EXPORT
COMMODITY CLASSIFICATION
VOLUME II - NUMERIC INDEX

In Effect January 1, 1984

Reference Manual

INTRODUCTION

Volume II of the **Export Commodity Classification** lists in class order the descriptions of all export commodity classes. In addition, it includes commodity descriptions which are not specifically mentioned in the commodity classes but are frequently encountered on customs export documents. It therefore provides a useful guide to the probable main components of any export commodity class.

This volume makes no attempt to provide a complete list of the contents of each commodity class. It is not designed to help users find the class in which particular commodities are included; that purpose is better served by **Volume III** of the **Export Commodity Classification** which presents the same material arranged in alphabetic order.

Due to space limitations, there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations.

This volume is divided into two sections. The first section or "preamble" is brief (2 pages) and contains a few items which provide:

- (a) general guides to the classification of broad categories of goods
(e.g.: MANGANESE COPPER IS A COPPER ALLOY.)
- (b) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity
(e.g.: AMBERLITE IS A GENERAL TRADE NAME..)

The items in the preamble do not show a class code; they are therefore arranged in alphabetic order.

The balance of this volume presents the export class descriptions and specific commodity rulings arranged in class (numeric) order, and by alphabetic order within each class. The first item shown for any class is the class description, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. **Class descriptions:** these consist of one descriptive line, a unit of quantity (or a blank if the class does not record quantity), a class code and are further identified by the symbol < preceding the description. In many cases class descriptions are sufficiently specific to make rulings on these classes unnecessary.
2. **Specific commodity rulings:** these consist of a description, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. The specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This may occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded **without** quantities.

Some class descriptions are preceded by the symbol # instead of < . Statistics on commodities so identified are not available except to employees of Statistics Canada. In all available published records such classes are combined with the most appropriate general class within the same commodity group (e.g.: class 400-25 with 400-99, class 411-34 with 411-99, etc.).

This volume makes extensive use of abbreviations because of the need to limit most descriptions. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings.

The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

ACC)		GR grade
ACCORD) according		green
BL bleached	INDUS)	
		INDUST) industrial
BRD broad	KD knocked down
COMM commercial	MACH)	
		MCH) machines
DERIV derivatives	MACHY)	
		MCHY) machinery
ELEC electric electrical	MAT materials
EXC except	PDR powder powdered
FAB fabrics	PT)	
		PTS) parts
FIB fibre	WOV woven broad woven
FROZ)			
FZ) frozen		

Units of Quantity: In preparing the export commodity classification, a systematic effort was made to select units of quantity which could readily be reported and which could be made uniform in export and import statistics. As far as possible, uniform units of quantity are used in each group of the classification to facilitate tabulation. Weight and number are the most commonly used units since one or both of these is normally available for any export shipment, but in some cases, measures of volume, area or length are used to conform with prevailing industrial practice. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation.

Throughout the export commodity classification, the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all food preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers, since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

Units of Quantity and Definitions Used in Canadian Export Statistics

- Bbl.** Volume in barrels (for petroleum: 35 Canadian gallons or 42 U.S. gallons).
- Broad woven** ... More than 12 inches in width.
- Canned** Preserved solely by being shut off from air (see also discussion on p. 3)
- Carat** Weight in carats.
- Cord** Volume in cords.
- Cwt.** Weight in hundredweights of 100 lb. each.
- Cwt. N.** For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded (see also discussion on p. 3).
- Domestic exports** All exports wholly produced in Canada, and also all exports of previously imported goods which have been changed in form by further processing in Canada.
- Doz.** Number of dozens.
- Doz. Pr.)**
Dz. Pr.) Number of pairs in dozens.
- Ft.** Length in linear feet.
- Gal.** Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
- Hardwood** Wood from broad-leaved trees.
- Lb.** Weight in pounds.
- Lb. N.** For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded (see also discussion on p. 3).
- M.** Number in thousands.

- M. B. Ft.)
M. B. F.) Volume in thousand board feet.
- M. Cu. Ft.)
M. C. F.) Volume in thousand cubic feet.
- M. Kw. H.)
M. KWH.) Thousand kilowatt hours.
- Narrow woven Not more than 12 inches in width.
- N.E.S. Not elsewhere specified.
- No. Number.
- Pair Number of pairs.
- P. Gal. Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.)
- Re-exports All exports of previously imported goods which are exported in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
- Rf. Sq. Area in roof squares.
- Softwood Wood from coniferous trees.
- Sq. Ft. Area in square feet.
- Sq. Ft.
1/4" equiv.) Volume in square feet of 1/4" thickness, other thicknesses to be converted to the equivalent of 1/4" thickness.
SF1/4) e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of 1/4" equivalent.
- Sq. Ft.
3/8" equiv.) Volume in square feet of 3/8" thickness, other thicknesses to be converted to the equivalent of 3/8" thickness (e.g. 10,000 sq.ft. of 3/16" plywood = 5,000 sq.ft. of 3/8" equivalent).
SF3/8)
- Sq. Ft.
5/8" equiv.) Volume in square feet of 5/8" thickness, other thicknesses to be converted to the equivalent of 5/8" thickness (e.g. 10,000 sq.ft. of 1/4" particle board = 4,000 sq.ft. of 5/8" equivalent).
SF5/8)
- Ton Weight in short tons of 2,000 lb. each:
1 long ton = 1.12 short tons or 2,240 lb.
1 metric ton = 1.1 short tons or 2,205 lb.
- Tr. Oz. Weight in troy ounces.
- In Unit of Quantity column: no quantity recorded.

- * Preceding class code: class or note revised as of date appearing at top of page.
After former code: only part of former class included with present class.
- # Statistics on this class not available except to employees of Statistics Canada.
