Kron	Klingon	Klingon	A Warrior's Death	A colonial Klingon, Kron graduated from the academy and completed a familiarization tour on a battlestation, was assigned to the battlecruiser Thunderchild. After four years (reaching K2 but no higher because of his colonial background) he transferred to PFs where the opportunity for promotion existed. Given the high attrition in PF units, he quickly advanced to command a flotilla and reached rank K3, serving there for a year or more. When his flotilla was wiped out (except for his ship) the entire crew of the G1L was transferred as a replacement draft to the frigate Vandal where Kron spent the rest of his career. This transfer was considered something of an honor. He eventually became a commander K5 and captain of the ship. He would have been transferred to a cruiser command except for his colonial background, which also prevented him from becoming a full captain K6. Kron was the son of the noble family that ruled his colonial planet and the Federation (not knowing that Klingon nobility was non-hereditary) incorrectly addressed him as Lord Kron. The Vandal and Kron disappeared in Y205 and were thought to have been lost in the explosion of supernova G	Y175
