# Globally Important Agricultural Heritage Systems GIAHS

Yoshihide Endo  
GIAHS Coordinator  
FAO

30 de octubre 2018, Ciudad de México

## FAO GIAHS Programme

1. GIAHS have been formed in harsh geographic/environmental conditions and transferred by farmers for many generations.
2. FAO GIAHS programme is to identify and designate the remarkable agricultural systems of global importance.
3. Purpose of the GIAHS programme:
  - 1) **Dynamic Conservation** of the sites, namely:
    - (i) Conservation,
    - (ii) Adaptation to contemporary conditions and
    - (iii) Sustainable development of the site:
  - 2) Showcases for successful experiences for sustainable agricultural production

# DIÁLOGO REGIONAL DE ALTO NIVEL

EN LOS SECTORES AGROPECUARIO, FORESTAL Y PESQUERO

## Dynamic Conservation

Farmers, Local Community

National and local government

Policy makers, NGOs

Academia, Researchers

### Making Action Plan

AP should be made for Dynamic Conservation

All possible Measures to Achieve Dynamic Conservation

Maintenance of Core Elements of GIAHS

- Adaptation to Contemporary Environment
- Social/Economic Development

### Implementation of Action Plan

Monitoring of its Impacts

Evaluation

Correction

# Possible Measures for Dynamic Conservation

**Knowledge dissemination on GIAHS**

**Strengthening the Systems and Capacity for Action Plan Implementation**

**Improved Management of Agricultural Resources**

**Conservation and Sustainable Use of Agrobiodiversity**

**Improvement of agricultural production methods**

**Sales Promotion of the Agricultural Products**

**Promotion of tourism and cultural activities and local cuisine**

**Empowerment of women and more involvement of local community in the decision making**

## Expected Outcomes

**Positive mind set changes of local farmers**

**Promotion of agricultural production in the site**

**Increased Incomes and welfare of family famers**

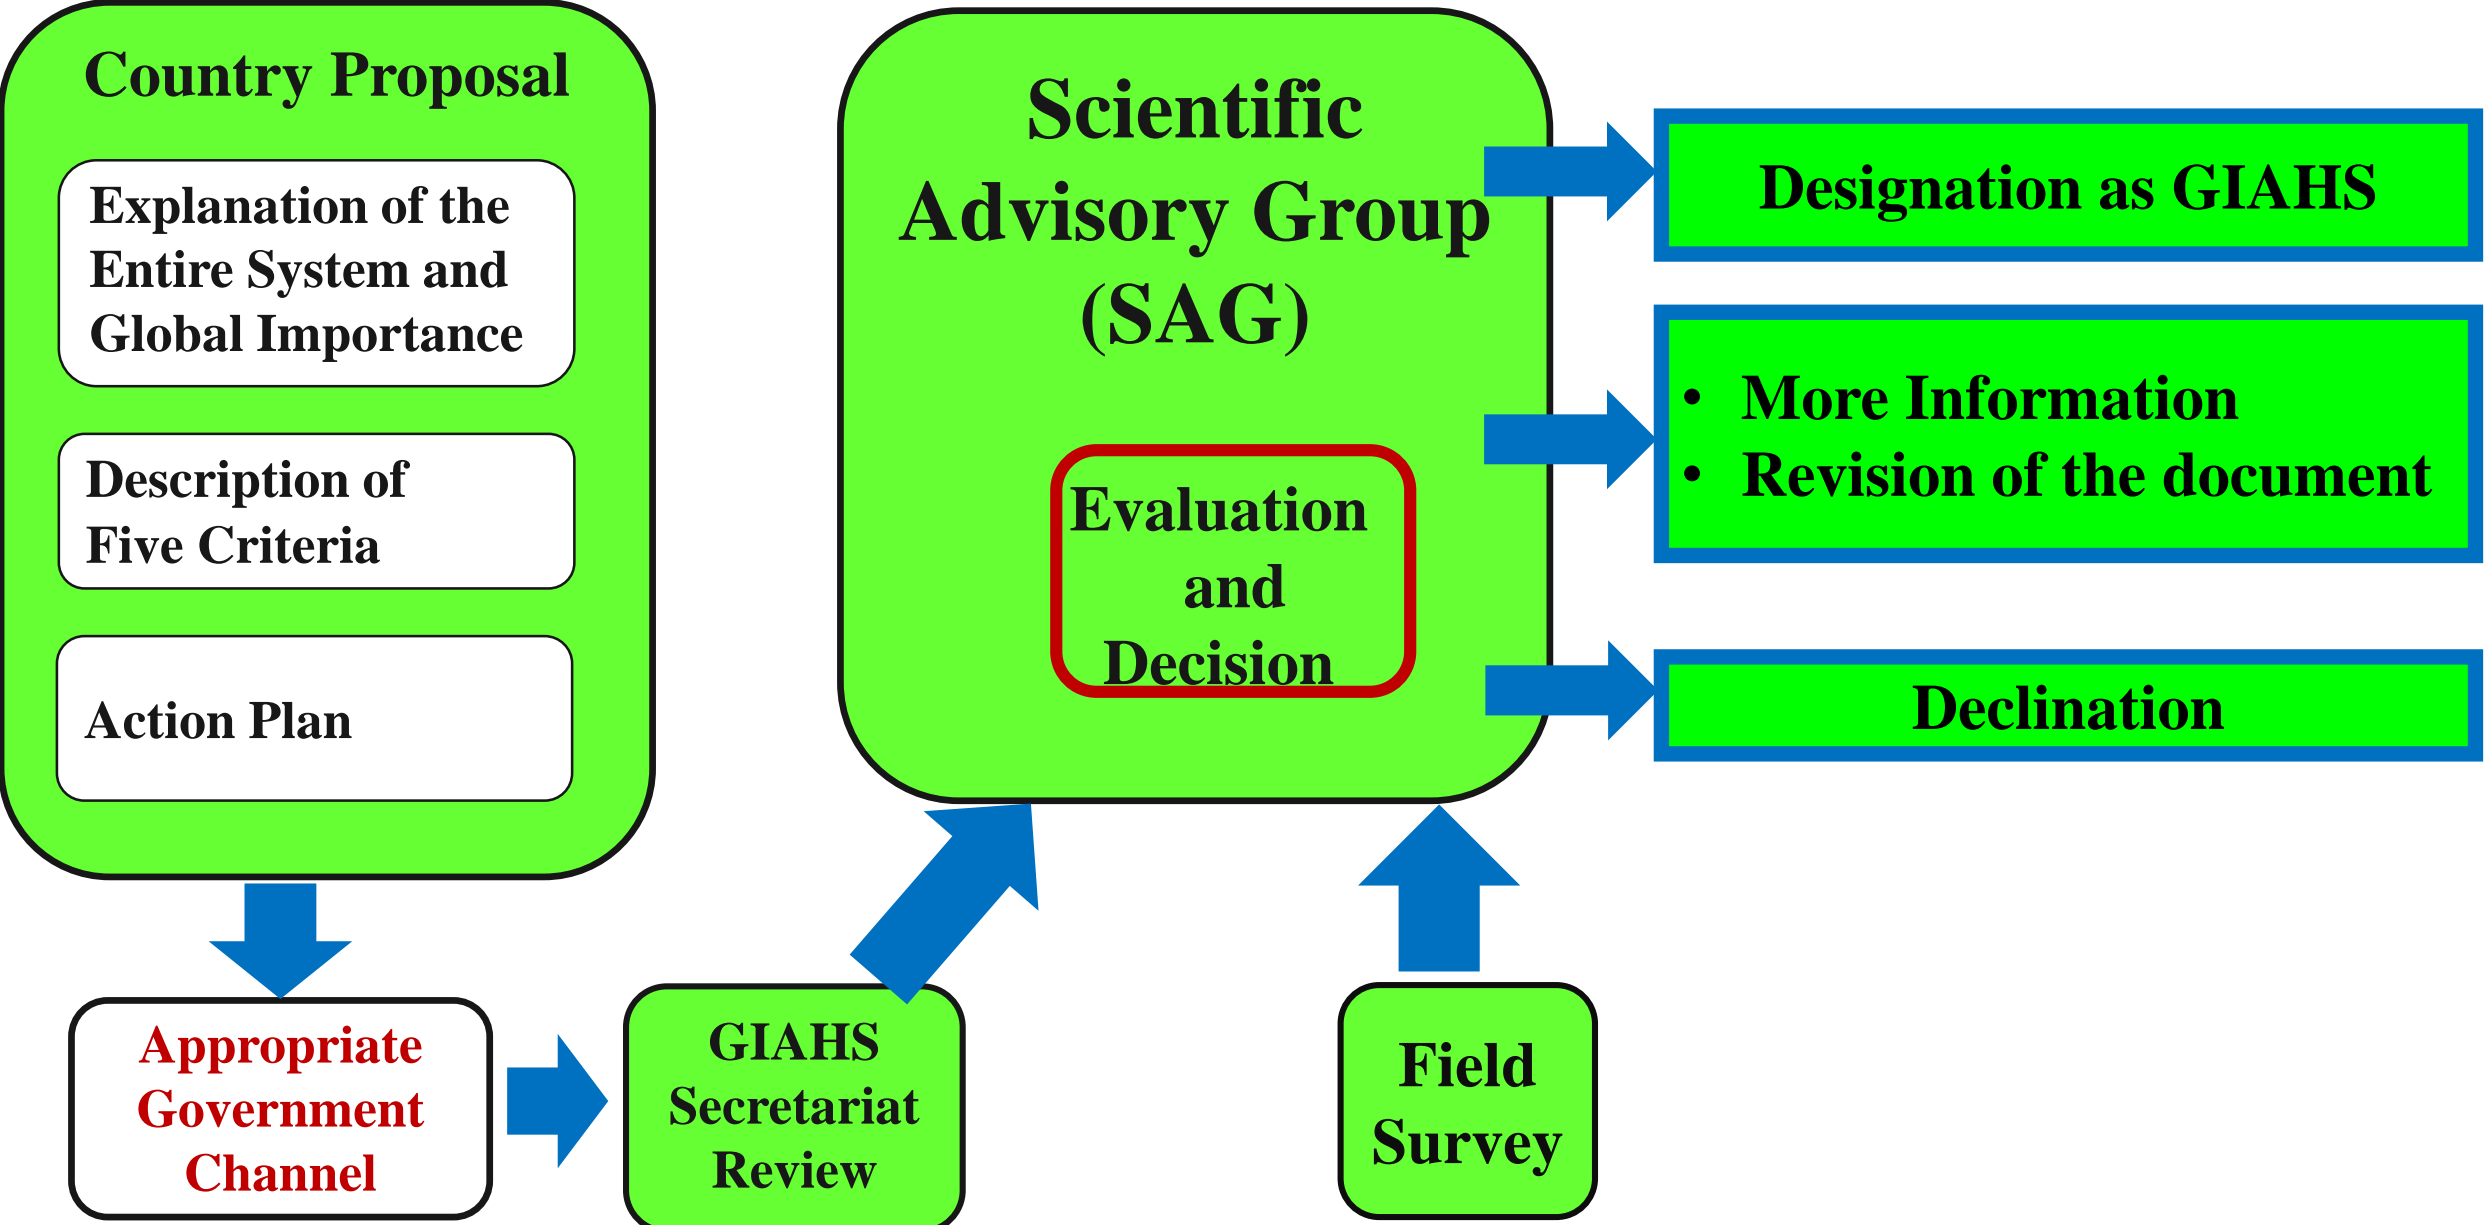

**Enhanced Values of agricultural products**

**Conservation of agrobiodiversity**

**Further promotion of harmonization of agriculture with the environment**

**Development of value changes for GIAHS site farmers**

## II. GIAHS Sites in the World

# List of designated GIAHS sites

Countries	Name of sites/systems	Year	
Algeria	1. Ghout System (Oases of the Maghreb)	2011	
Bangladesh	2. Floating Garden Agricultural Practices	2015	
Chile	3. Chiloé Agriculture	2011	
China	4. Rice Fish Culture	2005	
	5. Wannian Traditional Rice Culture	2010	
	6. Hani Rice Terraces	2010	
	7. Dong's Rice Fish Duck System	2011	
	8. Pu'er Traditional Tea Agrosystem	2012	
	9. Aohan Dryland Farming System	2012	
	10. Kuajishan Ancient Chinese Torreya	2013	
	11. Urban Agricultural Heritage – Xuanhua Grape Garden	2013	
	12. Jiaxian Traditional Chinese Date Gardens	2014	
	13. Xinghua Duotian Agrosystem	2014	
	14. Fuzhou Jasmine and Tea Culture System	2014	
	15. Diebu Zhagana Agriculture-Forestry-Animal Husbandry Composite System	2017	
	16. Zhejiang Huzhou Mulberry-dyke & Fish-pond System	2017	
	17. Traditional Mulberry System in Xiajin's Ancient Yellow River Course	2018	
	18. Rice Terraces in Southern Mountainous and Hilly Areas, China	2018	
	Egypt	19. Dates production System in Siwa Oasis	2016
	India	20. Saffron Heritage of Kashmir	2011
		21. Koraput Traditional Agriculture	2012
22. Kuttanad Below Sea Level Farming System		2013	
Iran	23. Qanat Irrigated Agricultural Heritage Systems, Kashan	2014	
Italy	24. Olive groves of the slopes between Assisi and Spoleto	2018	
Japan	25. Noto's Satoyama and Satoumi	2011	
	26. Sado's Satoyama in Harmony with Japanese Crested Ibis	2011	
	27. Managing Aso Grasslands for Sustainable Agriculture	2013	
	28. Traditional Tea-grass Integrated System in Shizuoka	2013	
	29. Kunisaki Peninsula Usa Integrated Forestry, Agriculture and Fisheries System	2013	
	30. Ayu of the Nagara River System	2015	
	31. Minabe-Tanabe Ume System	2015	
	32. Takachihogo-Shiibayama Mountainous Agriculture and Forestry System	2015	
	33. Osaki Kodo's traditional water management system for sustainable paddy agriculture	2017	
	34. Nishi-Awa Steep Slope Land Agriculture System	2018	
	35. Traditional WASABI Cultivation in Shizuoka	2018	
Kenya	36. Oldonyonokie/Olkeri Maasai Pastoralist Heritage	2011	
Mexico	37. Chinampas Agricultural System in Mexico City	2017	
Morocco	38. Oases System in Atlas Mountains (Oases of the Maghreb)	2011	
Peru	39. Andean Agriculture	2011	
Philippines	40. Ifugao Rice Terraces	2011	
Portugal	41. Barroso Agro-Sylvo-Pastral System	2018	
Republic of Korea	42. Traditional Gudeuljang Irrigated Rice Terraces in Cheongsando	2014	
	43. Jeju Batdam Agricultural System	2014	
	44. Traditional Hadong Tea Agrosystem in Hwagae-myeon	2017	
	45. Geumsan Traditional Ginseng Agricultural System	2018	
Spain	46. Malaga Raisin Production System in Axarquía	2017	
	47. Salt production system of Añana	2017	
Sri Lanka	48. The Cascaded Tank-Village System in the Dry Zone of Sri Lanka	2017	
Tanzania	49. Engaresero Maasai Pastoralist Heritage Area	2011	
	50. Shimbue Juu Kihamba Agroforestry Heritage Site	2011	
Tunisia	51. Gafsa Oases (Oases of the Maghreb)	2011	
UAE	52. Al Ain and Liwa Historical Date Palm Oases	2015	

**52 sites  
in  
21 countries**

# DIÁLOGO REGIONAL DE ALTO NIVEL

INTEGRAR LA BIODIVERSIDAD  
EN LOS SECTORES AGROPECUARIO, FORESTAL Y PESQUERO

## Case 1: Floating Garden in Bangladesh

- Use invasive plants and other organic material to produce the floating bed-garden
- Multi-crop production and use of the degraded floating bed as fertilizer
- Require low energy input

**Result of adaptation by the farmers to the floods and arable land pressure**

# DIÁLOGO REGIONAL DE ALTO NIVEL

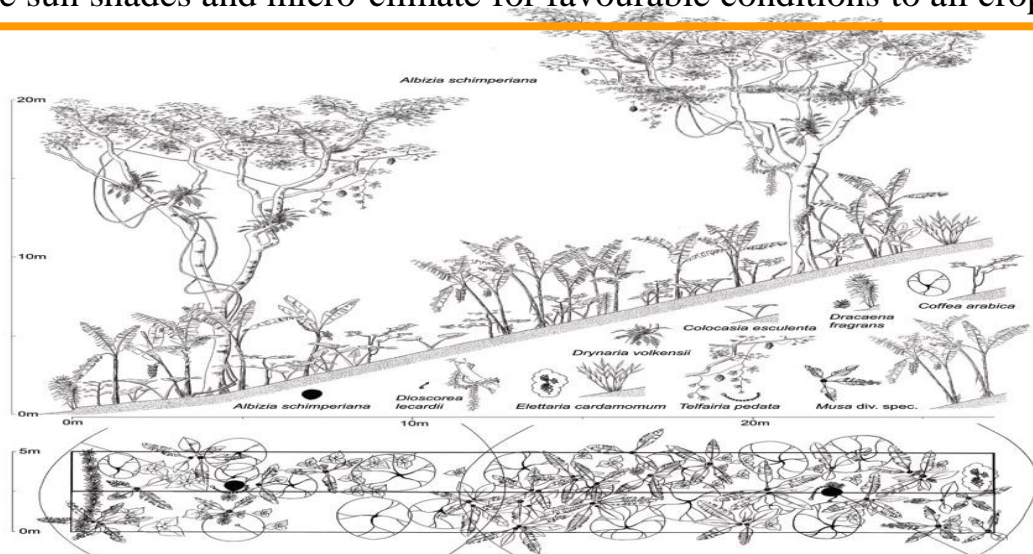

INTEGRAR LA BIODIVERSIDAD  
EN LOS SECTORES AGROPECUARIO, FORESTAL Y PESQUERO

## Case 2: Agroforestry on the slope of Mt. Kilimanjaro

- Mix cropping system featured with several layers of vegetation
  - Endemic timbers, banana, coffee/fruit trees as well as staple crops

Provide sun shades and micro-climate for favourable conditions to all crop production and soil management

Source: Hemp, A., *Biodiverse Conserve* (2006) 15 : "The banana forests of Kilimanjaro Biodiversity and Conservation of the agroforestry system of the Chagga Home garden"

## Case 7: Gout Oases systems in Algeria

- No irrigation system in the desert
- Use of natural wind to create cavities
- Multi-cropped system complying all organic requirements
- Adapted way of life to the Saharian desert

(Cliché F. Lakhdari et al, 2000)

- **High adaption to arid areas with water and sand management**
- **Combatting desertification**

# Case 8: Local Crop Varieties in Chiloe Island (Chile) and Andean Agriculture (Cusco-Puno Corridor, Peru)

- Many endemic varieties of potatoes, garlic and sheep
- Unique Andean crops maintained with traditional technologies

- 
- Farmers' long term efforts for risk reduction against fluctuation of climate conditions
  - Contribution to food security and biodiversity conservation

## III. GIAHS and Agrobiodiversity

# DIÁLOGO REGIONAL DE ALTO NIVEL

INTEGRAR LA BIODIVERSIDAD  
EN LOS SECTORES AGROPECUARIO, FORESTAL Y PESQUERO

## 1. The nature of GIAHS sites from agrobiodiversity

- Many GIAHS sites have valuable local varieties and species.
- Such GIAHS sites have maintained specific cultures, practices and traditional knowledge to promote conservation of local species.

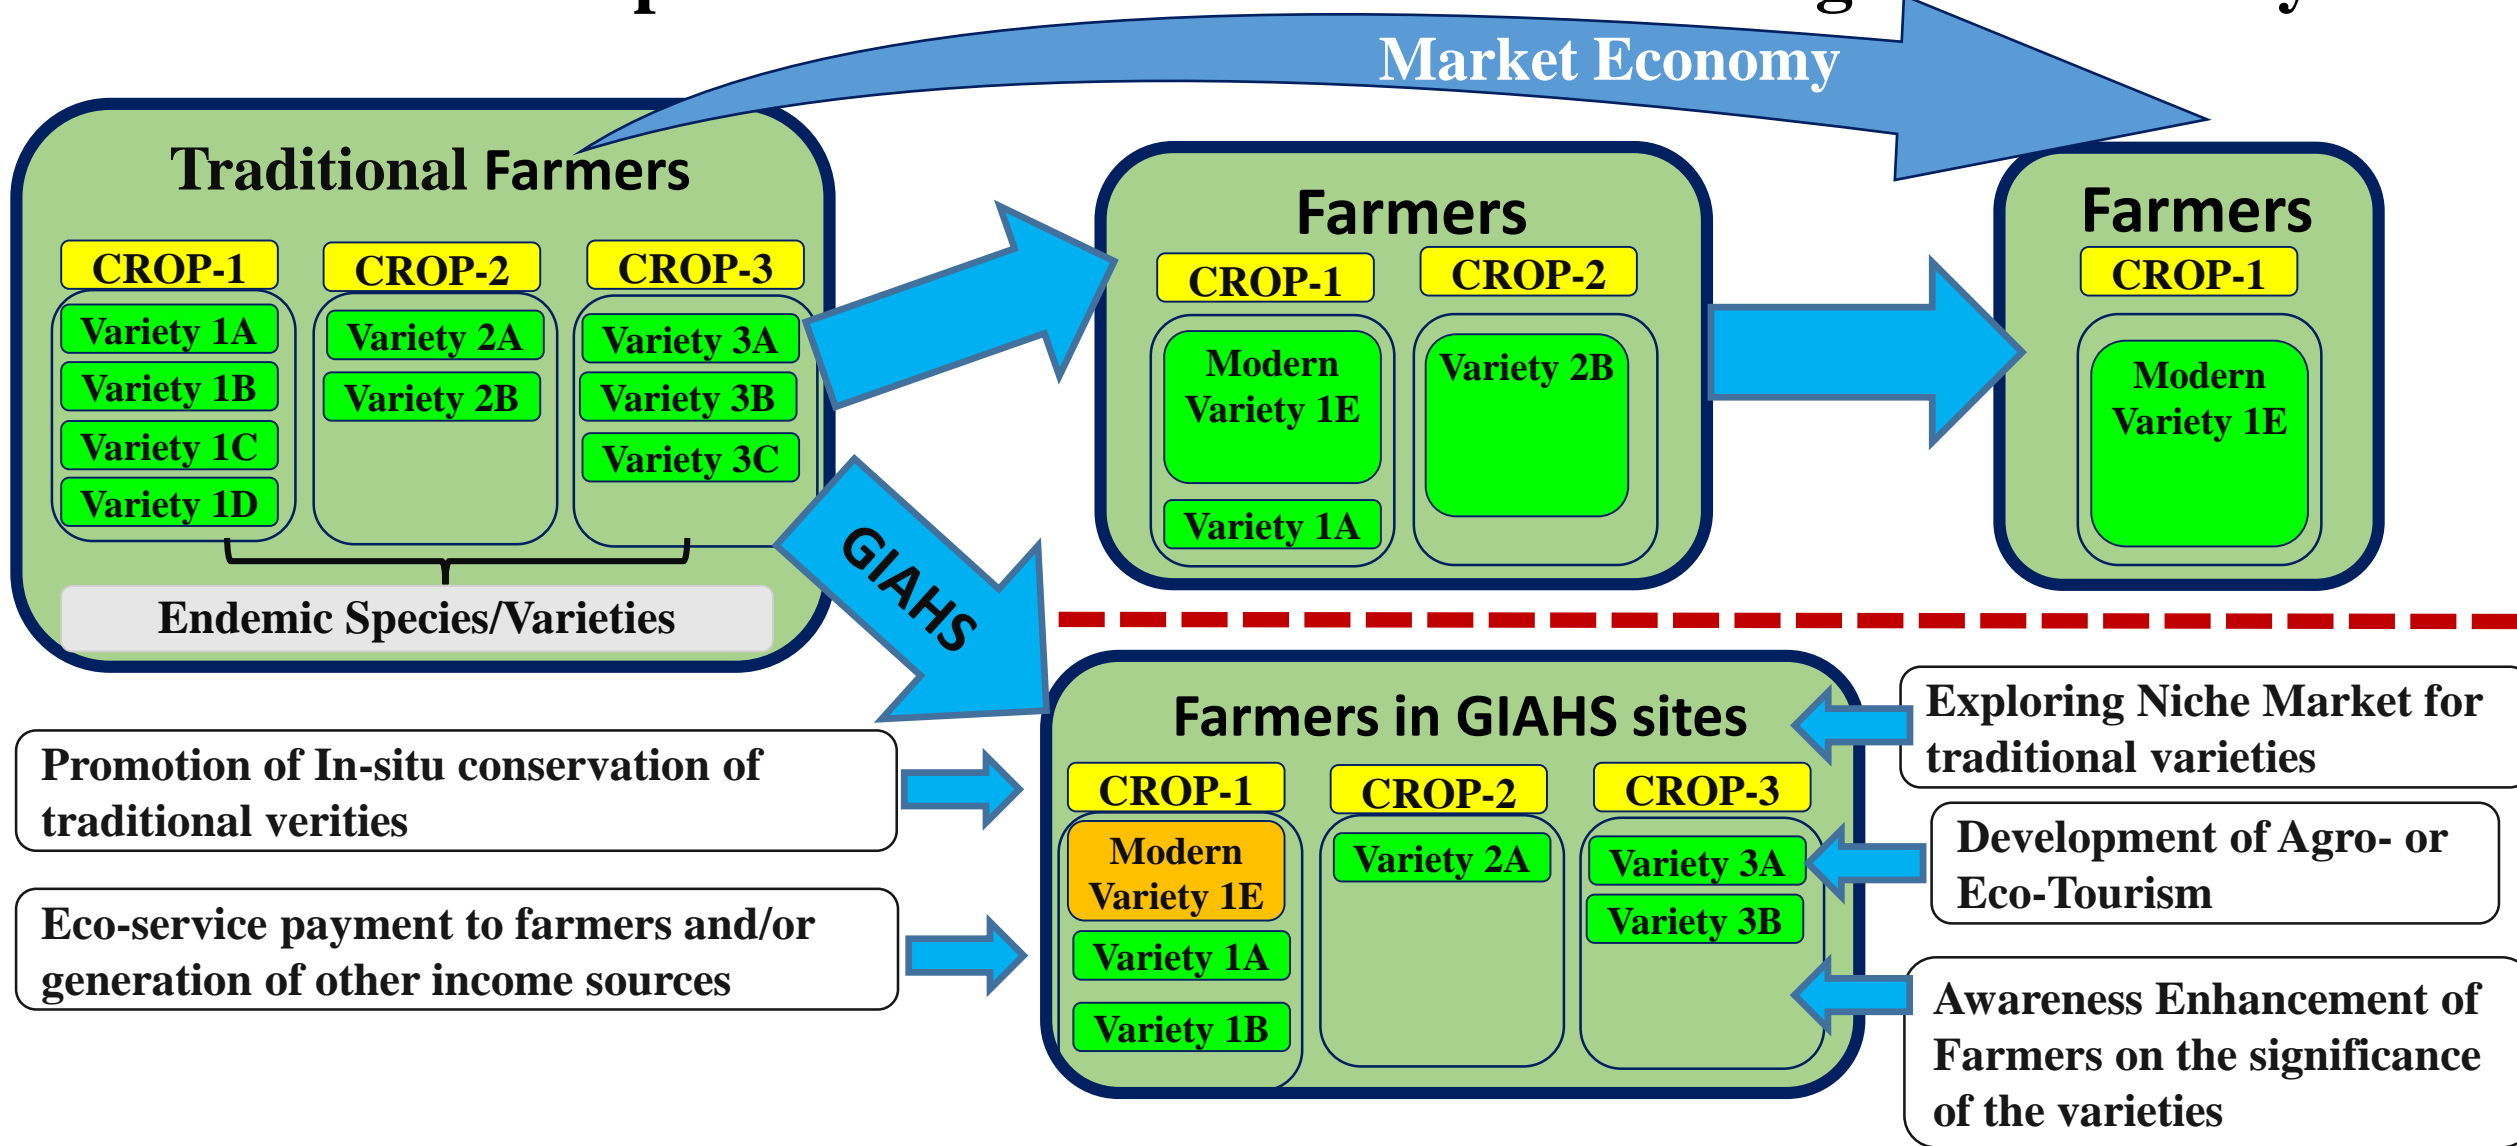

## 2. The effects of implementation of the measures for action plan

- The combination of several actions that are taken for dynamic conservation of the GIAHS site (after such a site is designated as GIAHS) can contribute to conservation of agrobiodiversity.

## **Example of 1 : Specific Practices which have contributed to maintaining agrobiodiversity in Chiloe Islands in Chile (GIAHS site in Chile)**

- Farmers have maintained many local varieties of potatoes for a long time;
- Farmers have many opportunities to exchange seeds of potatoes, together with knowledge such as how to grow them, their specific characteristics;
- Farmers have small home gardens to test new seeds they obtained and make decision to select some varieties for planting in their fields based on this test.
- The criteria for selection of varieties to be planted in the field are not single but multiple, ranging from resilience to diseases/drought, to productivity/quality.
- Female farmers are decision makers as to which types of potatoes should be planted.
- The diversity of potato varieties in the fields itself have been of dynamic nature and ever changing.

# Conceptual Framework of 2: Combination of the measures for Dynamic Conservation have potentials to assist conservation of agrobiodiversity

## Example of 2: Case Study of effective combination of measures for conservation of agrobiodiversity (this is the case of non-GIAHS site)

**Case in Japan; Yamagata Province (Shonai area) where many unique local varieties of vegetables have been produced. The following measures promotes production of local vegetables.**

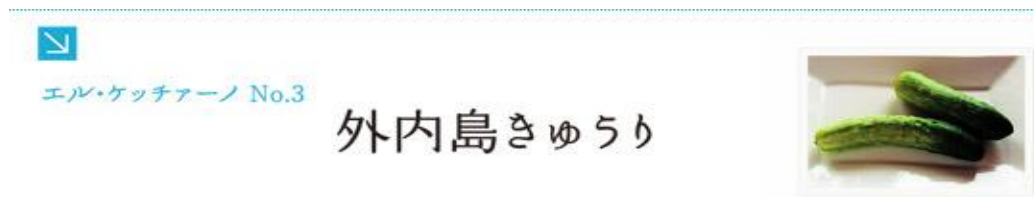

1. A special voluntary group to conserve local varieties was established which organizes many event and research activities.
2. A travel company organizes a study tour on a commercial basis to visit the production site of unique local vegetable to see specific production method (slash and burn) and to enjoy local cuisine using this vegetable.

The Pictures and Information provided by Humming-Tour Corp(Niigata JPN).

3. There is also **educational plans** to let children learn about production of these local vegetables including opportunities to grow and harvest.

4. There is also a **local restaurant** (Italian) where the shef creates unique menu using local varieties of vegetables.

The similar activities can be seen in Chloe islands in Chile and Peru using local varieties of potatoes and Andean cereals such as Quínua.

## Conclusion from these observations

1. In many cases, GIAHS sites have specific local varieties supported by certain traditional practices and knowledge to maintain agrobiodiversity.  
➤ **Maintenance of and strengthening these functions are important.**
2. Combination of several measures for dynamic conservation could contribute to conservation of agrobiodiversity in GIAHS sites.  
➤ **More concrete experiences in GIAHS sites are necessary.**
3. In some cases, this GIAHS approach could be applied to other areas (which are not GIAHS) where unique local varieties have been maintained.
