BUILT FOR AUSTRALIA IN AUSTRALIA... THAT'S THE CENTURY DIFFERENCE

Batteries that last and last

Built for Australia... In Australia

That's the Century Difference

Since 1928, we've been designing and building our iconic blue and yellow batteries right here in Australia. They are built from the ground up to better suit Australia's extreme climate and harsh conditions. Because we know the road ahead isn't always going to be easy.

Through thick and thin, we've invested heavily in our Australian manufacturing facility to support the local economy and Aussie jobs. Because we believe the best things are made right here.

Australia's oldest and most recognised battery manufacturer

...

Since 1928, Century Batteries has been designing and manufacturing our iconic blue and yellow batteries right here in Australia. Over the years, we have developed the manufacturing expertise and technical know-how to develop a range of batteries perfectly suited to our unique country.

We build them from the ground up to be better suited to Australia's extreme climate and harsh conditions. Because we know the road ahead isn't always going to be easy.

A True Global Leader

Since its foundation in 1895, GS Yuasa has continually worked to create advanced stored energy solutions under the corporate vision of "innovation and growth". It is this philosophy that has seen GS Yuasa establish itself as the world's leading manufacturer of automotive and motorcycle batteries.

Our parent company GS Yuasa is one of the world's largest battery manufacturers and a global leader in quality and innovation.

Proven Performance

GS Yuasa are original equipment (OE) suppliers to the world's leading vehicle manufacturers.

As an affiliate of the GS Yuasa Corporation, Century has access to some of the most advanced technical and R&D resources available in the battery industry. This gives you the assurance that every battery in the Century range has been developed using state-of-the-art manufacturing processes and technical expertise.

The Century Batteries Difference

...

Our range of sealed maintenance free batteries are the result of over 90 years of Australian innovation and refinement. We're rather proud of them, because they're the best batteries we've ever built.

1 ROTARY PLATE

- Specialist advanced plate design provides longer service life and resistance to corrosion and material shedding.
- Lower internal resistance promoting higher CCA and improved vibration resistance.

2 ENHANCED PLATE PASTE

- Reduces water loss and improves charge acceptance for superior performance and cycle life.

3 SEPARATORS

- High Porosity Polyethylene Envelope (PE) separator improves puncture resistance and durability.
- Improves electrolyte dispersion for enhanced performance and power.

4 FLAME ARRESTOR

- The integrated flame arrestor in the central venting system protects the battery from explosion due to external ignition sources.

5 MUD RACK

- Improves plate support, vibration resistance and isolates paste deposits to prevent short circuits.

6 POLYPROPYLENE CASE

- Reinforced design provides durability to withstand shock and vibration.

7 CARRY HANDLE

- Ergonomic design provides a thicker grooved carry handle to improve comfort.

- Utilises fully constrained safety design with pivot pin moulded directly into the case.

8 STATE OF CHARGE INDICATOR

- For on the spot diagnosis of battery condition.

9 CAST ON STRAP

- Thicker cast on strap ensures durability and lower electrical resistance to promote longer life.

10 LABYRINTH LID TECHNOLOGY

- Provides spill proof protection up to 90°.
- Reduced water loss.

Why you can rely on Century Batteries as your complete power solutions provider.

...

Australian Made since 1928

Century Batteries is Australia's oldest and most recognised battery manufacturer. Each battery has been especially designed to satisfy the extreme demands of Australia's harsh climate and operating conditions.

Innovation and Technology

We invest significantly in research, development and our manufacturing facility to ensure we continue to meet the needs of the market place and the next generation of vehicles.

Extensive Product Range

The Century product range includes a comprehensive selection of technologically advanced products including starting, deep cycle, dual purpose and heavy duty batteries for use in a diverse range of applications.

Nationwide Warranty

Each Century battery is backed by a fully comprehensive warranty. This provides peace of mind that your battery is covered against faulty materials or workmanship.

Largest Battery Distribution Network

Our network of regional agents, metro distribution centres and state offices are strategically located across Australia ensuring access to locally held products and battery experts.

Nationwide Recycling Program

Century Batteries is proud to be part of the Century Yuasa Battery Recycling Program which boasts over 1100 registered Battery Recycling Centres around Australia.

Key Partnerships

A majority of leading Original Equipment Manufacturers (OEM) and Australia's biggest retail brands trust Century Batteries for their energy solutions. We continually work with our partners to deliver design, technology and quality in manufacturing.

Our Network

Our network of regional agents, metro distribution centres and state offices are strategically located across Australia ensuring access to locally held products and battery experts.

Battery Ratings

...

Batteries are rated according to a range of specifications and standards. Understanding these ratings and their relevance to the battery's application and operating conditions is key to selecting the right battery.

CCA

(Cold Cranking Amperes)

This is a measurement of the current a fully charged battery can deliver for 30 seconds, whilst also maintaining a voltage of 7.2volts. This test is performed at a temperature of -18°C, and is used to determine a battery's ability to start the engine and maintain sufficient voltage to power the ignition requirements under severe cold starting conditions.

MCA

Marine Cranking Amperes

Similar to CCA, MCA is used to measure the current a marine battery can deliver for 30 seconds at a specific temperature.

MCA tests are conducted at 0°C (instead of -18°C) and the results are often 20 – 25% higher than the equivalent CCA rating. Because of this, it is important to always compare like for like, and never compare CCA to MCA, or vice-versa.

AH

Ampere-Hour @ 20hr

Ah refers to the battery's storage capacity, and is the current a fully charged battery will deliver over a 20 hour period - before the voltage falls to 10.50 volts. An Ah test is always performed at 25°C.

Ignition, Lights, Radio Air, Conditioning, Electric Windows

RC

Reserve Capacity

An RC rating refers to the length of time (in minutes) that a battery can deliver a current of 25 amps until the voltage drops below 10.50 volts. This test is performed at 25°C, and represents a typical electrical load on a car under normal running conditions. Therefore, an RC rating is a good indication of how many minutes a vehicle will run for in the event of a charging system or alternator failure.

How Important Is CCA?

...

For many years, CCA (or Cold Cranking Amperes) has been widely used as a benchmark to measure and compare lead-acid batteries – with the assumption being the higher the CCA, the better the battery. As a result, some manufacturers produce batteries with excessively high CCA ratings to take advantage of this misconception. But there's no such thing as a free lunch, and it's the same story with batteries.

Lead acid batteries contain lead plates, wrapped in separators to insulate and prevent them from touching each other directly and creating a short circuit. A battery can be made to achieve a higher CCA rating by simply adding more of these plates to the battery internals. But in order to achieve this, both the lead plates and the separator material needs to be thinner – and this can have an impact on the strength and durability of these components.

In colder climates, adding more plates and increasing the battery's CCA rating may be desirable. However, in hotter climates like what we experience here

in Australia, having thicker lead plates to combat corrosion and more robust separators are equally important as cranking capacity.

At Century, we believe that it is far more important to strike a balance between CCA and providing a long service life. Our batteries feature expertly designed internal components and an extremely durable construction to combat the causes of battery failure and deliver what Australian motorists really want – longer life and superior performance.

So don't be misled by high CCA ratings – they aren't always better.

ISS Active

ISS Active AGM

A range of premium batteries incorporating Absorbed Glass Mat (AGM) technology to deliver exceptional starting power, extreme cycle life and superior micro-cycling capabilities. ISS Active AGM batteries are designed and engineered specifically for vehicles fitted with advanced Stop Start engine management, regenerative braking and energy recovery systems.

- ✓ Perfect for replacing original equipment (OE) batteries
- ✓ Superior charge acceptance for faster recharge between repeated engine starts
- ✓ 3 x higher cycling endurance
- ✓ Low self-discharge rate for longer shelf life

Idle Stop Start Systems vs Conventional Batteries

In vehicles fitted with Idle Stop Start systems, the battery must be able to handle the rigours associated with constant Idle Stop Start demands, rapid recharging and the power requirements needed to run electrical accessories whilst the engine is switched off.

The battery must also deliver the necessary cranking capacity to start the vehicle in a fraction of a second when the brake is released or the accelerator depressed.

ISS Active EFB

A range of original equipment (OE) grade Enhanced Flooded Batteries (EFB) which are used and endorsed by some of the world's leading car brands. The ISS Active EFB range is designed to help reduce fuel consumption and CO² emissions in vehicles fitted with standard Idle Stop Start systems. It is also a highly recommended upgrade for non-stop start vehicles which make regular short journeys, where a battery with superior recharge efficiency and micro cycling capabilities will be better utilised.

- ✓ Perfect for replacing original equipment (OE) batteries
- ✓ Lithium carbon additive for up to 50% faster recharging and 2x higher cycling performance
- ✓ Thicker and stronger internal components for increased shock and vibration resistance
- ✓ Recommended upgrade for standard vehicles subjected to repeated short journeys

† Conditions apply. Refer to individual warranty statements attached to each battery.

S

Conventional batteries are not designed to handle the cycling requirements of Idle Stop Start systems. In a conventional system the battery operates in a high state of charge and starts the vehicle two or three times per day.

The capacity used to start the engine is replaced by the alternator throughout the duration of the journey. The battery is not subjected to constant cycling or required to operate in a partial state of charge.

Using a conventional battery in an Idle Stop Start system can effect the ISS and CO₂ emission controls in the vehicle and lead to premature battery failure.

ISS Active

ISS Active EFB Maintenance Free

A range of Enhanced Flooded Batteries (EFB) designed to aid the reduction of CO² emissions and fuel consumption in vehicles fitted with standard Idle Stop Start systems. It is also the suitable upgrade for standard vehicles that make regular short journeys because of its superior recharge efficiency and micro cycling capability.

- ✓ Superior starting power to handle repeated engine restarts
- ✓ Improved recharge efficiency and reliable cycling performance
- ✓ Sealed maintenance free design
- ✓ Suitable upgrade for standard vehicles subjected to repeated short journeys

Hybrid Vehicles

Hybrid Auxiliary

A range of original equipment (OE) Hybrid Auxiliary batteries endorsed by some of the world's leading car brands. Century Hybrid Auxiliary batteries provide superior cycling performance and dependable auxiliary power for hybrid vehicles. They're designed to meet and exceed the unique requirements of vehicles with auxiliary battery systems.

- ✓ Direct OE replacement - perfect for replacing your vehicle's original equipment battery*
- ✓ Optimum charge acceptance for fast recharging between repeated engine starts
- ✓ AGM technology for superior cycling endurance and longer service life
- ✓ Spill-proof construction for maximum safety

Car & Passenger Vehicles

Ultra Hi Performance

Century Ultra Hi Performance batteries are designed and built in Australia[^] to suit our local conditions, providing the ultimate in battery performance which Australians have relied on for generations. Suitable for both old and new vehicles with higher power demands, Century Ultra Hi Performance batteries are engineered to exceed leading vehicle manufacturer's standards for quality and performance, delivering exceptional starting power, maximum service life and extra power for vehicle electrics.

- ✓ Suitable for both old and new vehicles with high power demands
- ✓ Over 20% extra starting power and 30% longer life*
- ✓ Designed and built tough in Australia[^] to suit our local conditions
- ✓ Maximum service life with a sealed maintenance free design for reduced water loss

Car & Passenger Vehicles

Hi Performance DIN

Century Hi Performance DIN batteries have been designed and manufactured to deliver longer life and performance while meeting the fitment requirements of European and Imported vehicles. Suitable for both old and new vehicles with standard power demands, Century Hi Performance DIN batteries are engineered to meet leading vehicle manufacturer's standards for quality and performance, delivering superior starting power, longer service life and power to run vehicle electrics.

- ✓ Suitable replacement for original equipment (OE) batteries
- ✓ Superior starting power
- ✓ Suitable for both old and new vehicles with standard power demands
- ✓ Designed and built tough in Australia to suit our local conditions[^]

4x4 & SUV

Overlander 4x4

Century Overlander 4x4 batteries are designed to handle it all – from touring 4x4's which stay on sealed roads, all the way through to purpose-built weekend off-road warriors. Designed and built in Australia to withstand the punishment of our extreme climate and harsh off-road conditions, Century's Overlander 4x4 is a dual-purpose battery – providing superior starting power and semi-cycling capabilities to power aftermarket vehicle accessories.

- ✓ Superior starting power for heavy duty off-road 4x4's & SUV's
- ✓ Dual Purpose – starting and semi-cycling capabilities for 4WD accessories*
- ✓ Thicker full frame cast plates for extra strength, endurance and durability in 4x4 conditions
- ✓ Platelock™ technology and glass mat separators for enhanced vibration and impact resistance

4x4 & SUV

Ultra Hi Performance

Engineered for soft off-road and on-road 4x4's and SUV's, Century Ultra Hi Performance 4x4 batteries provide exceptional starting power and maximum service life. Designed and built in Australia using hard-wearing components, Century Ultra Hi performance batteries are equipped to withstand the punishment of our unique climate and off-road conditions.

- ✓ Exceptional starting power for soft off-road and on-road 4x4's and SUV's
- ✓ Improved internal plate design for extra strength, endurance and durability
- ✓ Platelock™ technology reduces movement of internal plates for vibration resistance.
- ✓ Sealed maintenance-free design for reduced water loss and up to 50% more* service life

Truck & Bus

Ultra Hi Performance

Century Ultra Hi Performance truck batteries are the clear choice for professional drivers, providing advanced technology for long haul on-highway trucks with higher power demands. Designed and built in Australia to withstand the punishment of our extreme climate and harsh conditions, Century Ultra Hi Performance truck batteries provide exceptional starting power and semi-cycling capabilities to power on-board accessories.

- ✓ Exceptional starting power for long haul on-highway vehicles with extra power demands
- ✓ Hybrid technology to sustain constant current loads for on-board accessories[†]
- ✓ 50% longer life with thicker full frame cast plates and glass mat separators for improved strength and durability[†]
- ✓ Platelock™ technology for extreme vibration and impact resistance[†]

Heavy Equipment

Heavy Duty

Manufactured using some of the toughest internal components and materials available in the battery industry. Century Heavy Duty batteries are designed and built tough to provide superior power and performance in commercial vehicles with high power demands.

- ✓ Exceptional starting power for commercial vehicles with high power demands
- ✓ Thicker plates and denser active material for extra strength and endurance
- ✓ Lower self-discharge and reduced water loss for longer service life
- ✓ Platelock™ technology reduces movement of internal plates for improved vibration resistance^

Deep Cycle

Deep Cycle Flooded

Century Flooded Deep Cycle batteries are designed and built right here in Australia[^] to handle our extreme climate and harsh operating conditions. They are a robust and dependable range of batteries designed for conventional applications and installations where reliable, long lasting power supply is required.

- ✓ Dependable cycling performance with superior heat resistance
- ✓ Platelock™ technology reduces movement of internal plates for improved vibration resistance[^]
- ✓ Full frame cast plates with glass mat separators for extra strength & cycling performance
- ✓ Designed for under bonnet use in 4x4's, SUV's, recreational and commercial vehicles

LONG CYCLE LIFE

DEEP DISCHARGE CAPABILITY

Deep Cycle AGM

The ultimate in deep cycle performance. Century AGM Deep Cycle batteries utilise the latest Absorbed Glass Mat technology to provide superior cycle life, maximum deep discharge capabilities and durability characteristics.

- ✓ Absorbed Glass Mat (AGM) Technology for superior cycle life
- ✓ Thicker full-frame cast plates for maximum deep discharge capabilities
- ✓ Spill-proof design allows for multi-angle fitment at up to a 90° angle[^]
- ✓ Exceptional shock and vibration resistance to handle the harshest environments

Deep Cycle

Deep Cycle Gel

Century Deep Cycle GEL batteries are extremely robust and designed for extreme applications where the ability to tolerate vibration is paramount. The internal components are encapsulated and immobilised in a gel-based electrolyte, offering an increased level of protection against damage and maximising battery life.

- ✓ Advanced GEL electrolyte for superior deep cycle performance in extreme conditions
- ✓ Thicker full-frame cast plates for maximum deep discharge capabilities
- ✓ Designed to withstand repeated recharge and discharge cycles

Deep Cycle Industrial

Century Deep Cycle Industrial batteries are a range of multi-purpose, maintainable 6, 8 and 12 volt Deep Cycle batteries designed for use in commercial and industrial machinery and some personal mobility equipment. They feature thicker, heavier battery plates, heavy duty internal connections, and a high-density shock resistant construction for superior current flow and exceptional vibration resistance.

- ✓ Engineered for superior deep cycle performance in commercial applications
- ✓ Heavy-duty, internal connections for improved conductivity and current flow
- ✓ Thicker full-frame cast plates for deep discharge and recharge efficiency
- ✓ Wingnut terminals suits most industrial equipment wiring looms

Dual Force+

Dual Force+

The Century Dual Force+ is the ultimate multi-purpose battery, providing powerful starting and cycling power for 4x4's, SUV's, caravans, deep cycle and marine applications.

With the option of angled fitment and a casing made from polypropylene, Dual Force+ is a strong, insulated and thermoplastic battery built to handle the extreme under-bonnet heat that can be expected during an Australian summer. The Dual Force + has been designed to handle the constant daily pressure and duress that is needed from a battery that provides cycling capabilities.

- ✓ The ultimate dual-purpose AGM battery – capable of engine starting and cycling applications
- ✓ Durable AGM construction with up to 20x greater vibration resistance
- ✓ Up to 4x more cycle life compared to standard automotive batteries
- ✓ Ideal for applications where a dual battery system is unsuitable

Deep cycle battery power calculator

Not sure how to calculate your power requirements?

Use our online interactive Deep Cycle battery Power Calculator to work out your estimated Ah power requirements.

STEP 1

Visit centurybatteries.com.au/products/deep-cycle/calculator

STEP 2

List the equipment and devices you wish to power - including their power consumption (in watts) and their estimated usage time (hours)

STEP 3

The online Deep Cycle battery Power Calculator quickly finds the most suitable battery to power your needs

	Equipment / Device	Power Consumption (Watts)	Usage Time per day (Hours)

Marine

Marine Pro

Century Marine Pro batteries are designed and manufactured in Australia to better suit our conditions and way of life. They're built tough to handle the rigours of wave pounding, delivering reliable starting power and performance when you need it most. The Marine Pro range can start engines from 70 – 350+hp and power multiple on-board accessories[‡].

- ✓ Superior starting power - starts engines from 70 – 350+hp
- ✓ Dual purpose – starting and semi-cycling capabilities for on-board accessories
- ✓ Thicker full frame cast plates[^] for improved strength and durability
- ✓ Platelock™ technology to combat the effects of wave pounding and damage from trailer transport

Marine Pro Cruiser

The Marine Pro Cruiser range is the perfect choice for powering larger marine vessels and other heavy-duty applications.

- ✓ Superior starting power for larger vessels with engines over 350hp
- ✓ Heavy-duty internal components designed to start heavy-duty applications
- ✓ Maintainable design for easy scheduled servicing and extended battery life
- ✓ Platelock™ technology to combat the effects of wave pounding and damage from engine vibration

Lawn & Garden

EverRide Maintenance Free Series

Century EverRide MF batteries are developed from some of the most advanced technical resources, and built tough to deliver superior starting power and performance in constant stop start applications.

- ✓ Maintenance free design – sealed to protect against dirt, dust and grass
- ✓ Calcium technology for lower self-discharge and longer life
- ✓ Platelock™ technology to combat vibration damage

DEPENDABLE STARTING POWER

LOW SELF DISCHARGE

ADDED STRENGTH & ENDURANCE

BUILT TO COMBAT VIBRATION

EverRide Maintainable Series

Engineered to protect against acid seepage, corrosion and vibration damage, Century EverRide maintainable batteries incorporate robust internal components to deliver dependable starting power and reliable performance in constant stop start applications.

- ✓ Low maintenance design allows easy top up of electrolyte for extended service life
- ✓ Robust internal components for improved deep discharge resistance
- ✓ Strong, durable antimonial cast plates for longer life

DEPENDABLE STARTING POWER

LOW SELF DISCHARGE

ADDED STRENGTH & ENDURANCE

BUILT TO COMBAT VIBRATION

Charging & Testing Equipment

.....

Midtronics

Midtronics' testers and their patented conductance technology are recognised worldwide as the standard for determining battery condition. They are the preferred testing method for battery warranty decisions for the majority of the world's leading vehicle manufacturers and dealerships.

Ideal for testing batteries both in and out of the vehicle, they provide fast, accurate, on-the-spot test results regarding a battery's state of health.

ITEM ID	PRODUCT TYPE	APPLICATION	TESTING RANGE	BATTERY TYPE	FEATURES
MIDTRONICS TESTERS					
191013	MDX-658P CY	Passenger Vehicle, 4x4, Truck, Motorcycle, Lawn & Garden, Marine Cranking	100 to 2000 CCA	Flooded, AGM, GEL, ISS & Auxiliary	Idle Stop-Start & Auxiliary battery testing. Integrated Printer.
191021	MDX-P300	Passenger Vehicle, 4x4, Lawn & Garden, Light Truck, Marine Cranking	100 to 1200 CCA	Flooded, AGM, GEL, ISS	Integrated Printer

DHC

A range of battery testing equipment that features patented Single Load Dynamic Resistance technology to simulate the real-world conditions a battery will face.

The testers will not be misled by common conditions such as high surface voltage, poor cell connections and contact impedance, delivering accurate results test after test.

ITEM ID	PRODUCT TYPE	APPLICATION	TESTING RANGE	BATTERY TYPE	FEATURES
DHC TESTERS

Chargers & Maintainers

Century's range of 6 Volt & 12 Volt battery chargers can charge batteries rated up to 240Ah¹ and maintain batteries rated up to 360Ah. Incorporating patented rejuvenation technology, the chargers have the ability to recover heavily discharged batteries, and will activate from as low as 3 Volts.[#]

ITEM ID	PRODUCT TYPE	APPLICATION	TESTING RANGE	BATTERY TYPE
CENTURY BATTERY CHARGERS & MAINTAINERS				
190012	CC61212	SMF (Calcium) AGM, Flooded & Gel, conventional lead-acid batteries	3 Volts	6V & 12V Batteries Charges batteries rated up to 24Ah* Maintains batteries rated up to 100Ah
190010	CC1206	SMF (Calcium) AGM, Flooded & Gel, conventional lead-acid batteries	3 Volts	12V Batteries Charges batteries rated up to 120Ah Maintains batteries rated up to 180Ah
190011	CC1212	SMF (Calcium) AGM, Flooded & Gel, conventional lead-acid batteries	3 Volts	12V Batteries Charges batteries rated up to 240Ah Maintains batteries rated up to 360Ah

*Conditions apply. Refer to the warranty section of the owner's manual. ¹Based on 5 to 30% of battery Ah ratings. For optimum charging, 10% of battery Ah rating is recommended for flooded batteries and 20% of battery Ah rating is recommended for AGM & Gel batteries. [#]8 Volt activation on the CC61212, when 12 Volt setting is selected.

Diagnostic Equipment

YU-FIT Battery Configurator

With the introduction of CO2 production control systems such as smart charging and Idle Start Stop (ISS) it is essential that the vehicle has the correct battery type and specification installed.

An increasing number of automotive manufacturers have introduced systems that now require a replacement battery to be correctly configured to the vehicle after installation.

Failure to configure the correct specification battery could result in:

- Undercharging or overcharging of the battery resulting in damage which is not covered by the manufacturer's warranty
- Loss of the ISS CO² production control system functionality
- Possible loss of non-critical vehicle system functions

Battery configuration prevents incorrect battery charging, ensures the correct operation of the ISS CO² production control system and prevents the loss of non-critical vehicle systems.

The Century YU-FIT battery configurator tool allows the configuration process to be carried out on a growing number of vehicles equipped with new technology smart charge and ISS systems.

How to use this guide

This selection guide helps you quickly determine the most suitable battery for your needs and how to get the most from your battery.

...

STEP 1

Determine your vehicles type, manufacturer, model and year of make

STEP 2

Turn to the correct page and select the battery performance type that suits your needs

STEP 3

Finally, simply find your battery on the battery bay and you're away

Vehicle look up guide

Using this guide is easy. Simply follow the steps below to find the right battery type that suits your needs and your vehicle.

Make/Model	Fuel Type	Date (month/year)	Highly Recommend	Recommend	Suitable	☰

Battery Care & Maintenance[^]

Checking batteries regularly can help to maximise battery life. A routine inspection at least once a month is recommended to maintain optimum performance.

Lead-acid batteries prefer to be kept fully charged, at a voltage of 12.5v or above. If a battery is left in a partially discharged or flat state for extended periods of time, irreversible internal damage will gradually begin to occur, greatly reducing the overall service life you will get out of it.

- Check the battery voltage using a voltmeter
- If the voltage is above 12.5v, the battery is charged and healthy
- If the voltage is at 12.5v or below, recharge the battery
- Re-check your battery voltage at least once a month
- If a battery voltage is consistently low, take it to a Century retailer for testing

[^]Always follow manufacturers guidelines.

Factors Affecting Battery Life

As batteries operate and age, they gradually lose their capacity. The constant charge and discharge process eventually leads to failure. Components corrode over time, electrical shorts occur and vibration causes damage; eventually causing failure. Overcharging and undercharging of a battery will also have a bearing on battery life.

Early Warning Signs

Battery Inspection

Discharged (flat) Batteries

Useful Tips

Scan the code to learn more

Battery Charging

Safety first

Before attempting to charge a battery with an external battery charger, it is important to be aware of the safety precautions when charging batteries and follow the instructions outlined by the charger manufacturer.

Charging current (for manual chargers)

The recommended safe charging current is 10% of the battery's 20 hour (Ah) rating. For example if you want to charge a 100Ah battery, the recommended charger current for this battery would be 10 Amps.

Selecting the correct charger

Lead acid batteries should be charged in 3 stages; constant current (boost), constant voltage (absorption) and float charge.

When choosing a battery charger, it is important to select a charger that delivers the specified charging voltage and current to suit the battery type.

New Battery Installation

Ensure your vehicle's ignition system is "off" before installing a new battery.

- Ensure check the battery size and terminal layout to ensure it matches your existing/old battery
- Double check the terminal posts to ensure the Positive(+) and Negative(-) terminals are on the correct sides
- Install the battery hold down clamp, tightening until the battery does not move
- Connect and tighten the Positive(+) terminal, ensuring it is pushed all the way down onto the battery post
- Connect the Negative(-) terminal in the same way
- If your battery setup has rubber caps to protect the terminals, slide these back into place

If in doubt, please contact your battery retailer for assistance or to obtain the correct information. Any mistakes made during installation - in particular connecting the terminals to the opposite battery posts - could potentially cause damage to your battery and also your vehicle's electrical system.

Century Batteries Nationwide Warranty

Each century battery is supplied with a warranty against defects for the period and application, as detailed on each battery. **Call 1300 361 161** for your nearest warranty claim location.

If our testing determines the battery is defective we will replace it, however the costs of delivering it to the warranty location and collecting it and any replacement are yours. The claim must be made within the warranty period listed on top of the battery. Dated proof of purchase is required. The warranty period for replacement starts on the date of purchase of the defective battery it replaces. **Call 1300 361 161** to make a claim. This warranty does not cover defects due to normal wear, abuse, damage, neglect, over or under charging or incorrect application, installation or maintenance.

This warranty is in addition to other rights and remedies available at law. Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

THIS WARRANTY DOES NOT COVER:

- ✗ A flat battery
- ✗ Normal wear and tear
- ✗ Physical damage
- ✗ Undercharging (sulphation)
- ✗ Incorrect application
- ✗ Negligence (before or during use)
- ✗ Overcharging
- ✗ Spillage from over filling
- ✗ Modifications to the battery
- ✗ Failure arising from the addition of fluids other than water
- ✗ Batteries used for motorsport or racing activities

Private Use Statement

Private use is a vehicle used for private needs, as opposed to business uses. These vehicles are generally defined as having only four wheels and are not used to carry passengers or goods for monetary purposes.

Battery Health & Safety[#]

Battery Acid

Battery acid can cause burns. Suitable hand, eye and face protection and protective clothing must be worn.

First Aid

For advice, contact the poisons information centre (phone 13 11 26 in Australia) or a doctor immediately. If in eyes, hold eyelids apart and flush the eye continuously with running water. Continue flushing until advised to stop by poisons information centre or doctor, or at least 15 minutes.

If skin or hair contact occurs, remove contaminated clothing and flush skin or hair with running water.

Acid Spill Response

Bund and neutralise spills with soda ash or other suitable alkali. Dispose of residue as chemical waste or as per local requirements.

If Electrolyte is Swallowed

Do NOT induce vomiting – give a glass of water. Seek immediate medical assistance.

Exploding Battery

Batteries generate explosive gases during vehicle operation and when charged separately. Flames, sparks, burning cigarettes or other ignition sources must be kept away at all times. Exercise caution when working with metallic tools or conductors to prevent short circuits and sparks.

Always Shield Eyes When Working Near Batteries

When charging batteries, work in a well-ventilated area - never in a closed room. Always turn battery charger or ignition off* before disconnecting a battery.

[#]As extracted and interpreted by product manufacturer from the Battery Council International Service Manual, Chapter 2, Thirteenth Edition. *In some vehicles, ignition may be required to be placed in accessory mode where electronic memory minder is present.
