Antonín V. a Vágner A. (1999): Typový materiál hub v herbáři Moravského zemského muzea v Brně (BRNM) – Czech Mycol. 52: 51–68

V článku je publikován seznam typového materiálu hub v herbáři Moravského zemského muzea v Brně obsahující 351 položek.

The Herbarium of the Department of Botany of the Moravian Museum in Brno, Czech Republic (BRNM) contains about 830 000 specimens; about 80 000 of them are fungi. Concerning micromycetes, the most important collectors were Eduard Baudyš (1886–1968) and Richard Picbauer (1886–1955). Except of own type specimens, a large collection of R. Picbauer contains a number of type specimens by Franz Petrak (not only from his important collection "Flora Bohemiae et Moraviae Exsiccata"). The most important macromycetes collectors were Johann Hruba (1882–1964), Karel Kříž (1907–1980) and František Šmarda (1902–1976). A list of type specimens contains 351 items now.

The lists of type specimens of species described by the most important donators (E. Baudyš, J. Hruba, Jiří Moravec, F. Petrak and R. Picbauer) are also available on an internet web page of the Moravian Museum (www.mzm.cz) in a part with information about Department of Botany.
