

EMPORIUM

RANGE OF PLANTS

PURE BLONDE™

Liriope muscari 'LIRBLONDE' PBR

This unique Liriope has blonde foliage in spring. It stays blonde for up to three months, then slowly turns back to green to survive summer. If you cut it back to the ground in July, it will re-shoot blonde in August to September.

Pure Blonde™ Liriope is a tough plant, although the tips may burn in full sun or windy sites. The foliage will stay clean in shady positions.

Size: 30cm high x 40cm wide.

Uses: Mass plantings, feature planting and a great contrast to Black Mondo.

Position: Full sun to heavy shade, prefers protection from windy exposed conditions. Tolerates frost, drought and humidity. Pure Blonde™ Liriope suits sandy to clay soil.

FLORA BURST™

Callistemon viminalis 'CC06' PBR

Flora Burst™ Callistemon produces masses of red bottlebrush flowers in spring. The flowering nature of this plant is a real feature, and it often repeat flowers in autumn in certain regions of Australia.

The Flora Burst™ plant is relatively self cleaning, leaving far less seed pods on the plant after flowering. Another feature is its rustic red new growth in spring and autumn.

Size: 2m high x 1.5m wide.

Uses: Hedges, mass plantings and feature plantings.

Position: Full sun to light shade. Works in most soil types.

RUBY GREEN™

Dianella caerulea

Ruby Green™ Dianella has green to bronzed coloured leaves and a distinctive red coloured tinge to the edge of the leaf. It will display red tinged foliage through autumn, winter and spring but will become less noticeable through the summer to cope with the heat.

Size: 60cm high x 40-50cm wide.

Uses: Group plantings, border plantings and general home garden use.

Position: Full sun to part shade. Works in sandy to well drained clay soils.

TIA®

Thelionema grande 'TG100' PBR

Tia® Thelionema has blue green toned strappy leaves that are denser than the common form. In spring and summer it provides a fantastic flowering display of blue purple flowers. These flowers are larger than Dianella flowers, so they can be seen from further away.

Size: 60-70cm high x 60-70cm wide.

Uses: Can be used for specimen planting, small mass plantings, along paths, etc.

Position: Tolerates full sun to part shade. Tolerates a wide range of soils.

TWISTY™

Dianella congesta 'DCT500' PBR

Eye catching, twisting foliage that is great for coastal positions. At about 8 to 12 months old it gets twisted curly foliage and will keep that way for years. At this stage, it can be cut back close to the ground and it will start to twist again.

Size: 40-50cm high x 40-50cm wide.

Uses: Garden plantings.

Position: Full sun to part shade. Tolerates light frost to -2 degrees. Twisty™ Dianella suits most soil types but it's best to avoid nutrient poor soils. Not suited to colder climates that receive frosts below -2 degrees.

FEATHER TOP™

Baloskion tetraphyllum

Feather Top™ Baloskion is a real feature in any modern landscape, it's much more compact than the common form. Can work in relatively dry areas if irrigated, also if shaded. This plant won't seed, self sow or become weedy because it is dioecious. Gets very few pests and diseases.

Size: 50-75cm high x 45cm wide.

Uses: Moist, wet or boggy sites such as rain gardens, shady sites, pots and as a feature.

Position: Full sun and moderate to heavy shade (will need shade if a dry area and water if in full sun). Tolerates humidity and moderate frost. Feather Top™ Baloskion suits heavy clay to sandy soil types. It handles occasional inundation, but cannot sit in more than a few cm of water permanently (it handles a little bit more inundation than Juncus).

PRESTIGE®

Dianella revoluta 'REV101' PBR

Prestige® Dianella is a fine leaf *Dianella revoluta* with dark green coloured foliage that forms a very attractive clump as it matures. The leaves fold over slightly giving it good ground coverage. The abundance of blue flowers sit well above the foliage.

Size: 50cm high x 60-70cm wide.

Uses: Specimen or mass planting.

Position: Full sun to moderate shade. Tolerates humidity and frost. Suits moderate heavy to free draining soil types (prefers free draining). Avoid very poor soils. For raised and flat areas only, avoid wet feet.

LEMON TWIST™

Metrosideros excelsa 'LEMON TWIST' PBR

'Lemon Twist' is a variegated shrub with splashes of lemon colour on its foliage. Its dwarf habit, foliage colour and hardiness make it a fantastic choice for whatever your job may be.

Size: 1.5m high x 1m wide.

Uses: Hedges, borders, patio pots, planter boxes and colour contrast.

Position: Full sun. Most soil types, but prefers good drainage.
