humusbildner im Ökosystem des Subalpinen Fichtenwaldes eine zentrale Rolle spielen. Das durch Karrenspalten und -schlote, durch Klüfte und Dolinen reich gegliederte Relief enthält eine Vielfalt von Kleinstandorten, die durch ihre unterschiedlichen mikroklimatischen und edaphischen Gegebenheiten einen erstaunlichen Artenreichtum aufweisen. Bis jetzt wurden 235 Moostaxa festgestellt, die in zahlreichen, verschiedenen Artenkonfigurationen jeweils besondere Standorte charakterisieren.

Bemerkenswert ist die Entdeckung einiger überaus reichlicher Vorkommen von *Haplomitrium hookeri*, das in tellergrossen Rassen die seltenen, im Gebiet kleinflächig vorkommenden Flachmoor-Rinnen besiedelt.

Die Auswertung des umfangreichen Materials wird voraussichtlich im Herbst 1993 abgeschlossen sein. Meine Arbeit über die Moosvegetation des Urwaldreservates wird in einem Heft der "Berichte der Schwyzerischen Naturforschenden Gesellschaft" veröffentlicht.
