*Technical Reports of the Australian Museum* is a series of occasional papers which publishes bibliographies, catalogues, surveys, and data bases in the fields of anthropology, geology and zoology. The journal is an adjunct to *Records of the Australian Museum* and the *Supplement* series which publish original research in natural history. It is designed for the quick dissemination of information at a moderate cost. The information is relevant to Australia, the South-west Pacific and the Indian Ocean area. Submitted manuscripts are reviewed by external referees. A reasonable number of copies are distributed to scholarly institutions in Australia and around the world.

Submitted manuscripts should be addressed to the Editor, Australian Museum, P.O. Box A285, Sydney South, N.S.W. 2000, Australia. Manuscripts should preferably be on 5½ inch diskettes in DOS format and should include an original and two copies.

*Technical Reports* are not available through subscription. New issues will be announced in the *Records*. Orders should be addressed to the Assistant Editor (Community Relations), Australian Museum, P.O. Box A285, Sydney South, N.S.W. 2000, Australia.

## The Biology and Geology of Tuvalu: an Annotated Bibliography

K.A. RODGERS<sup>1</sup> and CAROL CANTRELL<sup>2</sup>

**ABSTRACT.** Over one thousand references of published monographs, papers, letters, notes and reports concerned with the geology and biology of the nine islands of Tuvalu, the former Ellice Islands, are indexed and annotated. Excluded are meteorological, ethnological, human geographical, historical, administrative and sanitary publications. Medical references are included where these impinge on the zoological or botanical. Fifty papers come from Soviet sources and include results of recent expeditions from that nation in the archipelago.

RODGERS, K.A. & CAROL CANTRELL, 1988. The biology and geology of Tuvalu: an annotated bibliography. Technical Reports of the Australian Museum No.1: 1-103.

### Introduction

The central Pacific nation of Tuvalu (Ellice Islands) consists of nine small islands and atolls scattered along an approximate north-north-west to south-south-east bearing between 5° and 10½°S latitude and 176° and 179½°E longitude. Apart from the similar island chain of Kiribati to the north and east, the nearest land is Rotuma, 400 km to the south-west, with the main islands of Fiji a further 200 km south. The Phoenix and Tokelau groups lie about 700 km east while the Santa Cruz Islands are the first landfall 1500 km west. As a consequence of this isolation, the 36 square km area of the archipelago provides the sole land area due south of the equator and west of the 180° meridian in an expanse of 2,000,000 square km of the central Pacific. From north to south the nine islands are Nanumea, Niutao, Nanumaga, Nui, Vaitupu, Nukufetau, Funafuti, Nukulaelae, Niulakita (Fig.1).

Specimens of the animal and plant life of the islands start to appear in the collections and herbaria of Western Europe from about the mid nineteenth century on. The geology of Funafuti, including its lagoonal sedi-

ments, reefs, submarine topography, stratigraphy and deep structure and composition were described in some detail following three coral reef boring expeditions mounted by the Royal Society in 1896, 1897 and 1898, and a fourth visit by Professor Agassiz of Harvard in 1899. These descriptions, along with reports on collections of the flora and fauna, served to make the natural history of this atoll the best documented of any in the Pacific and Indian Oceans at the turn of the century (Rodgers, 1985).

Little, however, was known of the geology and biology of the other eight islands. Agassiz had made a survey of some of their reefs and collected a few specimens. Other information of scientific value, as well as a few collections which existed in herbaria and museums (e.g. Mueller, 1876; Butler, 1878; Sharpe, 1878) had come largely from missionary sources. Moreover, these collections were not systematic nor comprehensive. Neither were the majority of those from Funafuti. Few had been assembled by a specialist in a particular field while some of the identifications

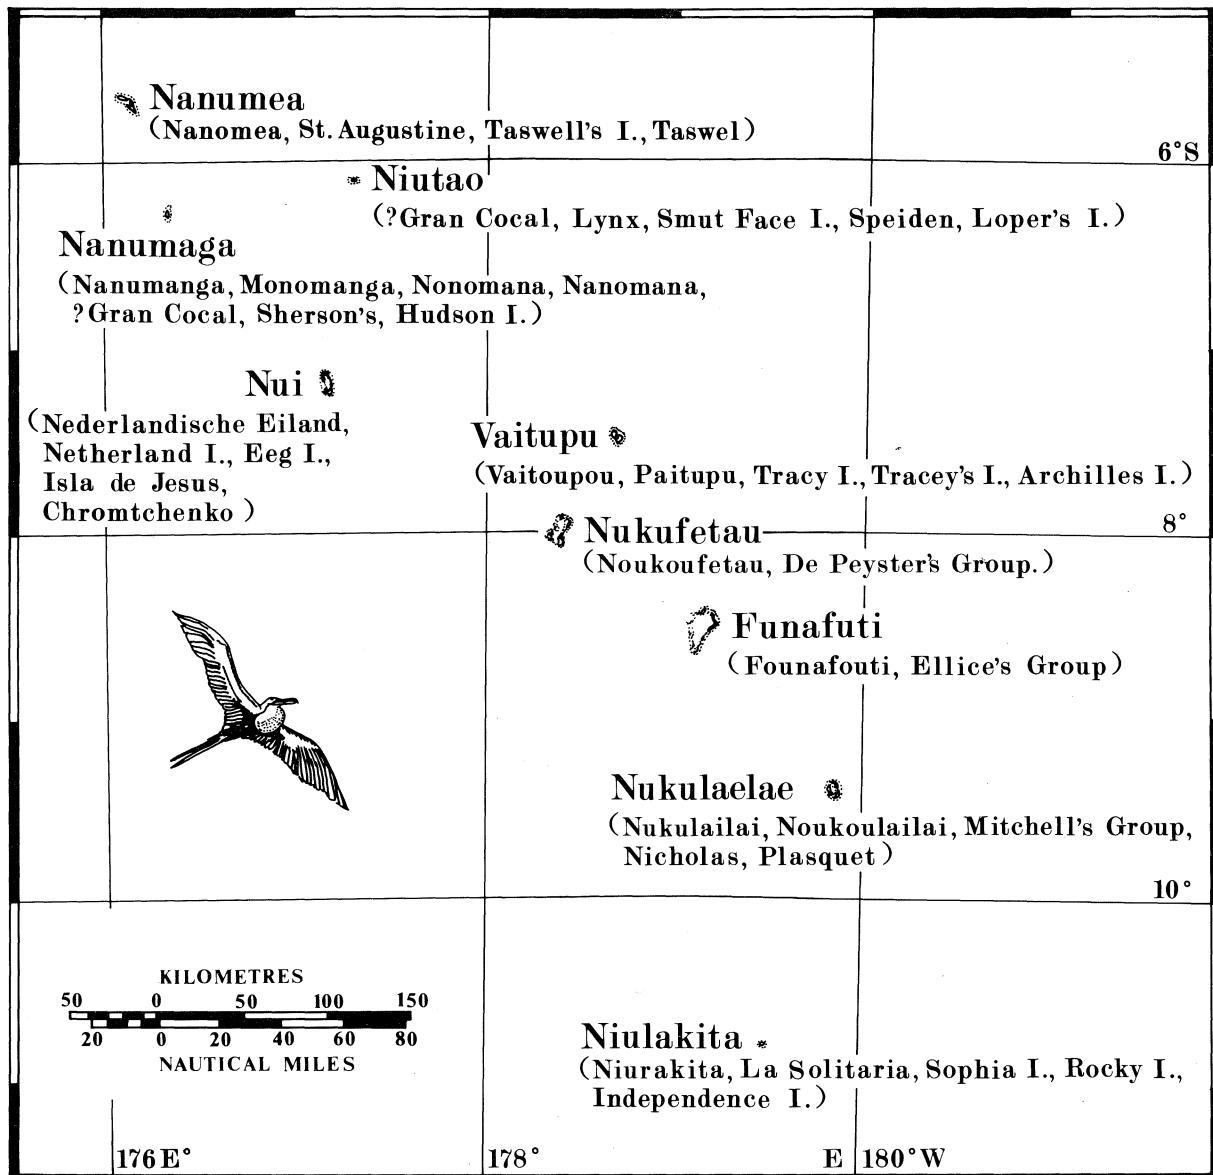

Fig.1. Sketch map of Tuvalu archipelago showing some alternative spellings and names of the islands which occur in the literature.

than a little flawed (e.g. see criticisms of North, 1898; Pocock, 1898; Bogert, 1937; Belkin, 1962; Pont, 1968). Few of these omissions were to be made good in the years succeeding Agassiz' visit. Following the intense activity of the last four years of the nineteenth century, much of the world's scientific community lost interest in this remote and tiny group and little in the way of new field data or specimens became available to build on what had gone before. There were exceptions:

Dr Sixten Bock from Sweden visited in mid 1917. He made small collections of a number of marine invertebrate groups from Nanumaga, Nui, Vaitupu, Nukulaelae, Nukufetau, Niutao and Nanumea, some of which have since been described (e.g. Odhner, 1925; Schellenberg, 1938; Adam, 1945; cf. Rodgers & Oleröd, 1988).

HMS *Challenger* completed a seismic survey of both

Funafuti and Nukufetau in 1951 and established for the first time the thickness of the carbonates through which the Royal Society had hoped to drill at Funafuti as 550-760 m (Gaskell & Swallow, 1952, 1953). A collection of algae made by the *Challenger* from the Funafuti lagoon, was described by Chapman (1955) and sight records by the officers of birds observed in the group were documented by MacDonald & Crawford (1954).

The most diversified expedition to call in the twentieth century was made by the Soviet research vessel *Dmitry Mendeleev* in 1971 and 1973. Geological, oceanographic, biological, meteorological and anthropological field studies were undertaken on various islands over several weeks, as well as in the surrounding waters. Regrettably, while considerable new data were obtained, few publications concerned specifically with Tuvalu/Ellice biology and geology have appeared (e.g.

Vilenkin, 1977; Kolineko & Medvedev, 1980). Most published data have been presented as part of general syntheses of various aspects of natural science in the western Pacific (e.g. Petrov, 1980). The 1973 visit produced one of the first detailed accounts of the consequences of Hurricane Bebe (Askenov, 1975).

The sole area where numerous, continuing, in-depth studies were conducted throughout the entire group was that of filarial infections and their arthropod vectors, the disease being a major threat not only to the communities' health but also the World War II effort. As a result, a wealth of research papers appeared from both British and American workers (e.g. Laird, 1956; Iyengar, 1959, 1960; Zahar *et al.*, 1980).

These contributions apart, the total knowledge of the geology and of the majority of animal and plant groups of the archipelago as at 1970, was essentially that of 1899. This was in sharp contrast to the situation for other, comparable island groups. While topographic maps and charts had improved, the geology of Funafuti and the significance of the Royal Society's corings continued to be debated inconclusively, as the database, with the exception of the *Challenger* results, was still that of the nineteenth century (e.g. Chapman, 1941, 1944 vs Grimsdale, 1952). Although some systematic names of some organisms from the early collections had been reviewed, only a few hundred new specimens had been added to research collections, mainly by Bock and filarial researchers. The mosquitoes were the sole group which might be regarded as being comprehensively documented for all islands. Child's observation that no comprehensive survey of the Gilbert and Ellice Colony had been carried out by a competent ornithologist and, "thus there is a noticeable gap in the available literature of the Pacific birds" (1960, p.1) was valid for many groups of Ellice organisms. Indeed, it still holds for many in Tuvalu today (*cf.* Rodgers & Cantrell, 1986).

When Hurricane Bebe struck Funafuti in October 1971, it served to rudely alert a number of Pacific scientists to the group's existence. Several surveys of both the geomorphological and biological consequences of this major storm have now been reported (e.g. Baines *et al.*, 1974; Askenov, 1975; Baines & McLean, 1976; Mergner, 1983, 1985; Fitchett, 1987).

Fortunately the scientific impetus afforded by Bebe has been immediately followed by that resulting from the onset of independence. For the first time relatively large amounts of money have become available for research and while this has been primarily directed towards planning and economic survival, the natural science content of these areas has begun to be reported in depth. A spate of publications has emanated from organisations such as the South Pacific Commission, Food and Agricultural Organisation, United Nations Development Program and its agencies, as well as

mimeographed reports from various British and Tuvaluan governmental departments. As a result, the pelagic fishes and their baits have joined the mosquitoes as a well studied group (e.g. Klawe, 1978; Crossland, 1979; Zann, 1980; Taumaia & Gentle, 1982; Ellway *et al.*, 1983). For the first time, the botany of one of the islands, Nui, has been documented (Woodroffe, 1985, 1986), while a smaller survey of that of Vaitupu has been informally published (Woodroffe, 1981). Some of the omissions of 1899 are being made good.

However, one consequence of the nature and history of scientific research in Tuvalu is that the literature is widely scattered both historically and geographically. While this is scarcely unique to either Tuvalu or its science, there is nevertheless a seeming predilection on the part of some researchers in the archipelago to rediscover facts and facets of both the geology and biology and to ignore that which has gone before.

Rodgers (1985) drew attention to Chapman's (1955, p.334) statement with which he prefixed his report on the *Challenger*'s 1951 algal collections: "No algal collections appear to have been made on previous visits, not even during the celebrated visit to put a bore down through the reef." Chapman was seemingly unaware of the floral records of Barton (1900, 1901), Foslie (1900a,b, 1901, 1929) and Schmidt (1928).

When Kolineko & Medvedev (1980) published the findings of the Funafuti lagoon corings of the *Dmitry Mendelev* they made no reference to earlier lagoon borings and dredgings of Halligan and Finckh (*in Halligan*, 1904a; David, Halligan and Finckh, 1904). One of the Soviet lines of coring stations in the lagoon approximated closely the dredge line of Halligan and Finckh.

Other examples exist. Few western students of Bebe seem aware of the study of Askenov (1975). Woodroffe (1985, 1986) appeared unacquainted with Mueller's (1876) floral lists. Buckley (1985) reported *Bufo marinus* as accidentally introduced about three years ago but Pacific Islands Monthly (1942), Iremonger (1948) and Laird (1956) have recorded its deliberate earlier introduction. Gibbons & Clunie (1986) would have found the data of Schofield (1976a,b) and the interpretations of McLean (1980) informative in discussing the effect of sea level changes on Tuvalu's pre-history. In particular, the literature concerned with the islands' agriculture and that which documents pests and diseases is rich in rediscovery and scant in acknowledgement of earlier documentation e.g. *cf.* Food and Agricultural Organisation (1961), Lever (1969), Daft (1976), Dharamaraju (1980a,b), Small (1982) and Madison (1983).

No gratuitous criticism is implied by these observations. There are difficulties peculiar to Tuvalu/Ellice literature which are exemplified by the uncharacteristic lapse of Thompson (1983) whose bibliography of the

geology and geophysics of Tuvalu consists of a single page of 23 references.

Whatever the reasons for such oversights, it was to help obviate similar difficulties with ongoing research in Tuvalu that Rodgers (1985) compiled his bibliography. This work drew heavily on some previous compilations (e.g. Krauss, 1969) but remained deficient from several viewpoints. It was biased towards publications arising out of the Royal Society and Agassiz expeditions insofar as it had grown by happenstance (as well as haphazardly) out of a bibliography of the geology of Funafuti. In its turn it overlooked the wealth of information in Sachet & Fosberg (1955, 1971), Bernice P. Bishop Museum (1964) and Mitchell Library (1968). In particular it was restricted in respect of time and money.

However, its publication produced a wealth of material and much needed support from numerous individuals and organisations from throughout the world. This has enabled the present bibliography to be prepared. While no illusory claims for any particular degree of completeness are made, it represents significant progress in Tuvaluan bibliography. It is hoped it will materially assist research in, and an awareness of, these central Pacific islands. Several points should be noted by users.

This bibliography is confined mainly to published monographs, papers, letters and notes which make reference to the geology and biology of the nine islands, the two disciplines being inextricably intertwined at an atoll level. Meteorological references have been documented elsewhere (Rodgers & Cantrell, 1987). Medical, oceanographic and environmental matters are included where these concern the geology or biology. Demographic references have been included only where they refer to climate, agriculture, disease and similar natural science matters. Excluded are references concerned solely with ethnology, human geography, history, administration and general health and sanitation. Unlike Rodgers (1985), works related to European exploration are included where these contain documentation on the location and names which have been used for the various islands. However, separate maps and charts have generally been omitted.

The question of what is and what is not a published document has usually been resolved by the document's availability. Thus all the mimeographed material arising out of the period of colonial rule, from government departments, international organisations, pamphlets of the University of the South Pacific and items of restricted circulation, have been included where they are readily available from research libraries, particularly those in the south Pacific. Conversely, a number of titles which may have proved relevant, have been omitted when they did not prove to be available in Australia, New Zealand, Fiji, Tuvalu or Kiribati.

Much of Tuvalu's literature is in mimeographed or photocopied form. Several libraries and archival repositories were loath to release some items while normal interlibrary loan began to prove prohibitively expensive. This was one reason Rodgers (1985) added annotations to his citations to permit users to assess the relative merits of some of the references. This has been continued in the present compilation.

Some definite but arbitrary guidelines were developed concerning the relevance of a particular reference, the forms of the citation, and the extent and content of the accompanying annotation. Because of the paucity of literature in certain areas, references with even marginal Tuvalu/Ellice content have been included even if the author has done little more than repeat another's earlier record or observation, although in the biology field, a reference is usually cited only where a systematic name is employed unless the content appears to represent a new contribution.

Rodgers (1985) provided some, but not comprehensive, page referencing to systematic names in his annotations of biological items. This has been extended here and some earlier annotations revised as indicated by a double asterisk, \*\*, after the entry. (A single asterisk, \*, after an entry indicates the item appeared in, and the content is little changed from, Rodgers (1985).) While every effort has been made to include all such page references, inevitably a number will have been overlooked. Nor is it to be expected that all users will find the annotations as full as they might wish. However, the authors have tried to take cognisance of the observation of Luomala (1975) that our understanding of the islands' science is hindered by the poor geographic documentation of many research specimens as well as field observations, resulting in unwarranted generalisations being made about the group as a whole (*cf.* Buxton, 1928). Where provenance of specimens or data was indicated in a cited paper it is usually given in the annotation. Three major faunal lists have been deliberately excluded because of their size and ready availability: the foraminiferal records of Chapman (1902a, 1944) and the faunal summary of Hedley *et al.* (1899).

It was originally intended to include only references which had been seen and annotated by the compilers, particularly as several existing bibliographies contain items which appear to have no Tuvalu/Ellice relevance. However, in the long term this was not found to be feasible, particularly with some references provided by the Leningrad Public Library (see Appendix I). In the interest of completeness, some items are included which have not been viewed. These are indicated by ¶ after the entry.

It may be of interest to other Pacific bibliographic workers to note that less than four dozen of the references included here, were available from computer

searches conducted in Australia and New Zealand for Tuvalu/Ellice/botany/zoology/geology/geophysics.

While such searches did produce the odd gem which had not emerged by other means, in geology for example, a far greater number of citations were obtained from conventional indices such as *Zoological Record*, *Bibliography of Geology Exclusive of North America* and its successor *Bibliography of Geology*, as well as from *Science Citation Index*. Shelf searches of journal runs by both content lists and indices proved of value for Tuvalu/Ellice mainly with some specific Food and Agricultural Organisation and South Pacific Commission publications, although among late nineteenth century runs both *Nature* and *Natural Science*, as well as publications of some geographical societies, produced results using "Funafuti" and "Royal Society" as key search words.

A considerable number of titles of both monographs and scientific papers in the present bibliography make no geographic reference to the group. Further, a number of publications possessed titles which suggested they might contain relevant material, but were found to be sadly wanting (e.g. Daft, 1976; Williams, 1980).

The most fruitful source of references proved to be a

working backwards and forwards through the literature following specific themes and authors within those themes. Foslie's many algal publications were obtained by this technique as were those concerned with false scorpions and the mineralogical papers arising from the Royal Society corings. While this approach produced numerous items not occurring in earlier bibliographies, a limitation on the practice was found in the unavailability of complete journal runs, as well as restrictions imposed by time and cost. In the end, many subjective judgments had to be made as to the probable value of following up particular lines. As a result, it is inevitable that items have been missed. In particular, it is suspected that numbers of the biological compendia and catalogues of certain groups of organisms have been overlooked.

"Perhaps, through the relatively intense studies of last century, Tuvalu is uniquely placed for some accurate assessment to be made of the impact of one hundred years of European culture on the ecology of a group of Pacific islands (cf. Wiens, 1962, chap. 19)...[It is hoped] the present bibliography may provide encouragement and a contribution to such an end" (Rodgers, 1985, p.103).

## Acknowledgements

Many scientists, archivists and librarians made contributions to the present study. Especial thanks are owed to Mrs Gwen Baker-Lowry and her staff of the Australian Museum Library, Mrs Kata Ponton and her staff of the National Library and Archives of Tuvalu, Mrs Ester Williams and the staff of the Library of the University of the South Pacific. The Mitchell and State Libraries of New South Wales, the Leningrad Public Library, the Libraries of the Universities of Sydney and Auckland, the Library of the Auckland Museum, the Auckland Public Library, the Australian National Library, the National Library of New Zealand, the Alexander Turnbull Library, the National Archives of Fiji, the South Pacific Commission, Noumea and the S.P.C. Publications Bureau, Sydney, all provided help

and/or reference material. Several individuals made our work a little more complete: Professors Roger McLean and John Morrison, Drs Murray Gregory, Peter Hosking, Olive Johnson, Jim Lowry and Roy Oleröd, Walter Boles, Susan Courtney, Patrick Filmer-Sankey, Thelma Grey, Robert Jones, Rima Katz, Elva Leaming, Anne-Marie McConochie, Paul McIntyre, Sam Rawlins, Kay Stead, Lisa Tagoai, Per Tingbrand, John Cotton Wright, Joan Yee. To any we have overlooked and to dozens of unsung Interlibrary Loan Librarians across the world we say, "Thank you". Funds were provided by the Scientific Distribution Committee of the New Zealand Lottery Board and the University of Auckland Research and Leave Committees.

924. South Pacific Commission, 1980. Joint SPC/NMFS Workshop on marine turtles in the tropical Pacific islands, Noumea, New Caledonia, 11-14 December 1979. South Pacific Commission, Noumea, 16pp. [Green turtle (*Chelonia mydas*) and hawksbill (*Eretmochelys imbricata*) noted from Tuvalu waters. "Numbers are declining and some protection is thought necessary" p.9.]
925. South Pacific Commission, 1981. Expert Committee on ciguatera, Suva, Fiji, 26 February 1981. Report of Meeting. South Pacific Commission, Noumea. 26pp. [Fish poisoning cases in Tuvalu 1977(44), 1978(71), 1979(21) p.3.]
926. South Pacific Commission, 1983. Les activités de la CPS. Lettre d'information sur les pêches, Commission du Pacifique Sud, 27(Octobre-Décembre) 1983: 3. [Report on Tuvalu includes reference to *Revettus pretiosus* caught near Funafuti and *Etelis carbunculus*, *Epinephelus septemfasciatus* caught near Nukulaelae.]
927. South Pacific Commission Environmental Programme, 1981. Country reports 1980-1981. South Pacific Regional Environmental Programme. South Pacific Commission, Noumea. [Includes 13pp governmental report on general environment of Tuvalu.]
928. South Pacific Commission Skipjack Survey and Assessment Programme, 1980a. Review of preliminary results from genetic analysis of skipjack blood samples collected by the skipjack survey and assessment programme. South Pacific Commission Skipjack Survey and Assessment Programme Technical Report 1: 1-22. [3 samples from Tuvalu included in Table 1, p.2 and cf. fig.7, p.20.]
929. South Pacific Commission Skipjack Survey and Assessment Programme, 1980b. Skipjack fishing effort and catch, 1972-1978, by the Japanese pole-and-line fleet within 200 miles of the countries in the area of the South Pacific Commission. South Pacific Commission Skipjack Survey and Assessment Programme Technical Report 2: 1-91. [Data from Tuvalu includes skipjack, albacore, yellowfin, bluefin, bigeye, frigate tuna pp.77-79.]
930. South Pacific Commission Skipjack Survey and Assessment Programme, 1981a. Fishing effort and catch by the longline fleets of Japan (1962-77) and Taiwan (1967-77) within 200 miles of the countries in the area of the South Pacific Commission. South Pacific Commission Skipjack Survey and Assessment Programme Technical Report 3: 1-249. [Data for Tuvalu pp.202-210 includes blue fin, albacore, big eye, yellowfin, broadbill, striped marlin, blue marlin, black marlin, sail fish, skipjack, small tunas.]
931. South Pacific Commission Skipjack Survey and Assessment Programme, 1981b. Report of the second skipjack survey and assessment programme workshop to review results from genetic analysis of skipjack blood samples. South Pacific Commission

- Skipjack Survey and Assessment Programme Technical Report 6: 1-39. [Summary of blood samples, appendix B pp.38-39, includes 3 Tuvaluan data.]
932. Southard, S.L., 1835. [Secretary of the Navy. See Reynolds (1835).]
933. Sparhawk, W.N., 1944. Notes on forests and trees of the central and southwest Pacific area. Forest Service, U.S. Department of Agriculture, Washington, 78pp. Mimeographed. [Ellice Islands' species include *Calophyllum inophyllum*, *Pandanus*, *Hernandia peltata*, *Ochrosia parviflora*, *Hibiscus tiliaceus*, *Ficus* sp., *Thespesia populnea*, *Guettarda speciosa*, *Cordia subcordata*, *Premna taitensis*, *Barringtonia butonica*, *B. speciosa*, *Lumnitzera littorea*, *Tournefortia argentea*, *Morinda citrifolia*, *Artocarpus incisa*, *Rhizophora mucronata*, *Pemphis acidula* with *C. inophyllum* noted as sole indigenous tree of Nukufetau p.17. *Artocarpus* pp.39-40, *Barringtonia* pp.40-41, *Calophyllum* p.46, *Ficus* p.53, *Guettarda* p.55, *Hernandia* p.56, *Hibiscus* pp.56-57, *Lumnitzera* p.59, *Premna* pp.64-65, *Rhizophora* pp.66-67, *Terminalia*, *Thespesia* p.70. References are Hedley (1896) and Maiden (1904).]
934. Spencer, K.A., 1962. Some Agromyzidae (Diptera) from New Guinea, Melanesia and Polynesia. Pacific Insects 4(3): 651-660. [*Ophiomyia cornuta* from Tukugetau(?) = Nukufetau), Ellice Islands.]\*\*
935. Spengel, J.W., 1904. Neue Beiträge zur Kenntniss der Enteropneusten. II. *Ptychodera flava* von Funafuti (Ellice-Gruppe). Zöologische Jahrbuch Abteilung Systematick 20: 1-18, 13 figs. [*P.f. funafutica* is described in detail from specimen collected by Hedley and contrasted with *P.f. caledoniensis* and *P.f. laysanica* (Hill, 1897a,b).]\*\*
936. Stackpole, E.A., 1953. The sea-hunters: the New England whalers during two centuries, 1653-1835. Lippincott, Philadelphia, 510pp. [Describes discoveries of location of Ellice Island atolls pp.280-281, 342-348 but see Chambers and Munro (1980, p.193, footnote 8).]
937. Stanbury, P. & L. Bushell (eds), 1984. South Pacific islands. The Macleay Museum, University of Sydney, vi, 130pp. [Tuvaluan content is minimal, cf. Connell (1984) and Dawbin (1984).]
938. Steenis-Krueman, M.J. van, 1966. Bibliography of Pacific and Malesian plant maps of phanerograms. First supplement. In 'Pacific Plant Areas' (ed C.G.J.J. van Steenis and M.M.J. van Balgooy) 2:312pp. [*Terminalia samoensis* recorded from Ellice Island pp.12, cf. Balgooy (1966).]
939. Steers, J.A., 1932. The unstable earth: some recent views in geomorphology. Methuen, London, 341pp. [In chapter VI, "Coral reefs and coral islands", the Funafuti boring is summarised and commented on in some detail including a commentary on other commentators such as Agassiz, Daly, Skeats, pp.287-291, 309 (footnote). The island and its reefs are described pp.311-316.]

["The reef platforms examined on Funafuti, Nui and Nanumea were impoverished in coral and other invertebrates. On Nanumea all the micro-atolls of *Porites* on the reef top were dead, indicating a recent elevation of the land by about 0.5m." Lists fish preferences, dangerous and venomous fish, fishing techniques, etc. Fish genera and species include: *Ruvettus*, *Pristipomoides*, *Elegatis*, *Lutjanus bohar*, *Acanthocybium*, *Epinephelus* spp.; molluscs: *Spondylus*, *Tridacna*, *Strombus luhanus*, *Donax*, *Atactodea*, *Periglypta*, *Nerita*, *Planaxis*, *Pinctada*, *Cyprea tigris*; crustacea: *Geocarcinus*. Appendix gives comprehensive list of Tuvaluan animals with both systematic and vernacular (English and Tuvaluan) names as follows: fish: *Sphyraena*, *Alopias*, *Galeocarda*, *Carcharhinus*, *Melanopterus*, *C. spp.*, *Tiaenodon*, *Isurus*, *Ginglymostoma*, *Manta*, *Dasyatidas*, *Aetobatus*, *Himantura*, *Dasyatis*, *Albula*, *Chanos chanos*, clupids, *Chirocenturs dorab*, *Saurida*, *Plotosus anguillaris*, *Gymnothorax*, *Echidna nebulosa*, *Exocoetus*, *Fistularia*, *Hemiramphidae*, *Tylosurus*, *Pleuronectiformes*, *Aulostomus*, *Myripristes*, *Holocentrus*, *Adioryx*, *Variola louti*, *Epinephelus hexagonatus*, *E. merra*, *E. melanostigma*, *E. tauvina*, *Plectropomus lanceolatus*, *P. leopardus*, *Cephalopholis urodelus*, *C. argus*, *Grammistes soxlineatus*, *Kuhlia*, *Sphyraena forsteri*, *Makaira*, *Xiphias*, *Istiophorus*, *Promethichthys*, *Neothunnus macropterus*, *Gymnosurda nuda*, *Euthynnus alletteratus*, *Katsuwonus pelamis*, *Acanthocybium*, *Rastrelliger*, *Scomberomorus*, *Trachinotus bailloni*, *Coryphaena hippurus*, *Gnathodon speciosus*, *Carynx ignobilis*, *Carangoides ferdau*, *Caranx elacate*, *C. lugubris*, *C. melampygus*, *C. sexfasciatus*, *Chorinemus tol*, *Decapterus*

*pinnulatus, Elagatis bipinnulatus, Sela crummenophthalmus, Trachinotus bailloni, Chorinemus lysan, Mene maculata, Ruvettus pretiosus, Pricanthus, Kyphosus, Cirrhitidae, Paracirrhites, Onotaxis, Lethrinus leutjanus, L. reticulus, L. nebulosus, L. variegatus, Lethrinella miniata, Gnathodentex pristipomoides, Lutjanus russelli, L. monostigma, L. bohar, L. kasmira, L. fulvus, L. gibbus, L. variegatus, Aprion virescens, Monotaxis, Caesio, Sigania, Atherinidae, Mugil vaigiensis, M. cephalus, Ploynemidae, Mulloidichthys auriflamma, M. samoensis, Parupeneus, Upeneus sulphureus, U. vittatus, Scaridae, Chelinus trilobatus, C. undulatus, Gomphosus, Amphiprion, Pomacentridae, Platax, Forcipiger, Chelmon, Chaetodontidae, Chaetodon auriga, Acanthurus lineatus, A. olivaceus, A. archilles, A. guttatus, A. lencopareius, A. bleeker, Callicanthus lituratus, Zebrasoma, Naso brevirostris, N. unicornis, Ctenochaetus, Balistidae, Melichthys, Pseudobalistes, Balistoides viridescens, Balistapus, Arothron, Ostracion, Diodon, Pterois, reptiles: Chelonia mydas, Eretmochelys imbricata, Laticauda schistorhynchos, seabirds: Anous minutus, A. stolidus, Sterna nereis, Fregata minor, Eretta scara, Mammals: dolphin, whale; seaweed: Turbinaria; mangrove: Rhizophora; plankton: Dinoflagellate or Trichodesium; Porifera; Polychaeta; coelenterates: Physalia, Alcyonaria, Scleractinia, Acropora, Porites, Tubipora, crabs: Uca, Geocaroides, Cyclograpsis, Carpilius, Ocypode, Atergatus, Grapsus, Birgus, Coenobita, spp., Panulirus; other anthropods: Balanomorpha, Lepadines, Errantia, molluscs: Planaxis, Nerita spp. Cypraea moneta, C. annulus, C. arabica, C. tigris, C. caputserpentis, C. mauritania, Ovula ovum, Conus ebraeus, C. textile, Lambis lambis, L. truncata, Strombus luhuanus, Turbo, Charonia, Cassis, Tridacna, Pinna, Donax, Spondylus, Pinctada, Periglypta, echinoderms: Asterioidea, Diadema, Echinometra, Heterocentrotus, Ophiuroidea, Holothuria atra.]*

1077. Zann, L.P., 1982. The energy crisis and the Pacific Island fisheries: Problems in paradise. *Australian Fisheries*, March 1982: 24-29. [Includes map, illustrations of Nanumean canoe builder p.27, bluewater fisherman p.29.]

1078. Zann, L.P., [1983]. Traditional management and conservation of fisheries in Kiribati and Tuvalu atolls. Institute of Marine Resources, University of the South Pacific, Suva, 42pp. [Discusses social factors promoting conservation, traditional fishing knowledge and sea lore, famine foods, status foods, taboos on marine animals, which in Tuvalu include rays, sharks, octopus (for those of Samoan descent),

dolphins.]

1079. Zann, L.P., 1983. Man and atolls: Traditional utilization and conservation of marine resources and recent changes in Tuvalu and Kiribati. Programme Abstracts, Pacific Science Association 19th Congress, Dunedin 2: 262. [Discusses new and intense pressures on fragile atoll ecosystems and reasons for this. A typescript of this paper dated 3 Feb 1983 is held in Library, University South Pacific. It refers to numerous species but gives systematic names and provenance in only a few cases.]
1080. Zann, L.P., [?1984]. Publications and reports on: Artisanal fisheries in the South Pacific, (Reports 1-6). Institute of Marine Resources, University of the South Pacific, Suva. [A compilation of published and unpublished reports referred to elsewhere in this bibliography.]
1081. Zann, L.P. & L. Bolton, [1984]. The distribution, abundance and ecology of the blue coral *Heliopora coerulea* (Pallas) in the Pacific. Institute of Marine Resources, University of the South Pacific, Atoll Research Unit, Tarawa Atoll, Republic of Kiribati, 25pp. [Includes studies in Funafuti, Vaitupu, Nui and Nanumea where the coral is particularly abundant as a component of beach gravel.]
1082. Zann, L.P. & L. Bolton, 1985. The distribution, abundance and ecology of the blue coral *Heliopora coerulea* (Pallas) in the Pacific. *Coral Reefs* 4(2): 125-134. [As above.]
1083. [Zdororemin, V.V. & G.B. Udintsev], 1970. [See Appendix I.]
1084. Zen, E-An., 1960. Carbonate equilibria in the open ocean and their bearing on the interpretation of ancient carbonate rocks. *Geochimica et Cosmochimica Acta* 18: 57-71. [Includes discussion of Cullis' (1904) and Judd's (1904) mineralogy and chemistry in light of modern knowledge and later work of Schmalz (1956) and Goldsmith and Graf (1958).]
1085. [Zenkevich, L.A.], 1969. [See Appendix I.]
1086. [Zenkovich, V.P.], 1967. [See Appendix I.]
1087. Zon, R. & W.N. Sparhawk, 1923. Forest resources of the world. McGraw Hill, New York, 2vols, 997pp. [One sentence devoted to Marshall, Gilbert and Ellice Islands: "Many of the atolls of these groups are densely wooded but the forests

- apparently consist chiefly of palms p.954.]
1088. Zwaluwenburg, R.H. van, 1928a. Coleoptera: Elateridae. In 'Insects of Samoa and other Samoan terrestrial Arthropoda' Part IV (2): 111-124. British Museum (Natural History), London. [*Simodactylus tasmani* from Ellice Group, pp.111, 120.]\*
1089. Zwaluwenberg, R.H. van, 1928b. Check list of the Elateridae of Oceania. Bernice P. Bishop Museum Occasional Paper 9: 1-28. [*Simodactylus tasmani* from Nui, Nukufetau p.10, *Conderus pallipes* (Ellice), *C. umbraculatus* (Funafuti), *C. variabilis* (Funafuti) p.12.]\*\*
1090. Zwaluwenburg, R.H. van, 1949a. *Agonoxena argaula* Meyrick. Proceedings, Hawaiian Entomological Society 13: 334. [Record from Ellice Islands.]
1091. Zwaluwenburg, R.H. van, 1949b. Notes on parasites of *Agonoxena argaula* Meyrick. Proceedings, Hawaiian Entomological Society 13: 447-448. [Record from Ellice Islands noted.]
1092. Zwaluwenburg, R.H. van, 1957. Coleoptera: Elateridae. Insects of Micronesia 16(1): 1-66. [*Simodactylus fasciolatus* from Nui, p.30 ex Buxton and Hopkins. Specimen formerly erroneously identified as *S. tasmani* pp.30, 32 (Zwaluwenburg, 1928). *S. tatsui* from Ellice Islands pp.34-35.]
1093. Zweifel, R.G., 1979. Variation in the scinid lizard *Lipinia noctua* and notes on other Lipinia from the New Guinea region. American Museum Novitates 2676: 1-21. [Indicates occurrence of species in either Funafuti or Nukulaelae on fig. 8.]

## Index

With a few exceptions, only broad headings are provided for the bulk of topics indexed here. About half the annotated references fall into clear-cut specific fields of study. Others are multidisciplinary and have been multi-indexed. However, not all publications are easily categorized and the index must not be regarded as comprehensive. Review-type surveys of Tuvalu frequently make fleeting reference to matters such as the Royal Society boring or the status of agriculture in the group. Not all such references are indexed here. Those given under such headings are either those considered as significant by the compilers or are cited by way of example only. Similarly, not all vernacular references to organisms are necessarily listed. Further, changes in biological nomenclature over the years has made it difficult for some genera to be assigned to their correct modern grouping. Some systematic usages in Schmeltz (1869-1877) proved particularly troublesome in this respect.

It must be re-emphasised that not all Soviet references were available for detailed annotation. As such some two dozen of these have not been indexed other than in the broadest terms. A specific category "Biology, unspecified Soviet studies" has been used for many of these items.

### Amphibians

*Bufo marinus* 110, 353, 473, 582, 844

Annelida (worms) 110, 139, 429, 431, 579, 895, 898, 905, 1039

Arthropoda (see also Insecta) 22, 85, 140, 189, 215, 242, 309, 423, 429, 431, 814, 815, 816, 848, 871, 895, 1044, 1076

Arachnida 815

Scorpiones (scorpions) 120, 559, 792, 815, 855

Araneae (spiders) 55, 56, 502

Pseudoscorpiones (false scorpions) 48, 49, 50, 138, 509, 1052, 1053, 1054

Acari (mites) 484

Crustacea 68, 265, 267, 423, 446, 871, 1033

Ostracoda (ostracods) 147, 148, 149, 448

Cirripedia (barnacles) 85

Malacostraca (higher crustaceans) 68

Stomatopda 81

Decapoda 37, 818, 1066

shrimps 38, 80, 82, 83, 183, 266, 449, 450, 451, 631

coconut crab 45, 212, 263, 265, 359, 423, 1026

crabs 84, 110, 265, 763, 963

Amphipoda 85, 862

Isopoda 85, 754, 879

Myriapoda 24, 792, 815, 894

Astronomy 583

Australian Museum Memoir III (see also Expeditions)

22, 23, 33, 189, 274, 323, 328, 329, 330, 423, 424, 426-428, 431, 444, 445, 578, 764, 792, 814, 815, 896, 1011, 1012, 1033-1039

Aves (birds) 16, 32, 45, 63, 71, 140, 156, 157, 158, 215, 244, 245, 332, 344, 360, 414, 423, 424, 462, 488, 527, 530, 540, 556, 589, 629, 676, 677, 697, 698, 699, 749, 755, 756, 757, 770, 782, 783, 786, 801, 845, 849, 889, 890, 909, 949, 967, 977, 981, 1028, 1031, 1044, 1056, 1064, 1076

Bibliographies 15, 58, 124, 168, 173, 185, 188, 275, 293, 295, 296, 311, 320, 385, 386, 419, 466, 478, 479, 500, 532, 562, 628, 630, 673, 674, 711, 712, 723, 740, 768, 769, 775, 810, 842, 845, 846, 848, 855, 856, 857, 895, 920, 923, 960, 962, 965, 972, 974, 977, 981, 999

Island indices 94, 104, 248, 996

Biology, unspecified Soviet studies 11, 12, 13, 42, 117, 376, 377, 507, 561, 744, 747, 748, 1085

Botany 62, 69, 72, 110, 122, 168, 215, 235, 258, 280, 300, 323, 360, 424, 473, 540-556, 582, 703, 711-715, 731, 751, 775, 856, 857, 903, 960, 979, 983-988, 1013, 1045, 1087

Algae (marine) 39, 40, 62, 110, 152, 169, 229, 246, 250, 290, 314-319, 343, 365, 367, 369, 446, 457, 491, 492, 501, 502, 567, 613, 784, 871, 873, 883-887, 966, 969, 972-974, 1076

Algae (non-marine) 237, 582

coconuts 106, 215, 237, 242, 300, 302, 304, 424, 486, 635-641, 702, 727, 731, 806, 903, 904-907, 984, 1044, 1048, 1070

diseases 237, 292, 295, 296, 304-310, 357, 422, 423, 903, 921, 971, 983, 994, 1044, 1072, 1073

mycology (fungi) 172, 237, 305, 730

taro, pulaka, babai 88, 131, 140, 141, 215, 234, 258, 280, 302, 399, 404, 422, 423, 424, 486, 581, 583, 621, 731, 839, 983-988, 1018, 1031

terrestrial 34, 35, 69, 88, 140, 141, 168, 185, 215, 233, 234, 237, 239, 242, 278, 299, 302, 312, 313, 323, 360, 399, 402, 404, 422, 423, 433, 486, 540-556, 589, 617, 635-641, 710, 739, 789, 839, 903, 933, 938, 941, 945, 946, 983-988, 1018, 1031, 1059-1062, 1074-1076

Brachiopoda (lampshells) 179, 427, 446

Colenterata (see also Coral reefs) 14, 140, 250, 290, 297, 335, 425, 429, 457, 501, 788, 1025

systematics (including Meduseae, Milleporina, hydroids) 8, 87, 110, 290, 334-339, 423, 424, 431, 437-441, 446, 485, 708, 709, 848, 871, 964, 1004, 1005, 1026, 1035, 1036, 1038, 1039, 1076, 1080, 1081

Coral reefs and atolls (see Expeditions, Geography, Geology) 11, 12, 13, 42, 168, 213, 214, 218, 229, 272, 282, 286, 289, 290, 317, 376, 377, 378, 423, 457, 502, 504-505, 566, 567, 568, 570-577, 598, 615, 626, 627, 635-641, 745, 753, 876, 884-887, 916, 917, 922, 969, 990-992, 1025, 1086

debate on origins 4, 5, 7, 9, 18, 23, 89, 132, 133, 174,
