## INTRODUCTION

The Plant Disease Diagnostic Laboratory (Lexington and Princeton) processed 3309 plant samples. Plant samples with more than one problem numbered 429 bringing the total number of actual diagnoses to 3738. The Lexington Laboratory diagnosed 2388 specimens, including 2019 routine plant samples, 356 samples from commercial nurseries surveyed for the Sudden Oak Death (SOD) pathogen, and 13 eastern red cedar (*Juniperus virginiana*) samples from commercial lumber companies for pinewood nematode extraction (PWNE). The Princeton Laboratory diagnosed 1686 specimens, including 872 routine plant samples and 49 Soybean Rust (SBR) sentinel plot samples. In addition, 765 soil samples were submitted to the Princeton Laboratory exclusively for soybean cyst nematode (SCN) analysis. Sample totals are summarized in Figure 1 below.

**Figure 1: Plant Disease Diagnostic Laboratory – 2013**

<b>Total Samples</b>	<b>4074</b>

	<b>4503</b>

## NATURE OF WORK

Plant disease diagnosis is an ongoing educational and research activity of the U.K. Department of Plant Pathology. There are two branches of the Plant Disease Diagnostic Laboratory (PDDL), one on the U.K. campus in Lexington, and one at the U.K. Research and Education Center in Princeton.

Diagnosis of plant diseases requires keen observation and investigation into the possible causes of plant problems. Most visual diagnoses involve microscopy to determine which plant parts are affected and to identify the pathogen(s) involved. In addition, many specimens require special tests such as moist chamber incubation, pathogen isolation from plant tissue, enzyme-linked immunosorbent assay (ELISA), nematode extraction, or soil pH and soluble salts tests. The laboratory uses the polymerase-chain-reaction (PCR) technique for identification of certain pathogens.

A database of laboratory records is maintained to provide information used for conducting plant disease surveys, identifying new disease outbreaks, and formulating educational programs. In addition, information from the laboratory provides the basis for timely news of plant disease problems through the Kentucky Pest News newsletter, radio and television tapes, and plant health care workshops. Both laboratories meet Homeland Security regulations for reporting all diagnoses of plant diseases to USDA-APHIS on a real-time basis. A web-based UK Digital Consulting System (DCS) is also available to assist County Extension Agents and Specialists with plant disease issues. Via the DCS, Extension Agents submit images and request advice about plant problems, including how and where best to collect physical samples for submission to the PDDL.

## WEATHER SUMMARY

Temperatures in the first half of the year tended to be normal or slightly above normal, while temperatures in mid-summer were below normal. Average rainfall was consistently higher than normal in much of the state during most months of the year. Wet conditions enhanced early development of foliar diseases, and continued soil saturation promoted root and crown diseases later in the season. Detailed Kentucky weather information is available from the UK AgWeather Center at <http://wwwagwx.ca.uky.edu>.

## ACKNOWLEDGMENTS

**The contributions of the following are gratefully acknowledged:**

Sara Long, Ed Dixon, Bernadette Amsden, Terry Yielding (Technical support);

Renee Laurent (Student worker - Princeton);

Elizabeth Shelby, Cheryl Kaiser, Mary Ann Kelley, Stephanie Farmer (Administrative support);

UK Extension Specialists and Researchers (Sample diagnosis/consultation – see Table 9);

Kentucky Integrated Pest Management Program; Southern Plant Diagnostic Network (Supplemental funding).

## EXPLANATORY REMARKS

In the main body of this report, three columns of numbers appear following the diagnosis and causal agent sections. The first column indicates the number of primary diagnoses, the second column contains the number of secondary diagnoses and the third column is the total of columns 1 and 2. The primary diagnosis is the main, or frequently, the only problem observed on a plant sample. If a second problem of equal or lesser importance was observed, it was entered as the secondary diagnosis. Occasionally, a problem may have only been diagnosed as a secondary problem, and not as a primary problem, thus a zero (0) will appear in the primary diagnosis column.

Referrals and consultations: Insect problems were generally identified or verified by a specialist in the Entomology Department. Chemical injuries on all commercially grown crops were diagnosed by a weed control specialist or crop specialist. Specialists in other departments at UK also may have provided input on diagnoses of abiotic problems.

**Table 1.**  
**SUMMARY OF DIAGNOSES<sup>1</sup> BY CROP CATEGORY AND CAUSAL AGENT TYPE**

Crop Category	Abiotic Problems	Biotic <sup>2</sup> Problems	Chemical Injury	Inadequate Specimen	Insect Injury	Other <sup>3</sup>	Total Diagnoses
<b>Agronomic</b>							
Corn	36	27	12	1	3	11	90
Forages	3	47	1	0	6	2	59

<b>Vegetables</b>	84	332	56	29	55	72	628
<b>Miscellaneous</b>	1	3	0	2	0	2	8
<b>Total</b>	622	2290	177	69	368	977	4503

<sup>1</sup> All counts and totals include primary diagnoses plus secondary diagnoses.

<sup>2</sup> Refer to Table 2 for a further breakdown of this category.

<sup>3</sup> "Other" includes the causal agent categories: No disease and Unknown.

<sup>a</sup> Numbers include 2 soybean samples with and 47 soybean samples without Asian Soybean Rust from the SBR sentinel plot system; and 643 soil samples with and 122 soil samples without Soybean Cyst Nematodes.

<sup>b</sup> Numbers include 356 SOD samples with 59 problems caused by fungi and 297 with no diseases, and 13 juniper samples without pinewood nematode.

**Table 2.****SUMMARY OF BIOTIC PROBLEMS<sup>1</sup> BY CROP CATEGORY**

Crop Category	Bacterial	Fungal	Nematode	Virus	Other <sup>2</sup>
<b>Agronomic</b>					
Corn	1	25	0	1	0

<b>Miscellaneous</b>					
	0	3	0	0	0
<b>Total</b>	<b>143</b>	<b>1340</b>	<b>651</b>	<b>116</b>	<b>40</b>

<sup>1</sup> All counts and totals include primary diagnoses plus secondary diagnoses.

<sup>2</sup> Other includes these categories: Animal (rodent and bird damage), Plant (plant identifications or parasitic plant) and Algae, Lichen and Phytoplasma.

<sup>a</sup> Number includes 2 soybean leaf samples with Asian soybean rust.

<sup>b</sup> Number includes 643 soil samples with Soybean Cyst Nematodes (SCN).

<sup>c</sup> Number includes 59 Sudden Oak Death (SOD) samples with problems caused by fungi.

**Table 3.**

## NUMBER OF PLANT SAMPLES BY CROP CATEGORY

Crop Category	Number of Plant Specimens	Percentage of Total Plant Specimens
<b>Agronomic (-Tobacco + 49 SBRs)</b>	<b>323</b>	<b>9.76</b>
Tobacco	312	9.43
Fruit	397	12.00
Herbs	8	0.24
Identifications	44	1.33
<b>Ornamentals (+ 356 SODs, +13 PWNEs)</b>	<b>1676</b>	<b>50.65</b>
Vegetables	541	16.35
Miscellaneous	8	0.24
<b>Total Plant Samples (w/ SBRs, SCRs, &amp; SODs)</b>	<b>3309</b>	<b>100</b>

**Table 4.**

## SUMMARY OF DIAGNOSES BY CROP CATEGORY AND CROP

Crop Category and Crop	Number of Primary Diagnoses <sup>1</sup>	Number of Secondary Diagnoses <sup>2</sup>	Total Diagnoses <sup>3</sup>
<b>Agronomic</b>			
Corn	71	19	90
Forages	46	13	59
Small grains	49	7	57
Soybeans	922 <sup>a</sup>	23	945
Tobacco	312	67	379
<b>Fruit</b>			
Small fruit	221	28	249
Tree fruit	176	31	208
<b>Herbs</b>			
	8	1	9
<b>Identifications</b>			
	44	na	45
<b>Ornamentals</b>			
Herbaceous and			
Houseplants	176	21	199
Turfgrass	104	21	124
Woody	1396 <sup>b</sup>	111	1504
<b>Vegetables</b>			
	541	87	627
<b>Miscellaneous</b>			
	8	0	8
<b>Total</b>	<b>4074</b>	<b>429</b>	<b>4503</b>

<sup>1</sup> The number of primary diagnoses corresponds to the number of different specimens examined.

<sup>2</sup> If a second problem was evident on the plant specimen it was considered the secondary diagnosis.  
See "Explanatory Remarks."

<sup>3</sup> Total diagnoses equals the number of primary plus the number of secondary diagnoses.

<sup>a</sup> Soybean plant samples + 765 SCN soil samples + 49 SBR soybean samples

<sup>b</sup> Numbers include + 356 SOD samples, + 13 PWNE samples

**Table 5.**

<b>Total/Grower Type</b>	<b>1381</b>		<b>1378</b>			<b>50</b>		<b>82</b>
<b>Total number of routine samples received = 2891</b>								

<sup>1</sup> Ext = Extension samples submitted via County Extension Agents or Extension Specialists.

<sup>2</sup> NE = Non-extension samples submitted directly by the grower or other non-extension clients.

**Table 6.**

**NUMBER OF ROUTINE SAMPLES REFERRED TO OTHER DEPARTMENTS,  
UK LABORATORY FACILITIES OR OUTSIDE AGENCIES FOR DIAGNOSIS\***

Department, Facility or outside agency	Crop Category					Total
	Agronomic	Fruit	Ornamental	Vegetable	Other	
Agdia, Inc.	13	2	3	5	0	23
Entomology Department	1	2	24	3	0	40
Horticulture Department	0	1	0	1	0	2
Plant & Soil Sciences Department	42	0	3	4	1	50
					<u>Total</u>	115
					<u>Total number of routine plant specimens</u>	2891
					<u>Percent of specimens referred outside Diagnostic Lab for diagnosis</u>	4.0

\* Numbers do not reflect the total number of diagnoses and/or consultations conducted by other departments (See Table 9).

**Table 7.**

**SPECIAL LABORATORY TESTS PERFORMED  
BY PLANT DISEASE DIAGNOSTIC LABORATORY\***

<b>Test</b>	<b>Number of Tests</b>
<b>Polymerase Chain Reaction (PCR)</b>	<b>9</b>
<b>Bioassay</b>	<b>3</b>
<b>Culturing</b>	<b>16</b>
<b>Enzyme-linked Immunosorbent Assay (ELISA)</b> (223 routine plant samples, +356 SOD)	<b>579</b>
<b>Microscope</b> (1647 routine plant samples + 49 SBR)	<b>1696</b>
<b>Nematode extraction</b>	
<b>Pinewood nematode (PWN)</b>	<b>13</b>
<b>Soybean cyst nematode (SCN)</b>	<b>765</b>
<b>Soil tests</b>	<b>41</b>
<b>Visual</b>	<b>952</b>
<b>Total</b>	<b>4074</b>

\* Based on 2891 routine plant samples, 49 SBR, 765 SCN, 13 PWNE and 356 SOD samples = 4074

Note: Some samples may have required more than one test but only the definitive test was recorded.

#### TOTALS

<sup>1</sup> Does include SBR (58) survey samples but not SCN (mixed specialist research and county samples), SOD samples (collected by nursery inspectors), or PWNE samples (collected by nursery inspectors).

<sup>2</sup> Agronomic crops include corn, soybeans, forages, and small grains but in this particular case, it excludes tobacco.
