INTRODUCTION

The Pacific islands of American Samoa are an unincorporated territory of the United States located between latitude 14°12' and 14°23' South and longitude 170°32' and 170°52' West. The five principal islands—Tutuila, Aunu'u, and the Manu'a Islands of Ofu, Olosega and Ta'u—have a land area of 197 km². They are volcanic, with narrow coastlines rising abruptly to tapered ridges. The ridges are comprised of primary and secondary forest, with 70% of the slopes greater than 30% (Wingert 1981). The highest elevations vary from 89 m on the small island of Aunu'u to 974 m on Ta'u; Matafao, 653 m, is the highest point on the main island of Tutuila.

Traditional subsistence farming is still concentrated along the coastal strips and lower slopes. Population pressure on the 140 km² island of Tutuila, however, is forcing development of slopes to 60%; approximately 90% of the more than 60,000 people in the Territory live on this island. Relatively level areas of importance are limited to the Tafuna (Leone) Plain on Tutuila and a few upland areas on the outer island of Ta'u. The wettest season is November-March, the driest season June-September. Yearly rainfall averages from 3,200 mm on the Tafuna Plain (airport) to 7,620 mm on Mt. Lata, Ta'u. The average temperature at Tafuna airport is about 28°C with an average high of 31°C and an average low of 25°C (Department of Commerce 1996).

Few plant disease epidemics have been recorded in American Samoa. This is partly due to traditional agroforestry practices. These practices include interplanting small areas of subsistence crops—taro, giant taro, tapioca, kava—among banana, breadfruit, coconut or forest trees. One recent exception was the 1993-1994 taro leaf blight epidemic caused by *Phytophthora colocasiae*. Taro (*Colocasia esculenta*) was a major crop in both American Samoa and independent Samoa, planted over large areas of the islands. When *P. colocasiae* arrived it rapidly spread through the susceptible Samoan cultivars. Establishment of leaf blight resistant taro from the Republic of Palau in 1997 has revived local production. Currently, breeding lines from Southeast Asia and the Pacific are being introduced to improve eating quality and increase genetic diversity.

Banana Bunchy Top Virus, devastating in many parts of the Pacific, was introduced to American Samoa in the late 1950s (Magee 1967). A territory-wide survey (Brooks 1999) showed an average of less than 5% of banana mats on Tutuila Island were infected and no sign of the disease in the Manu'a Islands. The percentage of disease in some of the commercial plantations, however, was over 10%. The main limitations to banana production are black leaf streak disease (*Mycosphaerella fijiensis*), fruit damage by banana scab moth larvae (*Nacoleia octasema*), and plant-parasitic nematodes.

A survey of banana plantations in 2002-2003 revealed that every field (n = 25) was infested with root-parasitic nematodes (Brooks 2004). The average number of these nematodes per commercial field (n = 16) was 28,500 per 100 g of roots. Spiral nematodes (*Helicotylenchus multicinctus*, *H. dihystera*) averaged 23,000 per 100 g of roots, and the more damaging burrowing nematode (*Radopholus similis*) averaged 4,680 per 100 g of roots. Two lesion nematodes, *Pratylenchus loosi* and *P. gibbicaudatus*, were new records for American Samoa. The former is usually found on tea and coffee and the latter has never been reported on *Musa* spp. This was only the second report of *P. gibbicaudatus* outside of Japan.

Previous plant disease lists for American Samoa have been based on short, infrequent visits by consultants, including Dumbleton (1954) and Firman (1975). McKenzie's work (1996) summarized these findings and others and, along with identifications from his 1989 survey, is the most complete record available. A technical paper on plant parasitic nematodes by Grandison was also published by the Secretariat of the Pacific Community (SPC) in 1996.

The following plant disease indexes present plant pathogenic organisms collected and identified in American Samoa between October 1998 and October 2006. Separate sections list wood decay fungi, plant-parasitic algae, and fungal pathogens isolated from insects. The high ratio of fungi to other parasitic organisms in these lists reflects their abundance and diversity in the warm, humid environment of the tropics. Fungi, as opposed to most bacteria and viruses, are also more amenable to identification in a small plant pathology laboratory with limited resources. Many of the specimens collected during the past six years were causing minor damage to their host. Due to the time and cost of having them identified at a reputable off-island facility, some of these identifications are tentative. A voucher collection – herbarium sheets, microscope slides, photomicrographs, and photographs – has been established at the Tauiliili Pemerika Center for Tropical Agricultural Research, USDA Land Grant Division, American Samoa Community College.

ABOUT THIS TEXT

Plant disease nomenclature, authorities, and modified host and pathogen index formats follow Farr et al. (1989). Plant names and authorities follow Farr (1989), Whistler (1994a), The Plant Names Project (1999), and the Index of Botanists (2001).

Host-pathogen index. Plant hosts are listed alphabetically by genus and species, followed by the author who first described them. Common and Samoan names, in brackets, follow the abbreviated author(s) names. Below each host name in alphabetical order are potential disease-causing organisms isolated from that host and the name of the disease or most common symptom. An accession number follows specimens deposited in the American Samoa Land Grant herbarium (ASLG). Most of the organisms in this list are known pathogens but may be present as saprophytes.

Color plates. Photographs of plant pathogens and plant disease signs or symptoms can be downloaded separately. Each plate is referred to in the indexes following the name of the host or pathogen.

Pathogen-host index. This is an alphabetical listing by genus of disease causing organisms followed by their authority and taxonomic classification. Below each pathogen are suggested species identifications based on morphology, growth characteristics in vivo or in culture, signs and symptoms, isolation from a known host, or published presence in American Samoa (McKenzie 1996). Unidentified species are listed as “sp.” Each species name is followed by the host from which it was isolated and the host’s common name.

Wood decay fungi. A list of macro-fungi collected by the author from 2001-2004 and accessioned into the Land Grant Herbarium (ASLG). Identifications confirmed by the USDA Forest Service Forest Products Laboratory, Center for Mycology Research, Madison, WI, are followed by an asterisk. The list includes wood decay fungi collected by McKenzie in 1989 (PDD), and other decay fungi mentioned by him in his 1996 report (no accession numbers).

Plant-parasitic algae and their host plants. Five species of parasitic algae in the genus *Cephaleuros* and two in *Stomatochroon* are listed, followed by the family, genus, and species of their host(s).

Fungus pathogens on insects. Several known entomopathogenic fungi have been isolated from insects. Most American Samoans do not use chemical pesticides and enhancing the indigenous population of insect pathogens is a potential biological control option.

English and Samoan plant names, botanical equivalents. Latin scientific names are given for common English and Samoan plant names.

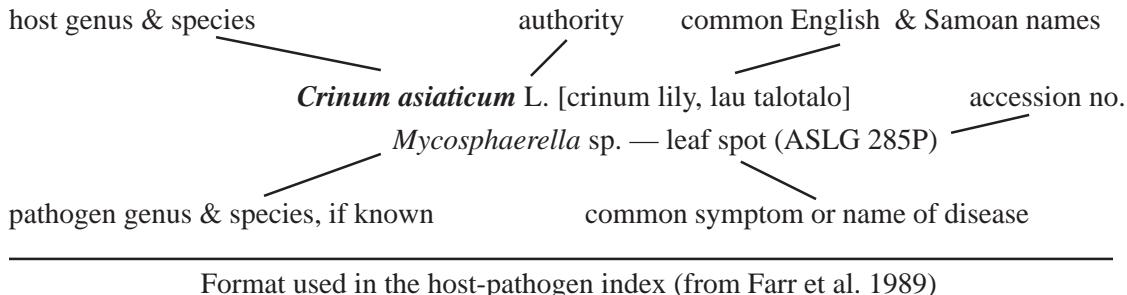

List of host plants by family. This is a useful entry for references like Farr et al. (1986) and Whistler (1994a), where it is necessary to know plant families in order to find genus and species information.

Partial list of pathogens recorded in American Samoa. Most plant pathogenic fungi and bacteria recorded in American Samoa are in the publication by EHC McKenzie (1996). This list is an update of McKenzie’s publication and includes pathogenic organisms identified by the author. The latter are followed by double asterisks (**). Banana nematodes described by Grandison (1996) are followed by a single asterisk (*).

Authors of plant and fungus names. Full names of abbreviated plant and fungus authorities listed in the indexes.

Bibliography. List of sources used to identify plant pathogens, entomopathogens, nematodes, plant-parasitic algae, and local flora.

HOST-PATHOGEN INDEX

Adenanthera pavonina L. [lopa]

Phellinus noxius — brown root rot

Aglaia samoensis A. Gray

Stagonospora sp. — from bark canker (ASLG479P)

Alocasia cucullata (Loureiro) G. Don [Chinese taro]

Colletotrichum sp. — leaf spot (ASLG242P)

Alocasia macrorrhiza (L.) G. Don [giant taro, ta’amu]

Cercospora sp. — leaf spot

Colletotrichum gloeosporioides — leaf spot (ASLG230P)

Glomerella cingulata — anthracnose (ASLG235P)

Helicotylenchus dihystera — spiral nematode (423P)

Leptosphaerulina trifolii — from taro leaf blight lesion (ASLG452P)

Macrophoma sp. — from taro leaf blight lesion (ASLG451P)

Mycosphaerella alocasiae — leaf spot (ASLG007P) (**Plate 2**)

Pestalotiopsis sp. — from leaf spot (ASLG033P)

Phoma sp. — from leaf spot (ASLG135P)

Phytophthora colocasiae — taro leaf blight (ASLG003,026,354,394,432P)

Pratylenchus sp. — lesion nematode (ASLG422P)

Angiopteris evecta Hoffm.

Cercospora sp. — leaf spot (ASLG472P)

Artocarpus altilis (Park.) Fosb. [breadfruit, ‘ulu]

Cercospora sp. — leaf spot (ASLG326P)
Colletotrichum sp. — from leaf spot, fruit necrosis (ASLG 344,349,358,368P) (**Plate 3**)
Glomerella sp. — angular leaf spot (ASLG150P)
Phellinus noxius — brown root rot (ASLG228P)
Phomopsis sp. — from necrotic spines on fruit (ASLG367P)
Phyllosticta artocarpi — angular leaf spot (ASLG084,225P)
Physalospora rhodina — leaf spot (ASLG 030P)
Phytophthora palmivora — fruit rot (ASLG343,347,352,356P)
Pseudocercospora artocarpi — leaf spot (ASLG326,456P)
Sclerotium sp. — rot of fruit on ground (ASLG369P)

***Barringtonia asiatica* (L.) Kurz [futu]**

Cercospora sp. — leaf spot
Phellinus noxius — brown root rot

***Barringtonia samoensis* A. Gray [faiaga]**

Phellinus noxius — brown root rot

***Bidens alba* (L.) DC. [beggar's-tick]**

Uromyces bidenticola — rust

***Bischofia javanica* Blume ['o'a]**

Pestalotiopsis sp. — leaf spot (ASLG167P)

***Bixa orellana* L. [lipstick-tree, loa]**

Cercospora bixae — leaf spot

***Bougainvillea spectabilis* Willd. [bougainvillea, felila]**

Cercosporidium bougainvilleae — leaf spot (ASLG154P) (**Plates 4, 5**)

***Brassica chinensis* var. *chinensis* (L.) Prain [Chinese cabbage, pak-choi, kapisi]**

Ascochyta sp. — from leaf spots (ASLG270P)
Cercospora brassicicola — from leaf necrosis (ASLG271P)
Colletotrichum gloeosporioides — from leaf necrosis (ASLG272,415P)
Erwinia sp. — bacterial crown rot
Leptosphaerulina trifolii — from leaf spots (ASLG 269,454P)
Pythium spp. — damping-off

***Broussonetia papyrifera* (L.) Venten. [paper-mulberry, u'a]**

Cercospora broussonetiae — leaf spot

Brunfelsia americana L. [lady-of-the-night]

Colletotrichum sp. — anthracnose (ASLG296P)

Lasiodiplodia theobromae — on anthracnose lesion (ASLG297P)

Caladium Venten. x *hortulanum* [caladium]

Phyllosticta sp. — leaf spot

Chaetomella sp. — from dead leaf tissue

Calophyllum neo-ebudicum Guillaumin [tamanu]

Phellinus noxius — brown root rot

Cananga odorata (Lam.) Hook. f. & Thoms. [moso'oi]

Colletotrichum gloeosporioides — branch dieback

Phellinus noxius — brown root rot (ASLG210,249P)

Canarium harveyi Seem. [mafoa]

Colletotrichum sp. — leaf spot (ASLG181P)

Phellinus noxius — brown root rot

Canna indica L. [canna lily, fagamanu]

Mycosphaerella sp. — leaf spot

Puccinia sp. — rust (ASLG020P)

Uredo pseudocannae — rust

Capsicum annuum L. [sweet and hot peppers, polo]

Colletotrichum sp. — anthracnose (ASLG200P) (**Plate 6**)

Phytophthora parasitica — root and crown rot (ASLG190P)

Ralstonia solanacearum — bacterial wilt (**Plate 15**)

Rhizopus stolonifer — fruit rot (ASLG201P)

Carica papaya L. [papaya, esi]

Calonectria sp. — from collar rot (ASLG350P)

Colletotrichum gloeosporioides — leaf spot (ASLG171P)

Corynespora cassiicola — target leaf spot (ASLG068,286P) (**Plates 7, 8**)

Macrophoma sp. — from fruit rot (ASLG430P)

Phoma sp. — stem canker (ASLG355P)

Phomopsis sp. — stem canker (ASLG370P)

Pythium sp. — damping off (ASLG353P)

Phytophthora palmivora — root and crown rot (ASLG351,357P,373,416,441,449P)

Carissa grandiflora (E. Mey.) A. DC. [natal plum]

Lasiodiplodia theobromae — branch dieback (ASLG274P) (**Plate 9**)

Pestalotiopsis sp. — leaf spot

Cerbera manghas L. [lava]

Phellinus noxius — brown root rot

Cieba pentandra (L.) Gaertn. [kapok, vavae]

Phellinus noxius — brown root rot (ASLG208P)

Citrus aurantifolia L. Swingle [lime]

Colletotrichum sp. — anthracnose

Lasiodiplodia theobromae — branch dieback (ASLG290P)

Citrus sp. L. [citrus, moli]

Capnodium sp. — sooty mold

Chaetomella sp. — on leaves

Colletotrichum gloeosporioides — leaf anthracnose

Lasiodiplodia theobromae — on dead bark (ASLG152P)

Meloidogyne sp. — root knot nematode

Phellinus noxius — (ASLG248P)

Phomopsis citri — citrus melanose

Sphaceloma fawcettii var. *scabiosa* — citrus scab (ASLG169P)

Cocos nucifera L. [coconut palm, niu]

Colletotrichum sp. — from coalesced leaf spots (ASLG162P)

Leptosphaeria sp. — gray leaf blotch (ASLG262P)

Mycosphaerella sp. — leaf spot (ASLG283P)

Pestalotiopsis palmarum — gray leaf spot (ASLG046P)

Phoma sp. — leaf spot (ASLG263P)

Phomopsis sp. — leaf spot (ASLG264P)

Phyllosticta sp. — leaf spot

Septoria sp. — from leaf spot

causal agent unknown — American Samoa coconut yellowing (ASLG226P)

Codiaeum variegatum (L.) Blume [croton]

Colletotrichum sp. — leaf spot (ASLG237P)

Coix lacryma-jobi L. [sanasa]

Mycosphaerella sp. — leaf spot (ASLG281P)

Colocasia esculenta (L.) Schott [taro, talo]

Cladosporium sp. — sooty mold

Cladosporium colocassiicola — leaf blight in greenhouse (ASLG467P) (**Plate 23**)

Colletotrichum gloeosporioides — from leaf blight lesions (ASLG256,397,460P)

Colletotrichum sp. — from chlorotic leaves (ASLG233P)

Curvularia sp. — from Leptosphaerulina leaf spot (ASLG170P)

Dasheen Mosaic Virus — leaf chlorosis, discoloration (**Plate 10**)

Fusarium solani — root and corm rot (ASLG308P)

Glomerella cingulata — from leaf blight lesions (ASLG257,419,460P)

Gonatobotryum sp. — on leaves and petioles

Helicotylenchus dihystera — nematode root damage (ASLG379,425P)

Helicotylenchus sp. — nematode root damage (ASLG023P)

Leptosphaeria sp. — from Leptosphaerulina leaf spot (ASLG147P)

Leptosphaerulina trifolii — leaf spot (ASLG143,412,420,456,457,474P) (**Plates 11, 12**)

Marasmiellus stenophyllus — stem and corm rot (ASLG027M)

Phoma sp. — from leaf blight lesions (ASLG255P)

Phytophthora colocasiae — taro leaf blight (ASLG003,354,394P) (**Plates 13, 14**)

Pythium aphanidermatum — root and corm rot (ASLG278P)

Pythium sp. — corm rot (ASLG378,427P)

Septoria sp. — from Leptosphaerulina leaf spot

Cordia aspera Forst. f. [tou]

Phellinus noxius — brown root rot

Cordyline terminalis (L.) Kunth [ti]

Ascochyta sp. — from leaf spot

Colletotrichum sp. — from leaf spot

Pestalotiopsis sp. — from leaf spot

Phoma sp. — leaf spot (ASLG231P)

Phyllosticta sp. — from leaf spot (ASLG070P)

Crinum asiaticum L. [crinum lily, lau talatalo]

Mycosphaerella sp. — leaf spot (ASLG285P)

Crossostylis biflora Forst. [saitamu]

Phellinus noxius — brown root rot

Cucumis sativus L. [cucumber, kukama]

Cercospora citrullina — leaf spot

Corynespora cassiicola — leaf spot (ASLG184,360,366P)

Didymella bryoniae — gummy stem blight (ASLG207P)
Erysiphe sp. — powdery mildew (ASLG361P)
Leptosphaerulina trifolii — leaf spot (ASLG465P)
Meloidogyne sp. — root knot nematode (376P)
Oidium sp. — powdery mildew
Phoma cucurbitacearum — gummy stem blight, leaf spot (ASLG149)
Pythium aphanidermatum — wilt, fruit, root, crown rot (ASLG177P) (**Plates 16**)
Pythium spp. — damping-off, root and crown rot (ASLG016,177,459P)
Rhizoctonia solani — damping-off, fruit rot (ASLG142P)
Zucchini Yellow Mosaic Virus — stunt, distortion, death (ASLG391P)

Cuphea melvilla Lindl. [firecracker plant]
Phyllosticta sp. — from necrotic leaf tip (ASLG294P)

Cyperus rotundus L. [purple nut sedge, mumuta]
Puccinia canaliculata — leaf rust (ASLG059P)

Dendrolobium umbellatum (L.) Benth. [lala]
Cercospora sp. — leaf spot (ASLG145P)
Pestalotiopsis sp. — from leaf spot

Diffenbachia Schott [dumbcane]
Lophodermium sp. — leaf spot

Digitaria setigera Roem. & F.W. Schultz [crab grass]
Puccinia oahuensis — leaf and stem rust (ASLG130P)

Dioscorea bulbifera L. [bitter yam, soi]
Cercospora sp. — leaf spot (ASLG407P)
Mycosphaerella sp. — leaf spot (ASLG408P)

Diospyros samoensis A. Gray [au'auli]

Glomerella sp. — from leaf spot (ASLG365P)
Phellinus noxius — brown root rot
Phyllosticta sp. — leaf spot (ASLG362P)

Dysoxylum samoense A. Gray [tufaso]
Phellinus noxius — brown root rot (ASLG385P)
Pseudocercospora subsessilis — leaf spot (ASLG199P)

Elattostachys falcata (A. Gray) Radlk. [taputo'i]

Phellinus noxius — brown root rot

Erythrina subumbrans (Hassk.) Merr. [gatae palagi]

Phoma erythrinicola — leaf spot

Erythrina variegata L. [coral tree, gatae]

Colletotrichum gloeosporioides — leaf spot (ASLG073P)

Phoma sp. — leaf spot (ASLG234, 238P)

Euphorbia pulcherrima Willd. ex Klotzsch [poinsettia]

Colletotrichum sp. — leaf anthracnose (ASLG390P)

Dothiorella sp. — branch dieback

Glomerella sp. — leaf necrosis

Lasiodiplodia theobromae — branch dieback (ASLG172P)

Phoma sp. — branch dieback (ASLG151P)

Phomopsis sp. — branch dieback

Sphaceloma poinsettiae — leaf and stem scab (ASLG389P)

Fagraea berteroana A. Gray [pualulu]

Sphaerulina sp. — leaf spot (ASLG258P)

Colletotrichum sp. — leaf spot

Faradaya amicorum Seem. [mamalupe]

Pestalotiopsis sp. — leaf spot (ASLG192P)

Ficus elastica Roxb. ex Horne. [rubber plant]

Mycosphaerella sp. — leaf spot (ASLG254P)

Ficus obliqua Forst. f. [banyan tree, aoa]

Phellinus noxius — brown root rot

Ficus scabra (mati vao)Forst. f. [mati'ata]

Phyllachora sp. — tar spot (ASLG198,280,330P)

Ficus tinctoria Forst. f. [dyer's fig; mati]

Phyllachora sp. — tar spot (ASLG229P)

Phellinus noxius — brown root rot

Fluggea flexuosa Muell. Arg. [poumuli]

Colletotrichum sp. — from stem canker (ASLG426P)

Phellinus noxius — brown root rot (ASLG251P)

Glochidion ramiflorum Forst. [masame]

Phellinus noxius — brown root rot

Gloxinia perennis Druce [Canterbury bells]

Colletotrichum sp. — blossom blight (ASLG300P)

Corynespora cassiicola — on blighted blossoms (ASLG301P)

Hedychium coronarium J. Konig ex Retz. [white ginger, teuila]

Colletotrichum sp. — leaf spot

Leptosphaeria sp. — leaf spot (ASLG260P)

Mycosphaerella hedychii — leaf spot (ASLG074P)

Pestalotiopsis sp. — leaf spot

Phoma sp. — leaf spot (ASLG261P)

Heliconia humilis L. [lobster claw]

Colletotrichum sp. — from leaf anthracnose (ASLG099P)

Curvularia sp. — from leaf anthracnose (ASLG 158P)

Mycosphaerella sp. — from leaf anthracnose

Physalospora sp. — from leaf anthracnose

Septoria sp. — from leaf anthracnose (ASLG157P)

Heliconia psittacorum L. fil [parrot flower]

Curvularia sp. — leaf spot (ASLG268P)

Dothiorella sp. — from leaf spot

Leptosphaeria sp. — from leaf spot

Heliconia sp. L. [wild heliconia]

Cercospora sp. — leaf spot (ASLG404P)

Fusarium sp. — root, rhizome rot (ASLG377P)

Hernandia nymphaeifolia (Presl.) Kub. [pu'a]

Phellinus noxius — brown root rot

Hibiscus manihot L.[edible hibiscus, pele]

Cercospora malayensis — angular leaf spot (ASLG403P)

Cercospora sp. — leaf spot (ASLG218P)

Hibiscus rosa-sinensis L. [China rose, Hawaiian hibiscus, ‘aute]

Cercospora althaeina — leaf spot (ASLG166P)

Colletotrichum — leaf spot (ASLG240P)
Curvularia sp. — leaf anthracnose
Leptosphaeria sp. — from leaf spots (ASLG241P)
Phellinus noxius — root and crown rot (ASLG188P)
Phoma sp. — leaf spot (ASLG239P)
Phyllosticta sp. — from leaf spots
unidentified — sooty mold

Phyllosticta musarum — freckle (ASLG288P)
Pratylenchus gibbicaudatus — lesion nematode (ASLG384P)
Pratylenchus loosi — lesion nematode (ASLG022,383P)
Pseudocercospora fijiensis — black leaf streak (ASLG287,340,418,448P)
Pyrenopeziza sp. — from black leaf streak lesion (ASLG342P)
Radopholus similis — burrowing nematode (ASLG011P)
Sphaerulina sp. — leaf spot (ASLG338P)
Uredo musae — banana rust (ASLG282,291P)

Myristica fatua Houtt. [Samoan nutmeg, ‘atone’]
Phellinus noxius — brown root rot (ASLG174P,387P)

Neonauclea forsteri (Seem. ex Havil.) Merr. [afa]
Phellinus noxius — brown root rot

Nicolaia elatior Horan. [torch ginger]
Pestalotiopsis sp. — leaf blight

Pandanus whitmeeanus Mart. [screwpine; paogo, fasa, lau fala]
Pestalotiopsis palmarum — leaf spot (ASLG044P)
Pestalozziella sp. — from leaf spot

Paspalum conjugatum Bergius [sour paspalum, sourgrass]
Physopella sp. — rust (ASLG303P)

Persea americana Miller [avocado, ‘avoka’]
Botryosphaeria dothidea — from leaf spot
Discosia sp. — from leaf spot
*Dothiorella sp. (*Fusicoccum*)* — branch canker (ASLG136P)
Fusarium solani — root rot (ASLG196P)
Lasiodiplodia theobromae — root rot (ASLG205P)

Phaseolus vulgaris L. [French bean, green bean, etc.]
Colletotrichum lindemuthianum — anthracnose (ASLG304P)

Philodendron Schott [heart-leaf philodendron]
Physalospora sp. — leaf spot (ASLG159P)

Piper methysticum Forst. f. [kava]

Colletotrichum sp. — leaf anthracnose (ASLG334P)

Cucumber Mosaic (cucumo)Virus — kava wilt, dieback (ASLG313P) (**Plate 30**)

Phyllachora sp. — tar spot on leaves (ASLG392P)

Pipturus argenteus (Forst. f.) Wedd. [soga]

Phellinus noxius — brown root rot

Planchonella grayana St. John ['ala'a]

Phellinus noxius — brown root rot

Planchonella samoensis H.J. Lam ex Christoph. [mamalava]

Phellinus noxius — brown root rot

Planchonella torricellensis (K. Schum.) Lam [mamalava]

Pestalotiopsis sp. — leaf spot

Rhynchosphaeria sp. — 'shot hole' leaf spot

Plumeria sp. L. [frangipani, pua fiti]

Coleosporium plumeriae — rust on leaves (ASLG006P) (**Plate 31**)

Polyscias guilfoylei (W. Bull) L.H. Bailey [geranium-leaf aralia]

Pseudocercospora sp. — leaf spot (ASLG032P)

Colletotrichum sp. — leaf spot

Glomerella sp. — leaf spot

Polyscias scutellaria 'Tricochleata' (W. Bull) L.H. Bailey [panax, tanitani]

Pseudocercospora sp. (*P. panacis*?) — leaf spot (ASLG168,473P) (**Plate 32**)

Colletotrichum gloeosporioides — leaf spot

Glomerella sp. — from leaf spot

Pometia pinnata Forst. [tava]

Cladosporium sp. — sooty mold

Colletotrichum gloeosporioides — from leaf anthracnose (ASLG411P)

Pestalotiopsis sp. — from leaf anthracnose (ASLG410P)

Phellinus noxius — brown root rot

Pritchardia pacifica Seem. & H. Wendl. ex Wendl. [Fiji Island fan palm, niu piu]

Bipolaris sp. — leaf spot (ASLG316P)

Botryosphaeria sp. — on leaf spot

Colletotrichum sp. — leaf spot (ASLG213P,375P)

Curvularia sp. — from leaf spots (ASLG214P)
Leptosphaeria sp. — from leaf spots (ASLG212P)
Pestalotiopsis palmarum — leaf spot
Phomopsis sp. — leaf spot (374P)

Pseuderanthemum carruthersii* var. *reticulatum (Seemann) Guillaumin [el dorado]

Cercospora sp. — leaf spot (ASLG221,329P)
Colletotrichum sp. — leaf spot (ASLG080P)
Glomerella sp. — leaf spot (ASLG180P)

Psidium guajava L. [guava, apple guava]

Colletotrichum gloeosporioides — fruit spot
Pestalotiopsis sp. — from necrotic fruit (ASLG421P)

Puccinia canaliculata (Schwein.) Lagerh. [rust fungus on purple nut sedge]

Sphaerellopsis filum — mycoparasite of *P. canaliculata* (ASLG060,131,328P) (**Plate 17**)

Pueraria lobata (Willd.) Ohwi [kudzu]

Cercospora sp. — leaf spot (ASLG298P)
Colletotrichum sp. — angular leaf spot (ASLG088P)
Guignardia sp. — from leaf spot
Synchytrium minutum — ‘false rust’ (ASLG299P)

Rhus taitensis Guillemin [tavai]

Phellinus noxius — brown root rot
Phoma sp. — leaf spot (ASLG220P)

Rollinia deliciosa Saff. [rollinia]

Colletotrichum sp. — leaf anthracnose (ASLG363P)
Didymella sp. — from anthracnose lesions (ASLG364P)

Rosa chinensis Jacq. [rose]

Diplocarpon rosae — leaf spot (ASLG450P)
Marssonina rosae — leaf spot (ASLG289P)
Monochaetia sp. — from stem canker (ASLG462P)
Mycosphaerella rosicola — leaf spot (ASLG209P)

Samanea saman (Jacq.) Merr. [monkeypod tree, tamaligi palagi]

Phellinus noxius — brown root rot

Sanchezia Ruiz & Pav. [not known]

Mycosphaerella sp. — leaf spot

Solanum melongena L. [eggplant, aubergine, israeli]
Phoma sp. — leaf spot, fruit spot (ASLG160P)
Cercospora egenula — leaf spot (ASLG206P)
Cercospora melongenae — leaf spot (ASLG161P)

WOOD DECAY FUNGI

Fungi collected from decaying wood of living or dead plants are listed in alphabetical order, by genus, within their respective division, Ascomycota or Basidiomycota. Each fungal taxon is followed by its authority, family or order, and accession number in the American Samoa Community College Land Grant Program Herbarium (**ASLG**), or Landcare Research facility (**PDD**) in Auckland, New Zealand. The location of voucher specimens for some previously reported species are unknown (--).
