

**Report for the Davis Expedition Committee of the Royal Botanic Garden  
Edinburgh (RBGE)/ Kebun Raya (KR) Joint Expedition to Sulawesi, 24 March-3  
May 2002**

**Abstract:**

A botanical field trip to North Sulawesi was undertaken in conjunction with staff of the Kebun Raya, Bogor, Indonesia. The aim of the expedition was to collect both living and herbarium material of families of research interest to both institutions, primarily Gesneriaceae, Zingiberaceae and Ericaceae, as well as undertaking general herbarium collecting, in multiple sets, of material of interest to Bogor, RBGE and other institutions working on the Flora Malesiana project. My main objective on the expedition was the targeted collecting of material of *Cyrtandra* (Gesneriaceae) for the preparation of an account of the *Cyrtandra* flora of Sulawesi. Fifteen collections, of herbarium, spirit and DNA material, of *Cyrtandra* were made. Three of these are undescribed. In total, two hundred and sixty herbarium collections were made and one hundred and fifty nine living collections. The top set of all herbarium material was deposited in Bogor and a second set, where possible, was also left for distribution to the regional herbarium in Manado. A selection of the living material collected was left at Cibodas Botanic Garden in Java to be grown for future research and display. All other material, living and herbarium, was taken to RBGE for research and distribution.

HANNAH ATKINS

**Report for the Davis Expedition Committee of the Royal Botanic Garden  
Edinburgh (RBGE)/ Kebun Raya (KR) Joint Expedition to Sulawesi, 24 March-3  
May 2002**

A botanical field trip to North Sulawesi was undertaken in conjunction with staff of the Kebun Raya, Bogor, Indonesia. The aim of the expedition was to collect both living and herbarium material of families of research interest to both institutions, primarily Gesneriaceae, Zingiberaceae and Ericaceae, as well as undertaking general herbarium collecting, in multiple sets, of material of interest to Bogor, RBGE and other institutions working on the Flora Malesiana project. Five weeks were spent in Sulawesi, mostly in the northern province of Gorontalo. Earlier plans to collect in Central Sulawesi had to be altered due to problems in Poso. Ascents of two mountains, Gunung Gambuta and Gunung Ali, in the Nani Wartabone National Park were undertaken, and of a third mountain, Gunung Biolihutu outside of the Park boundaries. Lowland collecting was also carried out in two localities, at the Cagar Alam Panua and at Lombongo in the Nani Wartabone National Park. In total, two hundred and sixty herbarium collections were made and one hundred and fifty nine living collections. The top set of all herbarium material was deposited at the Herbarium Bogoriense and a second set, where possible, was also left for distribution to the regional herbarium in Manado. A selection of the living material collected was left at Cibodas Botanic Garden in Java to be grown for future research and display. All other material, living and herbarium, was taken to RBGE for research and distribution.

My main objective on the expedition was the targeted collecting of material of *Cyrtandra* (Gesneriaceae) for the preparation of an account of the *Cyrtandra* flora of Sulawesi. Fifteen collections, of herbarium, spirit and DNA material, of *Cyrtandra* were made. Three of the species collected are undescribed. These new species will be described and illustrated in the flora account. The DNA samples will be sequenced and added to those already held at RBGE to produce an evolutionary history of the genus in the region, an invaluable tool for considering biogeographic patterns in this complicated region. One of the undescribed species was also successfully brought back to the garden as living material and is currently in quarantine. Seed of a further five *Cyrtandra* collections was brought back for future propagation.

The expedition was very successful and it is hoped that it will be possible to continue to work collaboratively with the Kebun Raya in this way in the future.

**Itinerary:**

23 Mar	Depart <b>Edinburgh</b>
24	Arrive <b>Jakarta</b> , collected at airport and taken to <b>Bogor</b>
25	Meeting with Dr D Darnaedi, Kebun Raya. Visits to LIPI offices and Police to obtain necessary permits.
26	Meeting with Dr Irawati (Herbarium Bogoriense); working in Herbarium.
27	Visit to <b>Cibodas Botanic Garden</b>
28	Expedition preparation; herbarium work
29	Herbarium work.
30	Final preparations for fieldwork
31	Flight from Jakarta to <b>Manado</b> via Makassar

1 April	Manado: visit to Forestry Office for permits; transport arrangements
2	Drive to <b>Kotamobagu</b> to visit Nani Wartabone National Park Head Office for permits and then on to Limboto
3	Arrive in <b>Gorontalo</b> , shopping for supplies and then on to <b>Tulabolo</b> (last village accessible by car before <b>Gunung Gambuta</b> )
4	In Tulabolo - arranging porters and collecting in forest near village
5	Walk from Tulabolo to <b>Pinogu</b> (last village before Gunung Gambuta)
6	Arranging porters and clarifying route for 9 day trip to Gunung Gambuta; collecting in forest near village
7	Leave for Gunung Gambuta – walk to camp 1 with some collecting in lowland rainforest en route.
8	Walk to camp 2 – collecting around camp
9	Walk to camp 3 (base camp) at c. 900 m; collecting round camp
10	Collecting on Gunung Gambuta to c. 1450 m
11	'Fly camp' set up at c.1500 m in preparation for reaching summit the following day; collecting around fly camp in afternoon..
12	Final ascent to summit of Gunung Gambuta (1954 m).
13	Return to camp 2
14	Return to Pinogu
15	Walk from Pinogu to Tolabolu and drive back to Gorontalo
16	In Gorontalo
17	In Gorontalo
18	Drive to Desa Popaya and stay in Forestry hut on edge of <b>Cagar Alam Panua</b> (nature reserve)
19	Collecting in lowland rainforest in Cagar Alam Panua and drive back to Gorontalo
20	In Gorontalo
21	Drive to <b>Bululi</b> (last village accessible by car before <b>Gunung Boliohutu</b> )
22	Walk to camp 1; collecting around camp
23	Collecting from camp 1 to c. 650 m
24	Walk to camp 2; collecting around camp
25	Camp moved back to original position (not enough water at camp 2); collecting to c. 1100 m
26	Camp 1 flooded as a result of two days of heavy rain – retreated to hut on higher ground
27	Return to Bululi then Gorontalo and then on to <b>Tumbulilato</b> (last village to arrange porters and supplies for ascent of <b>Gunung Ali</b> )
28	Begin ascent of Gunung Ali – heavy rain caused rivers to flood. Too dangerous to continue. No prospect of change in situation, returned to Tumbulilato and then back to Gorontalo
29	In Gorontalo – sorting specimens
30	Collecting in lowland forest in <b>Lombongo</b> in Nani Wartabone National Park
1 May	Drive to Manado
2	In Manado – packing specimens
3	Flight to Jakarta via Makassar; thence to Bogor
4	In Bogor
5	Drive to Cibodas Botanic Garden
6	Collecting on Gunung Gede
7	Workshop on Gesneriaceae, Zingiberaceae and propagation methods to staff

	at Cibodas
8	Air freight of herbarium specimens to UK
9	Visiting BIOTROP; return to Edinburgh

### **Collections**

Attached is a list of the collections in numerical order giving the scientific name to species' level where known, otherwise, the family and/ or genus is recorded.

.SPECIMENS	COL	FAMILY.....	NAME.....
165608	1	ASCLEPIADACEAE	Hoya
165646	2	BEGONIACEAE	Begonia
165649	4		
165650	5	CELASTRACEAE	
165651	6	COMMELINACEAE	
165654	9	ZINGIBERACEAE	Amomum
165655	10		
165656	11	GESNERIACEAE	Rhynchotechum
165657	12	URTICACEAE	Elatostema
165658	13	ACANTHACEAE	
165659	14	URTICACEAE	
165660	16	ASCLEPIADACEAE	Hoya
165661	17	ORCHIDACEAE	Cleisostoma
165663	19	EUPHORBIACEAE	Mallotus
165664	20	EUPHORBIACEAE	Macaranga
165728	21	PIPERACEAE	Piper
165729	22	MORACEAE	Ficus
165730	23	ARACEAE	
165741	24	MORACEAE	Ficus
165742	25	LEGUMINOSAE	
165743	26	CECROPIACEAE	Poikilospermum
165744	27	RUBIACEAE	Myrmecodia
165746	29	URTICACEAE	Elatostema
165748	30	MELASTOMATAACEAE	
165750	31	ZINGIBERACEAE	Etlingera
165751	32	SCROPHULARIACEAE	Torenia
165752	33	PIPERACEAE	Peperomia
165753	34	ACTINIDIACEAE	Saurauia
165754	35	ZINGIBERACEAE	Alpinia eremochlamys K.Schum.
165755	36	RUBIACEAE	
165756	37	BALSAMINACEAE	Impatiens
165757	38	GESNERIACEAE	Cyrtandra
165759	39	ZINGIBERACEAE	Etlingera
165760	40	GESNERIACEAE	Cyrtandra polyneura (C.B.Clarke) B.L.Burt
165761	41	GESNERIACEAE	Aeschynanthus
165762	42	MELASTOMATAACEAE	Medinilla
165763	43	GESNERIACEAE	Epithema
165764	44	PIPERACEAE	Peperomia
165765	45	CRUCIFERAE	
165766	46	BEGONIACEAE	Begonia
165767	47	VITTARIACEAE	
165768	48	UMBELLIFERAE	Hydrocotyle
165769	49	BEGONIACEAE	Begonia
165770	50	DILLENACEAE	Dillenia
