## Grant County Natural Heritage Inventory data

The following is a list of species and natural features on the Natural Heritage Working List that have been documented in Grant County. These data are provided for general planning and assessment purposes only and **should not** be used for screening or reviewing proposed land development or land management projects. Learn about other methods for obtaining data, including [project-specific data](#).

Click on the table headings to sort the table, and click on a heading again to change the sort order. The scientific names link to pages with more information about each species or natural community. The count shown is the number of locations in Grant County where each species or feature has been documented and incorporated in the NHI Database. There are likely many additional locations which have not yet been documented. Also, these data were last updated on **May 13, 2016**, so there may be more recent county records not reflected here.
