 <DICTION>\$i\$Capparis spinosa\$/i\$, the caper bush, also called Flinders rose, is a perennial plant that bears rounded, fleshy leaves and large white to pinkish-white flowers. The plant is best known for the edible flower buds (capers), often used as a seasoning, and the fruit (caper berries), both of which are usually consumed pickled. Other species of \$i\$Capparis\$/i\$ are also picked along with \$i\$Capparis spinosa\$/i\$ for their buds or fruits. Other parts of \$i\$Capparis\$/i\$ plants are used in the manufacture of medicines and cosmetics. [https://en.wikipedia.org/wiki/Caper]

 <DICTION>\$i\$Capparis\$/i\$ is a flowering plant genus in the family \$i\$Capparaceae\$/i\$. These plants are shrubs or lianas and are collectively known as caper shrubs or caperbushes. \$i\$Capparis spinosa\$/i\$, simply known as caper, yields fruit and more importantly flower buds, which are widely used pickled as a vegetable condiment. The fruit of other species, such as karir (\$i\$Capparis decudua\$/i\$), are also used for cooking; \$i\$Capparis mitchellii\$/i\$ and the Wild passionfruit (the local subspecies of \$i\$Capparis spinosa\$/i\$) are well-known bush tucker in Australia. Mabinlang seeds (\$i\$Capparis masaikai\$/i\$) are eaten as sweets. [https://en.wikipedia.org/wiki/Capparis]

&lt;SCINAM&gt;Carissa L. [PLANTS CARIS]

<DICTION>Carissa is a genus of about 20-30 species of shrubs or small trees native to tropical and subtropical regions of Africa, Australia and Asia. The fruit are edible but tart, and taste like a giant cranberry and rich in Vitamin C, calcium, magnesium and phosphorus. The fruit of *C. macrocarpa* is especially delicious and is used to make jelly. They are eagerly consumed by birds, which also distribute the seed. If eaten before fully ripe, a bitter, latex-like substance is released from the skin. Other than the fruit, the plant is poisonous. [<http://en.wikipedia.org/wiki/Carissa>]

 <MANSFELD>1080  
 <DICTION>The carrot (*Daucus carota* subsp. *sativus*) is a root vegetable, usually orange, purple, red, white, or yellow in colour, with a crisp texture when fresh. The edible part of a carrot is a taproot. It is a domesticated form of the wild carrot *Daucus carota*, native to Europe and southwestern Asia. It has been bred for its greatly enlarged and more palatable, less woody-textured edible taproot, but is still the same species. [Wikipedia]  
 <DICTION>*Daucus carota* (common names include wild carrot, (UK) bird's nest, bishop's lace, and (US) Queen Anne's lace) is a flowering plant in the family *Apiaceae*, native to temperate regions of Europe, southwest Asia and naturalised to northeast North America; domesticated carrots are cultivars of a subspecies, *Daucus carota* subsp. *sativus*. Like the cultivated carrot, the wild carrot root is edible while young, but quickly becomes too woody to consume. [Wikipedia]

<DICTION>The cashew is a tree in the family *Anacardiaceae*. Its English name derives from the Portuguese name for the fruit of the cashew tree, caju, which in turn derives from the indigenous Tupi name, acajú. It is now widely grown in tropical climates for its cashew nuts and cashew apples. The fruit of the cashew tree is an accessory fruit (sometimes called a pseudocarp or false fruit). What appears to be the fruit is an oval or pear-shaped structure that develops from the pedicel and the receptacle of the cashew flower. Called the cashew apple, better known in Central America as "marañón", it ripens into a yellow and/or red structure about 5 to 11 cm long. It is edible, and has a strong "sweet" smell and a sweet taste. The pulp of the cashew apple is very juicy, but the skin is fragile, making it unsuitable for transport. In Latin America, a fruit drink is made from the cashew apple pulp which has a very refreshing taste and tropical flavor that can be described as having notes of mango, raw green pepper, and just a little hint of grapefruit-like citrus. The true fruit of the cashew tree is a kidney or boxing-glove shaped drupe that grows at the end of the cashew apple. The drupe develops first on the tree, and then the pedicel expands into the cashew apple. Within the true fruit is a single seed, the cashew nut. Although a nut in the culinary sense, in the botanical sense the nut of the cashew is a seed. The seed is surrounded by a double shell containing an allergenic phenolic resin, anacardic acid, a potent skin irritant chemically related to the more well known

allergenic oil urushiol which is also a toxin found in the related poison ivy. Properly roasting cashews destroys the toxin, but it must be done outdoors as the smoke (not unlike that from burning poison ivy) contains urushiol droplets which can cause severe, sometimes life-threatening, reactions by irritating the lungs.[[http://en.wikipedia.org/wiki/Anacardium\\_occidentale](http://en.wikipedia.org/wiki/Anacardium_occidentale)]

 <SCINAM>Cantharellus cibarius Fr., 1821 [INDEX FUNGORUM 200345]  
 <DICTION>The *Cantharellus cibarius*, commonly known as the chanterelle, golden chanterelle or girolle, is a fungus. It is probably the best known species of the genus *Cantharellus*, if not the entire family of *Cantharellaceae*. It is orange or yellow, meaty and funnel-shaped. On the lower surface, underneath the smooth cap, it has gill-like ridges that run almost all the way down its stipe, which tapers down seamlessly from the cap. It emits a fruity aroma, reminiscent of apricots and a mildly peppery taste (hence its German name, Pfifferling) and is considered an excellent edible mushroom.  <DICTION>Salvia hispanica, commonly known as chia, is a species of flowering plant in the mint family, Lamiaceae, native to central and southern Mexico and Guatemala. Chia is grown commercially for its seed, a food that is rich in omega-3 fatty acids. Chia seeds are typically small ovals with a diameter of about 1 mm (0.039 in). They are mottle-colored with brown, gray, black and white. The seeds are hydrophilic, absorbing up to 12 times their weight in liquid when soaked. While soaking, the seeds develop a mucilaginous gel-like coating that gives chia-based beverages a distinctive texture.  <MANSFELD>31967  
 <DICTION>Common chicory, *Cichorium intybus*, is a somewhat woody, perennial herbaceous plant usually with bright blue flowers, rarely white or pink. Various varieties are cultivated for salad leaves, chicons (blanched buds), or for roots (var. *Cichorium sativum*), which are baked, ground, and used as a coffee substitute and additive. It is also grown as a forage crop for livestock. It lives as a wild plant on roadsides in its native Europe, and in North America and Australia, where it has become naturalized. "Chicory" is also the common name in the United States for curly endive (*Cichorium endivia*); these two closely related species are often confused. [<http://en.wikipedia.org/wiki/Chicory>]

BT CITRUS FAMILY [B1139]

AI <DICTION>\$i\$Citrofortunella\$/i\$ according to the Swingle system, is a hybrid genus, containing intergeneric hybrids between members of the genus Citrus and the closely related Fortunella. It is named after its two parent genera. Such hybrids often combine the cold hardiness of the Fortunella, such as the Kumquat, with some edibility properties of the citrus species. Citrofortunellas, which are all hybrids, are marked with the multiplication sign before the word "Citrofortunella", for example × *Citrofortunella microcarpa* or × *Citrofortunella mitis* which refer to the same plant.[[https://en.wikipedia.org/wiki/Citrus\\_taxonomy](https://en.wikipedia.org/wiki/Citrus_taxonomy)]

 <DICTION>The citron (*Citrus medica*) is a large fragrant citrus fruit with a thick rind. It is one of the original citrus fruits from which all other citrus types developed through natural hybrid speciation or artificial hybridization. Though citron cultivars take on a wide variety of physical forms, they are all closely related genetically. It is used widely in Asian cuisine, and also in traditional medicines, perfume, and for religious rituals and offerings. Hybrids of citrons with other citrus are commercially prominent, notably lemons and many limes. [<https://en.wikipedia.org/wiki/Citron>]

<DICTION>Rutaceae, commonly known as the rue or citrus family, is a family of flowering plants, usually placed in the order Sapindales.[<http://en.wikipedia.org/wiki/Rutaceae>]  
 Citrus is a common term and genus (*Citrus*) of flowering plants in the rue family, Rutaceae. Citrus is believed to have originated in the part of Southeast Asia bordered by Northeastern India, Myanmar (Burma) and the Yunnan province of China. Citrus fruit has been cultivated in an ever-widening area since ancient times; the best-known examples are the oranges, lemons, grapefruit, and limes.[<http://en.wikipedia.org/wiki/Citrus>]

**CLASSIFICATION OF FOOD AND FEED COMMODITIES (CODEX ALIMENTARIUS)**

**FTC** A0643

**BT** PRODUCT TYPE, INTERNATIONAL [A0352]

**SN** This term is for CLASSIFICATION ONLY; DO NOT USE term in indexing. Use a more precise narrower term.

**AI** Codex Alimentarius, Volume 2 - 1993, Section 2: Pesticide Residues in Food.

The Codex Classification of food and animal feed commodities moving in trade and the description of the various items and groups of food and animal feedstuffs included in the present document have been developed by the Codex Committee on Pesticide Residues. It was first adopted by the 18th Session of the Codex Alimentarius Commission, (1989).

The Codex Classification includes food commodities and animal feedstuffs for which Codex maximum residue limits will not necessarily be established. The Classification is intended to be as complete a listing of food commodities in trade as possible, classified into groups on the basis of the commodity's similar potential for pesticide residues.

The Classification may also be appropriate for other purposes such as setting maximum levels for other types of residues or for other contaminants in food. The Codex Classification should be consulted in order to obtain a precise description of the food or animal feed commodities and, especially, in cases where Codex maximum residue limits have been set for groups of food and groups of animal feedstuffs. The Codex Classification is intended to promote harmonization of the terms used to describe commodities which are subject to maximum residue limits and of the approach to grouping commodities with similar potential for residue for which a common

group maximum residue limit can be set.

 <DICTION>Collard greens are various loose-leafed cultivars of *Brassica oleracea* (Acephala Group), the same species as cabbage and broccoli. The plant is grown for its large, dark-colored, edible leaves and as a garden ornamental, mainly in Brazil, Portugal, the southern United States, many parts of Africa, Montenegro, Bosnia and Herzegovina, southern Croatia, Spain and in Pakistan, as well as in Kashmir region of both India and Pakistan. They are classified in the same cultivar group as kale and spring greens, to which they are closely similar genetically. The name "collard" is a shortened form of the word "colewort" (cabbage plant).  <SCINAM>Bellis perennis L. [DPNL 2003 7965]  
 <DICTION>\$\$Bellis perennis\$\$ is a common European species of daisy, of the \$\$Asteraceae\$\$ family, often considered the archetypal species of that name. Many related plants also share the name "daisy", so to distinguish this species from other daisies it is sometimes qualified as common daisy, lawn daisy or English daisy. This daisy may be used as a potheb. Flower buds and petals can be eaten raw in sandwiches, soups and salads. It is also used as a tea and as a vitamin supplement. \$\$Bellis perennis\$\$ has astringent properties and has been used in herbal medicine.

 <MANSFELD>24774  
 <DICTION>*Cornus mas* (Cornelian cherry, European cornel or Cornelian cherry dogwood) is a species of flowering plant in the dogwood family *Cornaceae* native to Southern Europe and Southwestern Asia. The fruits when ripe on the plant bear a resemblance to coffee berries, and ripen in mid- to late summer. The fruit is edible (mainly consumed in Eastern Europe, UK, and Iran), but the unripe fruit is astringent. The fruit only fully ripens after it falls from the tree. When ripe, the fruit is dark ruby red or a bright yellow. It has an acidic flavour which is best described as a mixture of cranberry and sour cherry; it is mainly used for making jam, makes an excellent sauce similar to cranberry sauce when pitted and then boiled with sugar and orange, but also can be eaten dried. <MANSFELD>27303  
<DICTION>The cowpea (*Vigna unguiculata*) is an annual herbaceous legume from the genus *Vigna*. Due to its tolerance for sandy soil and low rainfall it is an important crop in the semi-arid regions across Africa and other countries. It requires very few inputs, as the plants root nodules are able to fix atmospheric nitrogen, making it a valuable crop for resource poor farmers and well-suited to intercropping with other crops. The whole plant is used as forage for animals, with its use as cattle feed likely responsible for its name. Four subspecies of cowpea are recognised, of which three are cultivated. Cultivated cowpeas are known by the common names black-eyed pea, southern pea, yardlong bean, catjang, and crowder pea.[<https://en.wikipedia.org/wiki/Cowpea>]

&lt;SCIINFORD&gt;Brachyura [EC No 216/2009 CRA]

&lt;SCIINFORD&gt;Brachyura - undifferentiated [AFNS 2009 28 850000]

<DICTION>Crabs are decapod crustaceans of the infraorder *Brachyura*, which typically have a very short projecting "tail", usually entirely hidden under the thorax. They live in all the world's oceans, in fresh water, and on land, are generally covered with a thick exoskeleton and have a single pair of claws. Many other animals with similar names - such as hermit crabs, king crabs, porcelain crabs, horseshoe crabs, and crab lice - are not true crabs. Crabs are generally covered with a thick exoskeleton, composed primarily of highly mineralized chitin, and armed with a single pair of chelae (claws). Crabs are found in all of the world's oceans, while many crabs live in fresh water and on land, particularly in tropical regions. [<https://en.wikipedia.org/wiki/Crab>]

AI &lt;SCISUPFAM&gt;Astacoidea Latreille, 1802 [ITIS 97306]

<DICTION>Crayfish, often referred to as crawfish or crawdad, are freshwater crustaceans resembling small lobsters, to which they are closely related. They are found in bodies of fresh water that do not freeze to the bottom, and which have shelter against predators. Most crayfish cannot tolerate polluted water, although some species such as the invasive *Procambarus clarkii* are more hardy. Some crayfish have been found living as much as 3 m (10 feet) underground.

There are three families of crayfish, two in the Northern Hemisphere and one in the Southern Hemisphere. The Southern Hemisphere family *Parastacidae* lives in South America, Madagascar and Australasia, and is distinguished by the lack of the first pair of pleopods. Of the other two families, members of the *Astacidae* live in western Eurasia and western North America and members of the family *Cambaridae* live in eastern Asia and eastern North America. BT CHEESE (EUROFIR) [A0784]

RT CURED CHEESE (US CFR) [A0168]

UF ripened cheese

SN Cheeses are classified here according to their consistency (Codex Alimentarius Standard). Cheeses can be further distinguished according to fat content and rind type in facet Z.

AI Ripened cheese is cheese which is not ready for consumption shortly after manufacture but which must be held for such time, at such temperature, and under such other conditions as will result in the necessary biochemical and physical changes characterizing the cheese in question. (CODEX STAN A-6-1978, Rev.1-1999, Amended 2003). The group includes cheeses that are normally consumed cured but may be sold in an uncured or very lightly cured stage.

**CURED CHEESE (US CFR)**

FTC A0168

BT NATURAL CHEESE (US CFR) [A0187]

- RT** CURED CHEESE (EUROFIR) [A0785]  
**UF** cheese, cured  
**AI** Natural cheese that is cured; includes cheeses that are normally consumed cured but may be sold in an uncured or very lightly cured stage. The classification of cured cheeses is based on the method of curing, the moisture content, and the milk fat content measured as the proportion of solids. Scope notes given for the general classes give moisture and milkfat proportions that cover the entire range specified in the CFR for the individual cheeses included in a class; the class definition given in the CFR section cited may be more restrictive.

 BT FISH [B1222]  
 AI <DICTION>Diadromous fish travel between salt and fresh water. Anadromous fish live in the sea mostly, breed in fresh water; the best-known are salmon, which hatch in small freshwater streams, go down to the sea and live there for several years, then return to the same streams where they were hatched, spawn, and die shortly thereafter. Salmon are capable of going hundreds of kilometers upriver, and humans must install fish ladders in dams to

enable the salmon to get past. Catadromous fish live in fresh water, breed in the sea; the most remarkable are freshwater eels of genus *Anguilla*, whose larvae drift on the open ocean, sometimes for months or years, before travelling thousands of kilometres back to their original streams. Amphidromous fish move between fresh and salt water during some part of life cycle, but not for breeding. **AI** Index dietary/food supplements according to legal and market definitions.

The United States defines dietary supplements in the Dietary Supplement Health and Education Act of 1994

(DSHEA). Pub L 103-417, 108 STAT. 4235, (Oct. 25, 1994): A dietary supplement is a product taken by mouth that contains a "dietary ingredient" intended to supplement the diet. The "dietary ingredients" in these products may include: vitamins, minerals, herbs or other botanicals, amino acids, and substances such as enzymes, organ tissues, glandulars, and metabolites. Dietary supplements can also be extracts or concentrates, and may be found in many forms such as tablets, capsules, softgels, gelscaps, liquids, or powders.

In the European Union, food supplements are framed by two kinds of regulations:

- the EU vertical regulation relating to food supplements, composed with the directive 2002/46/CE (essentially for the definition of food supplements) and the regulation 1170/2009 (which lists the vitamins and minerals, and the chemical forms of the substances allowed in food supplements);
- the EU transversal regulation relating to foodstuffs and especially the 2006/1924 regulation concerning nutrition and health claims, and the EU labeling transversal regulations, 90/496/EC and 2008/100/EC.

The EU regulation 2002/46/CE defines food supplements as "foodstuffs the purpose of which is to supplement the normal diet and which are concentrated sources of nutrients or other substances with a nutritional or physiological effect, alone or in combination, marketed in dose form, namely forms such as capsules, pastilles, tablets, pills and other similar forms, sachets of powder, ampoules of liquids, drop dispensing bottles, and other similar forms of liquids and powders designed to be taken in measured small unit quantities". [Directive 2002/46/EC]

Codex Alimentarius also includes supplements containing vitamins or dietary minerals  
[[http://www.codexalimentarius.net/download/standards/10206/cxg\\_055e.pdf](http://www.codexalimentarius.net/download/standards/10206/cxg_055e.pdf)]

#### DIETARY SUPPLEMENT, ELECTROLYTE

- FTC A1327  
BT DIETARY SUPPLEMENT, OTHER [A1326]  
AI Electrolyte supplements are a varied group of prescription and nonprescription preparations used to correct imbalances in the body's electrolyte levels. Electrolyte supplements are intended to prevent or treat electrolyte imbalances in very different situations or groups of patients. They range from sports drinks and other supplements used by amateur or professional athletes to prevent muscle cramps and improve athletic performance, to liquids used at home to prevent dehydration in children with diarrhea, to injections administered as part of enteral (feeding through a tube or stoma directly into the small intestine) or parenteral nutrition (intravenous feeding that bypasses the digestive tract). [<http://medical-dictionary.thefreedictionary.com/Electrolyte+Supplements>]

#### DIETARY SUPPLEMENT, FIBRE

- FTC A1328

- BT** DIETARY SUPPLEMENT, OTHER [A1326]  
**UF** fibre supplement  
**AI** Fibre supplements (or fiber supplements) are considered to be a form of a subgroup of functional dietary fibre, and in the United States are defined by the Institute of Medicine (IOM). According to the IOM, functional fibre "consists of isolated, non-digestible carbohydrates that have beneficial physiological effects in humans".  
 Fibre supplements are widely available, and can be found in forms such as powders, tablets and capsules.  
 Consumption of fibre supplements may be for: improving dietary intake, lowering blood cholesterol, alleviating irritable bowel syndrome, reducing the risk of colon cancer, and increasing feelings of satiety.  
[\[http://en.wikipedia.org/wiki/Fibre\\_supplements\]](http://en.wikipedia.org/wiki/Fibre_supplements)

 <SCIFAM>Delphinidae [CEC 1993 1445]  
 <SCIFAM>Delphinidae Gray, 1821 [MSW3 14300035]  
 <DICTION>Dolphins are aquatic mammals related to whales and porpoises... Any member of the families *Delphinidae* and *Platanistoidea* (oceanic and river dolphins). Porpoises (suborder *Odontoceti*, family *Phocoenidae*) are thus not dolphins in this sense. Orcas and some related species belong to the *Delphinidae* family and therefore qualify as dolphins, even though they are called whales in common language. There are almost 40 species of dolphin in 17 genera. They vary in size from 1.2 m (4 ft) and 40 kg (88 lb) (Maui's Dolphin), up to 9.5 m (30 ft) and 10 tonnes (the Orca). However, the average length for most North American Species is 13.89 feet in length. Most species weigh about 50 to 200 kg (110 to 440 lb). They are found worldwide, mostly in the shallower seas of the continental shelves, and are carnivores, mostly eating fish and squid. Bottlenose Dolphin is the most common and familiar species of dolphin.

FTC G0043  
 BT BOILED [G0014]  
 UF double boiling  
 AI Double steaming, also called double boiling, is a Chinese cooking technique to prepare delicate food such as bird nests, shark fins, etc. The food is covered with water and put in a covered ceramic jar and the jar is then steamed

for several hours. This technique ensures there is no loss of liquid or moisture (its essences) from the food being cooked, hence it is often used with expensive ingredients like Chinese herbal medicines. [Wikipedia]

**EFSA FOOD CLASSIFICATION AND DESCRIPTION SYSTEM FOR EXPOSURE ASSESSMENT (EFSA FOODEx2)**

**FTC** A1895  
**BT** PRODUCT TYPE, EUROPEAN UNION [A0356]  
**SN** This term is for CLASSIFICATION ONLY; DO NOT USE term in indexing. Use a more precise narrower term.  
**AI** <DICTION>FoodEx2 is a comprehensive food classification and description system aimed at covering the need to describe food in data collections across different food safety domains. After its first release in 2011, the system was broadly tested in various practical situations, allowing its evaluation and the identification of areas for improvement.  
 The present version in LanguaL is based on the FoodEx2 version Matrix 9.0 dated 2018-01-26 (downloaded 2018-02-07) and comprises the FoodEx2 Exposure Hierarchy. The FoodEx2 browser and FoodEx2 catalogue are available at GitHub: <https://github.com/openefsa/catalogue-browser/wiki>  
 For further information, see the Data Standardisation pages of the European Food Safety Authority website [<https://www.efsa.europa.eu/en/data/data-standardisation>].  
 The implementation of EFSA FoodEx2 facet term codes (FTC) in LanguaL follow closely the EFSA FoodEx2 codes; this means that the LanguaL facet term codes for all FoodEx2 descriptors are identical to the original EFSA FoodEx2 codes.  
 EFSA FoodEx2 is top-down prioritised, meaning that descriptors physically higher in the hierarchy within the same level are preferred to descriptors further down, whereas LanguaL in general does not have a preferred order. In the implementation of EFSA FoodEx2 it has therefore been necessary to implement a forced order of the descriptors by preceding the original FoodEx2 descriptor names by a numeric serialisation indicators (an order number).

 <DICTION>\$\$Rubus ulmifolius\$/i\$ is a species of wild blackberry known by the English common name elmleaf blackberry or thornless blackberry and the Spanish common name zarzamora. It is native to Europe and North Africa, and it is widely known elsewhere as an introduced species and sometimes a noxious weed. It is a brambly shrub with compound leaves and small, white or pink flowers. The fruit is a blackberry.[http://en.wikipedia.org/wiki/Rubus\_ulmifolius]

UF micro-encapsulated

SN Used for the coating of microscopic particles with another material.

AI Micro-encapsulation is a process in which tiny particles or droplets are surrounded by a coating to give small capsules many useful properties. In a relatively simplistic form, a microcapsule is a small sphere with a uniform wall around it. The material inside the microcapsule is referred to as the core, internal phase, or fill, whereas the wall is sometimes called a shell, coating, or membrane. Most microcapsules have diameters between a few micrometers and a few millimeters.

The definition has been expanded, and includes most foods. Every class of food ingredient has been encapsulated; flavors are the most common. The technique of microencapsulation depends on the physical and chemical properties of the material to be encapsulated.[<http://en.wikipedia.org/wiki/Micro-encapsulation>]

AI Ethnic food is food from countries other than the home market contributing to a different food culture than the traditional cuisine of the host country. [Ethnic Groups and Foods in Europe, EuroFIR Synthesis report No 3, 2005]

"Ethnic food" has been used colloquially for a wide variety of foodstuffs, virtually any that can be identified in the public mind with a foreign source or an ethnic minority group. In the narrower ethnographic meaning, it pertains only to food prepared or consumed by members of an ethnic group as a manifestation of its ethnicity. In the end ethnic food is food that members of an ethnic group consider their own and that others attribute to them. [<http://www.answers.com/topic/ethnic-cuisines>]

UF kappaphycus alvarezii

AI &lt;SCITRI&gt;Eucheumatoideae

<DICTION>Eucheuma is a general term used to describe a group of red seaweeds/seaplants representing the Tribe *Eucheumatoideae*, used in the production of Carrageenan, an important product used in cosmetics, food processing and industrial uses, as well as a food source for those living in Indonesia and the Philippines. Some of the most significant species include *Betaphycus gelatinae*, *Eucheuma denticulatum*, and several species of the genus *Kappaphycus* including *Kappaphycus alvarezii*. Since the mid-1970's *Kappaphycus* and *Eucheuma* have been the major source for the expansion of the carrageenan industry. [<http://en.wikipedia.org/wiki/Eucheuma>]

**EUROPEAN FOOD GROUPS (EFG)**

FTC A0690  
 BT PRODUCT TYPE, EUROPEAN UNION [A0356]

SN This term is for CLASSIFICATION ONLY; DO NOT USE term in indexing. Use a more precise narrower term.

- AI** The European Food Groups (EFG) classification system was developed, as a project of COST Action 99/Eurofoods, in an attempt to evaluate the level of food description and classification that would permit international comparisons of the results of available food consumption and food availability surveys. In order to formulate the EFG system, several classification schemes used for recording food intake at the international and national classification schemes were compared: International - FAO Food Balance Sheet, WHO GEMS/FOODS regional diets, DAFNE classification system for Household Budget Survey (HBS) data, and Eurocode 2 core classification (levels 1 and 2); National - French National Food Consumption Survey (1999), Dutch National Food Consumption Survey (1998), and British National Food Survey.
- In the process of comparing food intake data from various European countries, it became evident that such comparisons are feasible only when results are expressed at the raw ingredient level. Since the DAFNE classification system groups food items at the raw level, it was one of the international classification schemes used to create the EFG food grouping system.
- Ref.: Ireland, J., Van Erp-Baart, A.M.J., Charrondière, U.R., Møller, A., Smithers, G., and Trichopoulou, A.: Selection of food classification system and food composition database for future food consumption surveys. European Journal of Clinical Nutrition, 56, Suppl. 2, S33 - S45, 2002.

 <DICTION>Pennyroyal refers to two plants in the mint family, *Lamiaceae*. The European pennyroyal, *Mentha pulegium*, (also called Squaw Mint, Mosquito Plant, and Pudding Grass), is a plant in the mint genus, within the family *Lamiaceae*. Crushed Pennyroyal leaves exhibit a very strong fragrance similar to spearmint. Pennyroyal is a traditional culinary herb, folk remedy, and abortifacient. The essential oil of pennyroyal is used in aromatherapy, and is also high in pulegone, a highly toxic volatile organic compound affecting liver and uterine function.

<DICTION>\$iExocarpos\$/i\$ is a genus of flowering shrubs and small trees in the sandalwood family, \$iSantalaceae\$/i\$. They are found throughout Southeast Asia, Australia and the Pacific Islands. They are semi-parasitic, requiring the roots of a host tree, a trait they share with many other members of the Santalaceae. In Australia, they are known as ballarts, and several species are known as cherries.

Maximum moisture content 36%, minimum fat content in dry matter 32% (CODEX STAN C-35-1978).

Examples include parmesan, pecorino, romano cheese.

**EXTRACT, CONCENTRATE OR ISOLATE OF PLANT OR ANIMAL**

FTC C0228

BT C. PART OF PLANT OR ANIMAL [C0116]

AI A physical-chemical component separated from the food source or its parts by extraction, centrifugation, filtration, heat processing, expressing or a similar process. The separated component may be converted through further

processing. If this is done, the final substance is indexed. A water-extracted component may remain in aqueous dispersion. The extract, concentrate or isolate is indexed in preference to the anatomic part from which it is derived. For example, peanut oil is indexed under \*PEANUT\* combined with \*FAT OR OIL\* rather than with \*SEED OR KERNEL\*. On the other hand, fruit and vegetable juices can be indexed under \*FRUIT JUICE OR NECTAR\* or \*VEGETABLE JUICE\* (A. PRODUCT TYPE); therefore the anatomic part of the plant should be indexed.

**UF** cultured milk product  
**AI** Fermented milk is a milk product obtained by fermentation of milk, which milk may have been manufactured from products obtained from milk with or without compositional modification as limited by the provision in Section 3.3, by the action of suitable microorganisms and resulting in reduction of pH with or without coagulation (CODEX STAN 243-2003). Fermented milk products include a range of foods commonly referred to as yogurt (or yoghurt), plus sour milk drinks produced by fermentation. A few of these are alcoholic as they are made with combined lactic and yeast ferments (e.g. kefir, koumiss); others are lactic fermented milk products (e.g. cieddu, kaeder milk, skyr, taette). In some traditional fermented milk products, such as Stragisto (strained yoghurt), Labneh, Ymer and Ylette, Milk the protein has been increased to minimum 5.6%.

**UF** fiddlehead  
**AI** <DICTION> A fern is a member of a group of vascular plants that reproduce via spores and have neither seeds nor flowers. They differ from mosses by being vascular, i.e., having certain tissue that conducts water and nutrients, and having branched stems. Ferns are defined here in the broad sense, being all of the Polypodiopsida, comprising both the leptosporangiate (*Polypodiidae*) and eusporangiate ferns, the latter itself comprising "ferns" other than those denominated "true ferns": horsetails (including scouring rushes), whisk ferns, marattioid ferns, and ophioglossoid ferns.  
 Ferns are not as important economically as seed plants but have considerable importance in some societies. Some ferns are used for food, including the fiddleheads of *Pteridium aquilinum* (bracken), *Matteuccia struthiopteris* (ostrich fern), and *Osmundastrum cinnamomeum* (cinnamon fern).

RT 50182000 - SWEET BAKERY PRODUCTS (GS1 GPC) [A0951]  
RT 1800 BAKED PRODUCTS (USDA SR) [A1288]  
AI Products in the \*BREAD\* category normally have contents of sugars and fat neither exceeding 5% on a dry weight basis. Bakery products exceeding either of these limits are termed "Fine bakery ware". Savoury fine bakery wares will tend to be higher in fat and sweet products in sugars. However, some products, for example scones, may be considered savoury or sweet. Therefore, all of these products are categorised as "Fine bakery wares", rather than using separate categories for savoury and sweet products. Some examples are: biscuits, cookies, dry pastry (e.g. savoury biscuits, sweet biscuits and cookies); sweet breads (e.g. croissants, currant bun, dough cakes like muffins or brioche, scone, doughnut); pastry (e.g. danish pastry, baclava); tart, pie (e.g. custard tart, mince pie); cakes (e.g. fruit cake, cream cake, sponge cake).

AI Foods for Special Dietary Uses are those foods that are specially processed or formulated to satisfy particular dietary requirements that exist because of a particular physical or physiological condition and/or specific diseases and disorders and that are presented as such. The composition of these foodstuffs must differ significantly from the

composition of ordinary foods of comparable nature, if such ordinary foods exist (CODEX STAN 146-1985). The product may be used as the sole or major source of nourishment. It is frequently offered in a form convenient to use. The group includes infant formula, products designed for weight loss, instant breakfast, energy food stick, interal and parenteral complete nutrition solutions, etc.

 AI <SCIORDE>Anura [ITIS 173423]  
 <DICTION>A frog is any member of a diverse and largely carnivorous group of short-bodied, tailless amphibians composing the order *Anura*. The use of the common names "frog" and "toad" has no taxonomic justification. From a classification perspective, all members of the order *Anura* are frogs, but only members of the family *Bufonidae* are considered "true toads". The use of the term "frog" in common names usually refers to species that are aquatic or semi-aquatic and have smooth, moist skins; the term "toad" generally refers to species that are terrestrial with dry, warty skins. <SCINAM>Benincasa hispida (Thunb.) Cogn. [DPNL 2003 7970]

<DICTION>The winter melon, also called ash gourd, white gourd, wax gourd, winter gourd, tallow gourd, ash

pumpkin, and Chinese preserving melon is a vine grown for its very large fruit, eaten as a vegetable when mature.

It is the only member of the genus *Benincasa*. The fruit is fuzzy when young. The immature melon has thick white flesh that is sweet when eaten. By maturity, the fruit loses its hairs and develops a waxy coating, giving rise to the name wax gourd, and providing a long shelf life.[[https://en.wikipedia.org/wiki/Winter\\_melon](https://en.wikipedia.org/wiki/Winter_melon)]

 <DICTION>The grapefruit (*Citrus x paradisi*) is a subtropical citrus tree known for its sour to semi-sweet, somewhat bitter fruit. Grapefruit is a hybrid originating in Barbados as an accidental cross between two introduced species, sweet orange (*C. sinensis*) and pomelo or shaddock (*C. maxima*), both of which were introduced from Asia in the seventeenth century. When found, it was named the "forbidden fruit"; and frequently, it has been misidentified with the pomelo. The grapefruit's name alludes to clusters of the fruit on the tree, which often appear similar to that of grapes. [<https://en.wikipedia.org/wiki/Grapefruit>]

 <DICTION>\$i\$Guarea\$/i\$ is a genus of evergreen trees in the mahogany family \$i\$Meliaceae\$/i\$, native to tropical Africa and Central and South America. They are large trees 20-45 m tall, with a trunk over 1 m trunk diameter, often buttressed at the base. The leaves are pinnate, with 4-6 pairs of leaflets, the terminal leaflet present. The flowers are produced in loose inflorescences, each flower small, with 4-5 yellowish petals. The fruit is a four or five-valved capsule, containing several seeds, each surrounded by a yellow-orange fleshy aril; the seeds are dispersed by hornbills and monkeys which eat the fleshy aril.[<http://en.wikipedia.org/wiki/Guarea>]

**HEALTH-RELATED CLAIM OR USE**

FTC P0124

BT DIETARY CLAIM OR USE [P0023]

SN Used for any claim that states, suggests or implies that a relationship exists between a food category, a food or one of its components and health.

AI Health claim means any claim made on the label or in labeling of a food, including a dietary supplement, that expressly or by implication, including "third party" references, written statements (e.g., a brand name including a term such as "heart"), symbols (e.g., a heart symbol), or vignettes, characterizes the relationship of any substance to a disease or health-related condition. See also 21 CFR 101.14  
[<http://www.accessdata.fda.gov/scripts/cdrh/cfdocs/cfcfr/CFRSearch.cfm?fr=101.14>].

A claim is a health claim if in the naming of the substance or category of substances, there is a description or indication of a functionality or an implied effect on health; examples: "contains antioxidants" (the function is an antioxidant effect); "contains probiotics/prebiotics" (the reference to probiotic/prebiotic implies a health benefit). Equally, claims which refer to an indication of a functionality in the description of a nutrient or a substance (for instance as an adjective to the substance) should also be classified as a health claim; examples: "with prebiotic fibres" or "contains prebiotic fibres".

In Europe, a health claim is any statement about a relationship between food and health [[http://ec.europa.eu/food/food/labellingnutrition/claims/health\\_claims\\_en.htm](http://ec.europa.eu/food/food/labellingnutrition/claims/health_claims_en.htm)], and only authorized health claims are legal [see [http://ec.europa.eu/food/food/labellingnutrition/claims/community\\_register/health\\_claims\\_en.htm](http://ec.europa.eu/food/food/labellingnutrition/claims/community_register/health_claims_en.htm)]. COMMISSION REGULATION (EU) No 432/2012 of 16 May 2012 establishes a list of permitted health claims made on foods, other than those referring to the reduction of disease risk and to children's development and health [<http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:136:0001:0040:en:PDF>]

BT SUGAR SYRUP OR SYRUP SOLIDS [C0271]

#### HIGH MONOUNSATURATED FAT

FTC P0243  
BT MONOUNSATURATED FAT CLAIM OR USE [P0241]  
AI A claim that a food is high in monounsaturated fat, and any claim likely to have the same meaning for the consumer, may only be made where at least 45 % of the fatty acids present in the product derive from monounsaturated fat under the condition that monounsaturated fat provides more than 20 % of energy of the product [COMMISSION REGULATION (EU) No 116/2010 of 9 February 2010 amending Regulation (EC) No 1924/2006 of the European Parliament and of the Council with regard to the list of nutrition claims].

#### HIGH OMEGA-3 FATTY ACIDS

FTC P0245  
BT OMEGA-3 FATTY ACIDS CLAIM OR USE [P0244]  
AI A claim that a food is high in omega-3 fatty acids, and any claim likely to have the same meaning for the consumer, may only be made where the product contains at least 0,6 g alpha-linolenic acid per 100 g and per 100 kcal, or at least 80 mg of the sum of eicosapentaenoic acid and docosahexaenoic acid per 100 g and per 100 kcal [COMMISSION REGULATION (EU) No 116/2010 of 9 February 2010 amending Regulation (EC) No 1924/2006 of the European Parliament and of the Council with regard to the list of nutrition claims].

#### HIGH POLYUNSATURATED FAT

FTC P0246  
BT POLYUNSATURATED FAT CLAIM OR USE [P0242]  
AI A claim that a food is high in polyunsaturated fat, and any claim likely to have the same meaning for the consumer, may only be made where at least 45 % of the fatty acids present in the product derive from polyunsaturated fat under the condition that polyunsaturated fat provides more than 20 % of energy of the product [COMMISSION REGULATION (EU) No 116/2010 of 9 February 2010 amending Regulation (EC) No 1924/2006 of the European Parliament and of the Council with regard to the list of nutrition claims].

#### HIGH PROTEIN FOOD

FTC P0203  
BT PROTEIN SPECIAL CLAIM OR USE [P0202]  
AI A claim that a food is high in protein, and any claim likely to have the same meaning for the consumer, may only be made where at least 20 % of the energy value of the food is provided by protein [REGULATION (EC) No 1924/2006 Corrigendum 2007-01-18].

#### HIGH TEMPERATURE SHORT TIME (HTST) PASTEURIZATION

FTC J0178  
BT PASTEURIZED BY HEAT [J0135]  
UF htst  
AI High Temperature Short Time (HTST) pasteurization is one of the most common methods of pasteurization, which uses metal plates and hot water to raise milk temperatures to at least 72° C (161° F) for not less than 15 seconds, followed by rapid cooling.

#### HIGH UNSATURATED FAT

FTC P0248  
BT UNSATURATED FAT CLAIM OR USE [P0247]  
AI A claim that a food is high in unsaturated fat, and any claim likely to have the same meaning for the consumer may only be made where at least 70 % of the fatty acids present in the product derive from unsaturated fat under the condition that unsaturated fat provides more than 20 % of energy of the product [COMMISSION REGULATION (EU) No 116/2010 of 9 February 2010 amending Regulation (EC) No 1924/2006 of the European Parliament and of the Council with regard to the list of nutrition claims].

AI <DICTION>Huckleberry is a name used in North America for several plants in two closely related genera in the family *Ericaceae*: *Gaylussacia* and *Vaccinium*. While some *Vaccinium* species, such as the Red Huckleberry, are always called huckleberries, other species may be called blueberries or huckleberries depending upon local custom. Similar *Vaccinium* species in Europe are called bilberries. Berries range in color according to species from bright red, through dark purple, and into the blues. In taste the berries range from tart to sweet, with a flavor similar to that of a blueberry, especially in blue/purple colored varieties. [Wikipedia : <http://en.wikipedia.org/wiki/Huckleberries>]

**INGREDIENT ADDED**

FTC H0225

BT H. TREATMENT APPLIED [H0111]

AI A food product is characterized by its main ingredient (food source and part); the addition of secondary ingredients is considered a treatment applied to the product. Secondary ingredients are indexed according to rules that are based on the order of predominance by weight (not counting water) as seen from the label statement, formulation or recipe and/or from the amount of the ingredient as percentage of total product weight. The general rule is: an ingredient is always indexed if it is the second ingredient in order of predominance, if it is used as a filling, or if it is part of the product name (e.g., raisin bread). Specific rules are given in the scope note for the individual ingredient added; these rules specify more exhaustive indexing. For example, \*MUSHROOM ADDED\* is indexed regardless of ingredient position. another specific rule is given in the scope note for \*SALTED\*: Use if the level of salt is more than 4%. Such a rule is used only when the percentage level can be inferred from the list of ingredients.

AI <SCINAM>Insecta [ITIS 99208]

<DICTION>Insects or Insecta are by far the largest group of hexapod invertebrates within the arthropod phylum. Insects have a chitinous exoskeleton, a three-part body (head, thorax and abdomen), three pairs of jointed legs, compound eyes and one pair of antennae. They are the most diverse group of animals on the planet, including more than a million described species and representing more than half of all known living organisms.

 <SCINAM>Senna obtusifolia (L.) Irwin & Barneby [PLANTS SEOB4]  
 <DICTION>\$\$Senna obtusifolia \$/i\$(Chinese senna, American sicklepod or sicklepod) is a legume in the genus Senna, sometimes separated in the monotypic genus Diallobus. It grows wild in North, Central, and South America, Asia, Africa, and Oceania, and is considered a particularly serious weed in many places. \$br/\$ The green leaves of the plant are fermented to produce a high-protein food product called "kawa" which is eaten by many people in Sudan as a meat substitute. \$br/\$ The plant's seeds are a commercial source of cassia gum, a food additive usually used as a thickener and named for the Chinese Senna's former placement in the genus Cassia. Roasted and ground, the seeds have also been used as a substitute for coffee.

<DICTION>Kale (also called Borecole) is a form of cabbage (*Brassica oleracea* Acephala Group) in which the central leaves do not form a head. It is considered to be closer to wild cabbage than most domesticated forms. The species *Brassica oleracea* contains a wide array of vegetables, including broccoli, cauliflower, and Brussels sprouts. The Cultivar Group Acephala also includes spring greens and collard greens, which are extremely similar genetically. Kale can be classified by leaf type: Curly leaved (Scots kales), Plain leaved, Rape kale, Leaf and spear (a cross between curly leaved and plain leaved kale), Cavolo nero (also known as black cabbage, Tuscan kale, Lacinato and dinosaur kale) (<http://en.wikipedia.org/wiki/Kale>)

 <DICTION>The King George whiting, *Sillaginodes punctatus* (also known as the spotted whiting or spotted sillago), is a coastal marine fish of the smelt-whitings family Sillaginidae. The King George whiting is endemic to Australia, inhabiting the south coast of the country from Jurien Bay, Western Australia to Botany Bay, New South Wales in the east. The King George whiting is the only member of the genus *Sillaginodes* and the largest member of the smelt-whiting family Sillaginidae, growing to a length of 72 cm and 4.8 kg in weight. The species is readily distinguishable from other Australian whittings by its unique pattern of spots, as well as its highly elongate shape. King George whiting are often found in bays and protected waterways over sand and seagrass beds, also venturing out onto deep continental shelf reefs during adulthood. The species is a benthic carnivore, consuming a variety of crustaceans, polychaete worms, molluscs and fish. The King George whiting forms the basis of one of southern Australia's most important commercial fisheries, reportedly worth over five million Australian dollars per year. The species is also heavily targeted by recreational anglers, who value the whiting for its sporting and eating qualities. &lt;DICTION&gt;\$\$Actinidia deliciosa\$/i\$, fuzzy kiwifruit or mangüeyo is a fruiting vine native to southern China, the fruit of which has been declared the national fruit of that country. Other species of Actinidia are also found in China and range east to Japan and north into southeastern Siberia. This species grows naturally at altitudes between 600 and 2,000 m.\$br/\$

The oblong fruits are up to 6.25 cm long. The russet-brown skin of the fruits is densely covered with short, stiff, brown hairs. The flesh is firm until fully ripened; it is glistening, juicy and luscious. The color of the flesh is bright-green, or sometimes yellow, brownish or off-white, except for the white, succulent center from which radiate many fine, pale lines. The flavor is subacid to quite acid; the flavor is suggested to be similar to that of the gooseberry or strawberry.[[https://en.wikipedia.org/wiki/Actinidia\\_deliciosa](https://en.wikipedia.org/wiki/Actinidia_deliciosa)]**KLAMATH PLUM**

 <DICTION>\$\$Chenopodium album\$\$ is a fast-growing weedy annual plant in the genus \$\$Chenopodium\$\$/. Though cultivated in some regions, the plant is elsewhere considered a weed. Common names include lamb's quarters, melde, goosefoot and fat-hen, though the latter two are also applied to other species of the genus Chenopodium, for which reason it is often distinguished as white goosefoot. It is sometimes also called pigweed. [[https://en.wikipedia.org/wiki/Chenopodium\\_album](https://en.wikipedia.org/wiki/Chenopodium_album)]

 <DICTION>The lemon, \$i\$Citrus limon\$/i\$(L.) Osbeck, is a species of small evergreen tree in the flowering plant family Rutaceae, native to Asia. The tree's ellipsoidal yellow fruit is used for culinary and non-culinary purposes throughout the world, primarily for its juice, which has both culinary and cleaning uses. The pulp and rind (zest) are also used in cooking and baking. The juice of the lemon is about 5% to 6% citric acid, with a pH of around 2.2, giving it a sour taste. The distinctive sour taste of lemon juice makes it a key ingredient in drinks and foods such as lemonade and lemon meringue pie. [<https://en.wikipedia.org/wiki/Lemon>]

 <MANSFELD>4474  
 <DICTION>Aloysia citrodora is a species of flowering plant in the verbena family Verbenaceae, native to Argentina, Paraguay, Brazil, Uruguay, Chile, Bolivia, and Peru. Common names include lemon verbena and lemon beebush. It was brought to Europe by the Spanish and the Portuguese in the 17th century. Lemon verbena leaves are used to add a lemon flavor to fish and poultry dishes, vegetable marinades, salad dressings, jams, puddings, greek yogurt and beverages. It also is used to make herbal teas, or added to standard tea in place of actual lemon (as is common with Moroccan tea). It can also be used to make a sorbet. In addition, it has anti-Candida albicans activity. In the European Union, Verbena essential oils (Lippia citriodora Kunth.) and derivatives other than absolute are prohibited when used as a fragrance ingredient (Commission Directive 2009/164/EU of 22 December 2009). <SCINAM>Tilia [DPNL 2003 13539]

<DICTION>\$Tilia \$/i\$ is a genus of about 30 species of trees native or bushes throughout most of the temperate Northern Hemisphere. Commonly called lime trees or "lime bushes" in the British Isles, they are not closely related to the lime fruit. Other names include linden, and basswood for the North American species.

<DICTION>*Eragrostis* is large and widespread genus of plants in the grass family, found in many countries on all inhabited continents and many islands. *Eragrostis* is commonly known as lovegrass or canegrass.

Lovegrass is commonly used as livestock fodder. The seeds appear to be of high nutritional value for some

animals, but they are also very tiny and collecting them for human food is cumbersome and hence uncommon. A

notable exception is teff (*Eragrostis tef*), which is used to make traditional breads on the Horn of Africa.

UF low calorie food

SN Renamed from \*LOW CALORIE FOOD\* [LanguaL 2008].

AI A claim that a food is low in energy, and any claim likely to have the same meaning for the consumer, may only be made where the product does not contain more than 40 kcal (170 kJ)/100 g for solids or more than 20 kcal (80 kJ)/100 ml for liquids. For table-top sweeteners the limit of 4 kcal (17 kJ)/portion, with equivalent sweetening properties to 6 g of sucrose (approximately 1 teaspoon of sucrose), applies [REGULATION (EC) No 1924/2006 Corrigendum 2007-01-18].

Food having 40 calories or less per amount customarily consumed (and per 50 grams of food if the amount customarily consumed is small). Meals and main dishes contain 120 calories or less per 100 grams of food [US FDA]

#### LOW FAT FOOD

FTC P0039

BT NO OR REDUCED FAT CLAIM OR USE [P0069]

AI A claim that a food is low in fat, and any claim likely to have the same meaning for the consumer, may only be made where the product contains no more than 3 g of fat per 100 g for solids or 1,5 g of fat per 100 ml for liquids (1,8 g of fat per 100 ml for semi-skimmed milk). [REGULATION (EC) No 1924/2006 Corrigendum 2007-01-18].

Food having 3 grams of fat or less per amount customarily consumed (and per 50 grams of food if the amount customarily consumed is small). Meals and main dishes contain 3 grams or less fat per 100 grams of food and not more than 30% of calories from fat [US FDA].

#### LOW FIBER FOOD

FTC P0063

BT FIBER SPECIAL CLAIM OR USE [P0049]

#### LOW IN CHOLESTEROL FOOD

FTC P0043

BT NO OR REDUCED CHOLESTEROL CLAIM OR USE [P0149]

AI Food having 20 milligrams or less cholesterol per amount customarily consumed (and per 50 grams of food if the amount customarily consumed is small). Meals and main dishes contain 20 milligrams or less cholesterol per 100 grams of food. If the food qualifies by special processing and total fat exceeds 13 grams per amount and labeled serving, the amount of cholesterol must be 'substantially less' (25%) than in a comparable food with significant market share (5% of market).

#### LOW IN SATURATED FAT FOOD

FTC P0057

BT SATURATED FAT-RELATED CLAIM OR USE [P0071]

AI A claim that a food is low in saturated fat, and any claim likely to have the same meaning for the consumer, may only be made if the sum of saturated fatty acids and trans-fatty acids in the product does not exceed 1.5 g per 100 g for solids or 0.75 g/100 ml for liquids and in either case the sum of saturated fatty acids and trans-fatty acids must not provide more than 10 % of energy. [REGULATION (EC) No 1924/2006 Corrigendum 2007-01-18].

Food having one gram or less saturated fat per amount customarily consumed and 15% or less of calories from saturated fat. Meals and main dishes contain one gram or less saturated fat per 100 grams food and less than 10% of calories from saturated fat.

#### LOW SALT FOOD

FTC P0083

BT LOW SALT OR SODIUM FOOD [P0038]

#### LOW SALT OR SODIUM FOOD

FTC P0038

BT NO OR REDUCED SALT OR SODIUM CLAIM OR USE [P0077]

UF low sodium or salt food

AI A claim that a food is low in sodium/salt, and any claim likely to have the same meaning for the consumer, may only be made where the product contains no more than 0,12 g of sodium, or the equivalent value for salt, per 100 g or per 100 ml. For waters, other than natural mineral waters falling within the scope of Directive 80/777/EEC, this value should not exceed 2 mg of sodium per 100 ml [REGULATION (EC) No 1924/2006 Corrigendum 2007-01-18].

Food having 140 milligrams or less salt or sodium per amount customarily consumed. Meals and main dishes have 140 milligrams or less salt or sodium per 100 grams food [US FDA]

#### LOW SODIUM FOOD

&lt;MANSFELD&gt;7687

<DICTION>The mandarin orange (*Citrus reticulata*), also known as the mandarin or mandarine, is a small citrus tree with fruit resembling other oranges, usually eaten plain or in fruit salads. Specifically reddish-orange mandarin cultivars can be marketed as tangerines, but this is not a botanical classification. Mandarins are smaller and oblate, rather than spherical like the common oranges (which are a mandarin hybrid). The taste is considered less sour, as well as sweeter and stronger. A ripe mandarin is firm to slightly soft, heavy for its size, and pebbly-skinned. The peel is very thin, with very little bitter white mesocarp, so they are usually easier to peel and to split into segments. Hybrids generally have these traits to a lesser degree.

AI <DICTION>marine mammal is a mammal that is primarily ocean-dwelling or depends on the ocean for its food. Mammals originally evolved on land, but later marine mammals evolved to live back in the ocean. There are five groups of marine mammals: (1) Order Sirenia: the manatee, dugong, and sea cow. (2) Order Carnivora, family Ursidae: the polar bear. (3) Order Carnivora, infrafamily Pinnipedia: the seal, sea lion, and walrus. (4) Order Carnivora, family Mustelidae: the Sea Otter and Marine Otter. (5) Order Cetacea: the whale, dolphin, and porpoise. <DICTION>A cherry tomato is a small variety of tomato that has been cultivated since at least the early 1800s and thought to have originated in Peru and Northern Chile. Cherry tomatoes range in size from a thumbtip up to the size of a golf ball, and can range from being spherical to slightly oblong in shape. The more oblong ones often share characteristics with plum tomatoes, and are known as grape tomatoes. The cherry tomato is regarded as a botanical variety of the cultivated berry, *Solanum lycopersicum* var. *escariforme*.  <DICTION> The mirabelle plum, also known as the mirabelle prune (*Prunus domestica* subsp. *syriaca*), is the edible drupaceous fruit of the mirabelle plum tree, a cultivar of the plum tree of the genus *Prunus*. The mirabelle is identified by its small, oval shape, smooth-textured flesh, and especially by its red, or dark yellow colour which becomes flecked in appearance. They are known for being sweet and full of flavour. The fruit is primarily used in fruit preserves and dessert pies, and its juice is commonly fermented for wine or distilled into plum brandy. Ninety percent of mirabelle plums grown commercially are made into either jam (70%) or eau de vie (20%). The plums are also excellent when eaten fresh. <DICTION>\$i\$Spondias\$/i\$ is a genus of flowering plants in the cashew family, \$i\$Anacardiaceae\$/i\$. The genus consists of 17 described species, 7 of which are native to the Neotropics and about 10 are native to tropical Asia. They are commonly named hog plums, Spanish plums, libas in Bikol and in some cases golden apples for their brightly colored fruit which resemble an apple or small plum at a casual glance. They are only distantly related to apple and plum trees, however. A more unequivocal common name is mombins.

<SCINAM>Abelmoschus moschatus subsp. tuberosus (Span.) Borss. Waalk. [GRIN 105540]

<DICTION>Abelmoschus moschatus is a perennial species comprising two recognised subspecies. Subsp. moschatus occurs in India, parts of Asia and the Pacific Islands. There are also naturalised occurrences of subsp. tuberosus in northern New South Wales. Subsp. tuberosus is found in northern Australia and in islands to the north. It is a delightful, soft, herbaceous trailing plant to 2 metres in diameter with soft hairy stems. It has an underground tuber and dies back to this tuber in the dry season, emerging again with the first substantial rains of the wet season. It is a relative of the edible okra and tubers and foliage were a source of food for Aborigines. [http://anpsa.org.au/a-mos.html]

 <SCINAM>Balaenoptera acutorostrata Lacépède, 1804 [MSW3 14300012]  
 <DICTION>The common minke whale or northern minke whale (*Balaenoptera acutorostrata*) is a species of minke whale within the suborder of baleen whales. It is the smallest member of the rorquals and the second smallest species of baleen whale. Although first ignored by whalers due to its small size and low oil yield, it began to be exploited by various countries beginning in the early 20th century. As other species declined larger numbers of common minke whales were caught, largely for their meat. It is now one of the primary targets of the whaling industry. There is a dwarf form in the Southern Hemisphere.[[http://en.wikipedia.org/wiki/Common\\_minke\\_whale](http://en.wikipedia.org/wiki/Common_minke_whale)]

BT DIETARY CLAIM OR USE [P0023]

SN Used for any claim which states, suggests or implies that a food has particular beneficial nutritional properties.

For European regulations, see

[http://ec.europa.eu/food/food/labellingnutrition/claims/community\\_register/nutrition\\_claims\\_en.htm](http://ec.europa.eu/food/food/labellingnutrition/claims/community_register/nutrition_claims_en.htm)

AI As defined in Corrigendum to Regulation (EC) No 1924/2006 of the European Parliament and of the Council of 20 December 2006 on nutrition and health claims made on foods, 'claim' means any message or representation, which is not mandatory under Community or national legislation, including pictorial, graphic or symbolic representation, in any form, which states, suggests or implies that a food has particular characteristics; specifically, 'nutrition claim' means any claim which states, suggests or implies that a food has particular beneficial nutritional properties due to:

(a) the energy (calorific value) it (i) provides; (ii) provides at a reduced or increased rate; or (iii) does not provide;

and/or

(b) the nutrients or other substances it (i) contains; (ii) contains in reduced or increased proportions; or (iii) does not contain.

AI &lt;SCIORDE&gt;Strigiformes [ITIS 177848]

<DICTION>Owls are a group of birds that belong to the order *Strigiformes*, constituting 200 extant bird of prey species. Most are solitary and nocturnal, with some exceptions (e.g., the Northern Hawk Owl). Owls hunt mostly small mammals, insects, and other birds, although a few species specialize in hunting fish. They are found in all regions of the Earth except Antarctica, most of Greenland and some remote islands. Though owls are typically solitary, the literary collective noun for a group of owls is a parliament. Owls are characterized by their small beaks and wide faces, and are divided into two families: the typical owls, *Strigidae*; and the barn-owls, *Tytonidae*. <DICTION>Oyster is the common name for a number of different families of salt-water bivalve molluscs that live in marine or brackish habitats. In some species the valves are highly calcified, and many are somewhat irregular in shape.

True oysters are members of the family *Ostreidae*. This family includes the edible oysters, which mainly belong to the genera *Ostrea*, *Crassostrea*, *Ostreola*, *Magallana*, *Saccostrea*. Pearl oysters are not closely related to true oysters, being members of a distinct family, the feathered oysters (*Pteriidae*).

 <DICTION>Palaemonidae is a family of shrimp in the order Decapoda. Two subfamilies are distinguished: Palaemoninae and Pontoniinae. Palaemoninae are mainly carnivores that eat small invertebrates and can be found in any aquatic habitat except the deep sea. The most significant genus is Macrobrachium, which contains commercially fished species. Pontoniinae inhabit coral reefs [https://en.wikipedia.org/wiki/Palaemonidae]

 <DICTION>Cantharellus pallens has sometimes been defined as a species in its own right, but it is normally considered to be just a variety (Cantharellus cibarius var. pallens). Unlike "true" Cantharellus cibarius it yellows and then reddens when touched and has a weaker smell. Eyssartier and Roux classify it as a separate species but say that 90% of the chanterelles sold in French markets are this, not Cantharellus cibarius. [http://en.wikipedia.org/wiki/Chanterelle]

<DICTION>Pangium edule (Indonesian: keluak or keluwak; Malay: kepayang) is a tall tree native to the mangrove swamps of Southeast Asia (Indonesia, Malaysia and Papua New Guinea). It produces a large poisonous fruit (the "football fruit") which can be made edible by fermentation. In Singapore and Malaysia, the seeds are best known as an essential ingredient in ayam (chicken) or babi (pork) buah keluak, a mainstay of Peranakan cuisine. Alternatively, the kernels may be ground up to form a thick black gravy called rawan (or rawon in parts of Indonesia). <DICTION>The *Asimina triloba*, the papaw, pawpaw, paw paw, paw-paw, or common pawpaw, is a small deciduous tree native to the eastern United States and Canada, producing a large, yellowish-green to brown fruit. It belongs to the genus *Asimina* in the same plant family (the *Annonaceae*) as the custard-apple, cherimoya, sweetsop, ylang-ylang and soursop. Pawpaw fruits have a sweet, custardish flavor somewhat similar to banana, mango, and cantaloupe, and are commonly eaten raw, but are also used to make ice cream and baked desserts. The fruit of the pawpaw is a large, yellowish-green to brown berry, 2-6 in (5-16 cm) long and 1-3 in (3-7 cm) broad, weighing from 0.7-18 oz (20-500 g), containing several brown/black seeds 1/2 to 1 in (15-25 mm) in diameter embedded in the soft, edible fruit pulp. <DICTION>Penaeidae is a family of marine crustacean in the suborder Dendrobranchiata, which are often referred to as penaeid shrimp or penaeid prawn. It contains many species of economic importance, such as the tiger prawn, whiteleg shrimp, Atlantic white shrimp and Indian prawn. Many prawns are the subject of commercial fishery, and farming, both in marine settings, and in freshwater farms.

 <DICTION>The Pili nut (*Canarium ovatum*), one of 600 species in the family *Burseraceae*, is native to Malesia. The genus name *Canarium* comes from the vernacular name 'kenari' in the Molucca Isles of Indonesia. Pili (pronounced pee-lee) fruit is a drupe, 4 to 7 cm long, 2.3 to 3.8 cm in diameter, and weighs 15.7 to 45.7 g. The most important product from pili is the kernel. When raw, it resembles the flavor of roasted pumpkin seed, and when roasted, its mild, nutty flavor and tender-crispy texture is superior to that of the almond. [PLANTS PINUS] <SCINAM>Pinus [DPNL 2003 11951] <DICTION>A pine is any conifer in the genus <i>Pinus</i> , of the family <i>Pinaceae</i> . Some species have large seeds, called pine nuts, that are harvested and sold for cooking and baking. The soft, moist, white inner bark (cambium) found clinging to the woody outer bark is edible and very high in vitamins A and C. A tea made by steeping young, green pine needles in boiling water (known as tallstrunt in Sweden) is high in vitamins A and C.  <DICTION>The *Boletus pinophilus*, commonly known as the pine bolete or pinewood king bolete, is a basidiomycete fungus of the genus *Boletus* found throughout Europe. The large, edible fruiting bodies known as mushrooms appear under pine trees, generally in summer and autumn. It has a matte brown to maroon-coloured cap and its stem is often large and swollen, and the overall colour may have an orange-red tinge. As with other boletes, the size of the fruiting body is variable. *Boletus pinophilus* is edible, and may be preserved and cooked.  <SCINAM>Plantago L. [PLANTS PLANT]  
 <SCINAM>Plantago [DPNL 2003 12024]  
 <DICTION>\$i\$Plantago\$/i\$ is a genus of about 200 species of small, inconspicuous plants commonly called plantains. \$i\$Plantago\$/i\$ species have been used since prehistoric times as herbal remedies. The herb is astringent, anti-toxic, antimicrobial, anti-inflammatory, anti-histamine, as well as demulcent, expectorant, styptic and diuretic. Externally, a poultice of the leaves is useful for insect bites, poison-ivy rashes, minor sores, and boils. In folklore it is even claimed to be able to cure snakebite. Internally, it is used for coughs and bronchitis, as a tea, tincture, or syrup. The broad-leaved varieties are sometimes used as a leaf vegetable for salads, green sauce, et cetera. Plantain seed husks expand and become mucilaginous when wet, especially those of \$i\$Plantago psyllium\$/i\$, which is used in common over-the-counter bulk laxative and fiber supplement products. AI <SCIFAM>Fabaceae [ITIS 500059]  
<DICTION> A legume is a plant or its fruit or seed in the family *Fabaceae* (or *Leguminosae*). Legumes are grown agriculturally, primarily for their grain seed called pulse, for livestock forage and silage, and as soil-enhancing green manure. Well-known legumes include alfalfa, clover, peas, beans, chickpeas, lentils, lupin bean, mesquite, carob, soybeans, peanuts and tamarind. [<https://en.wikipedia.org/wiki/Legume>]

<DICTION>Chitons are small to large marine molluscs in the class *Polyplacophora*, which formerly was known as *Amphineura*. There are approximately 940 extant and 430 fossil species recognized. These molluscs are also sometimes commonly known as sea cradles or "coat-of-mail shells". They are also sometimes referred to more formally as loricates, polyplacophorans, and rarely as polyplacophores. Chitons have a dorsal shell which is composed of eight separate shell plates or valves. These plates overlap somewhat at the front and back edges, and yet the plates articulate well with one another.
