**ORGANIC GROWERS:** please specify when ordering that you need organic or untreated seed. OUR SKU's: Our organic varieties will have an "OR" in the product code. Untreated seed will have an "NT" or "NCT". Pelleted seed is designated with a "Z" and primed is an "X". All pelleting and priming offered in this catalog are approved for organic growers.

**ORGANIC**

Organically produced seeds are identified with our organic symbol and will be clearly labeled on the packaging. We offer untreated conventionally grown seed if, to our knowledge, suitable organic production of a variety is not available. All varieties included in this catalog are developed and produced by traditional methods. None of the items have been genetically modified, and, to the best of our knowledge, none of this seed has been contaminated with any genetically modified material. We are certified as an Organic Handler by 'PCO,' Pennsylvania Certified Organic and 'USDA,' U.S. Department of Agriculture

**PROVIDER** 48 Days • #8009NT

A dependable favorite for those needing an early short-season variety with a concentrated set. Produces 5 1/2" round, light green, tender beans. Seed develops quickly, so pick promptly. **IR:** BCMV  
 1 lb. @ \$3.28      5 lb. @ \$2.58      50 lb. @ \$2.38      500 lb. @ \$2.18

**GREENBACK** 56 Days • #6540NT • SEEDWAY EXCLUSIVE

Widely adapted, high yielding, clean harvest (less broken pods). Uniform pod color and size. SEEDWAY EXCLUSIVE! **HR:** BCMV  
 10M @ \$3.17      80M @ \$2.92      800M @ \$2.82      4000M @ \$2.72

**BA0958** 55 Days • #9662NT

In addition to being early and high yielding, BA0958 shows resistance to Root Rot Fungal Complex. 5 1/2" pods are straight and dark green. The set is very concentrated for a one-time harvest. **R:** BCMV  
 10M @ \$3.52      80M @ \$3.27      800M @ \$3.17      4000M @ \$3.07

**PV857** For Hot Weather • 53 Days • #7802NT

The best heat set bean we have seen! Plant for mid summer flowering. Erect bush, concentrated sets of 3 - 4 sieve pods. **HR:** BCMV, **CI IR:** Ua:90  
 10M @ \$3.07      80M @ \$2.82      800M @ \$2.72      4000M @ \$2.62

**SYBARIS** Fancy, dark • 56 Days • #8785NT

Sybaris features fancy, dark green, 5 1/2" pods with very good flavor. The strong plants hold the beans up high, making Sybaris a good choice for hand-pick, although it can also be machine harvested. **HR:** BCMV **IR:** Ua:90  
 10M @ \$3.68      80M @ \$3.43      800M @ \$3.33      4000M @ \$3.23

**NEW HOME RUN** Roadside/Home Garden • 56 Days • #4457NT

A large bush which produces long, straight pods suitable for multiple hand harvests. Great bean taste. **HR:** BCMV  
 10M @ \$3.15      80M @ \$2.90      800M @ \$2.80      4000M @ \$2.70

**BLUE LAKE 274** 58 Days • #8033NT

A classic bush variety known for having the right texture and flavor for freezing and canning.  
 1 lb. @ \$3.39      5 lb. @ \$2.69      50 lb. @ \$2.49      500 lb. @ 2.29

**NEW NAVAJO** Flat Pod Roma Type • 56 Days • #4445NT

A flat pod bean with a compact erect bush. Straight pods which are 0.75" wide.  
 10M @ \$3.94      80M @ \$3.69      800M @ \$3.59      4000M @ \$3.49

**CARSON** Yellow Wax • 53 Days • #9384NT

An early wax that handles stress well with good sets and yields. Carson has nice straight pods that color up while still small. 5 1/2" round pods.  
**HR:** BCMV, **CI IR:** BCTV, Ps  
 10M @ \$3.51      80M @ \$3.26      800M @ \$3.16      4000M @ \$3.06

Other beans usually available untreated include: Caprice, Colter, Long Tendergreen, Valentino, Roma II, Jade, Greencrop, Goldenrod (wax), Top Crop, Kentucky Wonder 125, State Half Runner, Top Pick Pinkeye and California Blackeye #5.

NAVAJO^

SUPREMO PLUS^

**FORDHOOK 242** Lima • 75 Days • #8059NT

Each 3"- 4" pod contains 3 - 4 beans. Vigorous, sturdy plants produce consistently large crops of excellent quality beans with a good shelf life. Best large seed lima for fresh market. Requires warm soils.  
 1 lb. @ \$4.35    5 lb. @ \$3.67    50 lb. @ \$3.27    500 lb. @ \$2.97    2500 lb. @ \$2.87

**SUPREMO PLUS** Horticultural Bean • 72 Days • #6237NT

The true bush bean is far earlier to pick than vining types. Plump pods have white beans and cranberry stripes. Beans are usually eaten fresh (like a fresh lima) but can be dried.  
 5 lb. @ \$4.85    50 lb. @ \$4.45    500 lb. @ \$4.10    2500 lb. @ \$3.95

**FAVA BEAN** Shell Bean/Cover Crop • 85 Days • #8062NT

Good for your soil and spring sales.  
 5 lb. @ \$3.67    50 lb. @ \$3.27    500 lb. @ \$2.92    2500 lb. @ \$2.77

**QUEEN ANN Black-Eye** Southern/Cow Pea • 68 Days • #8064NT

This black-eye pea with a green and tan pod was developed in Virginia for cooler Northern fresh market growers. Compact vines.  
 5 lb. @ \$2.83    50 lb. @ \$2.58    500 lb. @ \$2.42    2500 lb. @ \$2.30

**BRESKO** 50 Days • #4607NT

Smooth round roots grow medium-fast and have vigorous medium-large, clean leaves. Bresko has some of the best Cercospora resistance available in a red beet. It's healthy, medium sized tops and nice shape make it perfect for bunching.

10M @ \$1.69      50M @ \$1.62      500M @ \$1.48      1MM @ \$1.41

**BORO** 51 Days

Boro is the best choice for baby beets and bunching, due to a refined shape and smooth skin while small (it will grow full-sized, quickly). Unlike other varieties that are good for baby beets, Boro is quite early and features a very deep color and sweet flavor. Round to slightly top-shaped roots have a small stem/crown attachment. 12" tops stay cleaner than any other red variety we know. It is widely adapted.

10M @ \$1.78      50M @ \$1.70      500M @ \$1.55      1MM @ \$1.48

**BOHAN** 52 Days • #6790NT

This eye catching new beet has very smooth skin and a round shape. It has vigorous, strong, and clean tops. An excellent beet for its ability to handle stress including heat, plus too much water or not enough. Tops are tall and clean and internal quality is excellent with great sweetness.

10M @ \$1.34      50M @ \$1.29      500M @ \$1.18      1MM @ \$1.12

**RED ACE** 53 Days

Early maturing with 3" roots that are uniformly globe-shaped with small taproots. Almost no zoning. This heat resistant beet has smooth skin and a high sugar content. IR: Cercospora LS.

CHIOGGIA "Guardsmark" ^

**TOUCHSTONE GOLD** 60 Days • #7455OR **ORGANIC**

Touchstone is the most refined golden beet, with a smooth skin and a solid, non-fibrous interior. Light green, semi-savoyed leaves contrast with the golden roots.

10M @ \$5.92      50M @ \$5.46      500M @ \$5.01      1 MM @ \$4.69      5 MM @ \$4.55

**CHIOGGIA "Guardsmark"** 60 Days • #8896OR **ORGANIC**

An improved strain of heirloom beet grown for distinctly candy-striped roots that look like a target when cut open.

10M @ \$2.86      50M @ \$2.74      500M @ \$2.50      1 MM @ \$2.38

**DETROIT SUPREME** 65 Days • #5610SNT

Deep red beets are approximately 2 1/2" - 3" across with smooth skin. Roots are globe-shaped with solid, deep red flesh that is rich and flavorful. Strong, red-tinged top. Good for winter storage.

4 oz. @ \$5.76      1 lb. @ \$10.56      5 lb. @ \$10.08      25 lb. @ \$9.60

**DETROIT DARK RED** 65 Days • #8093OR **ORGANIC**

Deep red beets are approximately 2 1/2" - 3" across with smooth skin. Roots are globe-shaped with solid, deep red flesh that is rich and flavorful. Strong, red-tinged top. Good for winter storage.

4 oz. @ \$10.80      1 lb. @ \$19.80      5 lb. @ \$18.90      25 lb. @ \$18.00

Other beets usually available untreated include: **Early Wonder**

**LIEUTENANT** 58 Days From Transplant • #9740NT

A nice improvement in the "first early" slot, Lieutenant is uniform maturing with a medium-large, smooth, semi-domed, dark green head. It can be used in spring and fall. Improvements include better holding and less likelihood of problems, such as leaves growing in the heads.

2.5M @ \$9.49 10M @ \$8.72 30M @ \$7.87 100M @ \$7.31 400M @ \$7.03

**JACARANDA** 50 Days • #4424NT

Perfect for a specialty market, Jacaranda makes a unique, purple head with early maturity. Easy to grow, although we recommend avoiding the first crops in early spring.

1M @ \$56.00 2.5M @ \$54.00 10M @ \$49.60 30M @ \$44.80 100M @ \$41.60 400M @ \$40.00

**BURGUNDY** 50 Days • #4471NT

This striking purple shoot type broccoli is easy to grow, and can be planted in most slots. Snap out and sell, the first shoots from the center of the plant, and it will quickly send up side shoots. The shoot stems and florettes are sweet and tender. Color is best when raw or quickly steamed. This is a normal, vigorous full-sized plant.

1M @ \$51.52 2.5M @ \$49.68 10M @ \$45.63 30M @ \$41.22 100M @ \$38.27 400M @ \$36.80

**EMERALD CROWN** 60 Days From Transplant • #5232NT

For most growers from North to South, Emerald Crown is the first choice for crown cut in warm weather. It has a smooth, high dome and short stem. The color is excellent and it resists purpling from cold weather.

1M @ \$10.61 2.5M @ \$10.23 10M @ \$9.40 30M @ \$8.49 100M @ \$7.88 400M @ \$7.58

**MONTEBELLO** 62 Days • #4470NT

For those wanting to grow separate shoots of broccoli, Montebello is the most reliable variety we have seen. Break out the initial head (which is salable) and you will get many shoots growing right back. Long green stems have a tight cluster of beads to make a small floret. Very sweet.

1M @ \$51.52 2.5M @ \$49.68 10M @ \$45.63 30M @ \$41.22 100M @ \$38.27 400M @ \$36.80

**GREEN MAGIC** 62 Days • #6330NT

This widely adapted, bright green variety features good field holding for spring or fall crops. It is the best choice for growers that use side shoots.

2.5M @ \$8.63 10M @ \$7.92 30M @ \$7.16 100M @ \$6.65 400M @ \$6.39

**ASTEROID** 63 Days • #7892NT

With excellent uniformity and good heat tolerance, we think Asteroid will prove to be widely adapted for both spring and summer seeding. Asteroid has medium-sized, smooth stems making it one of the best heat tolerant broccoli varieties for bunching, but can also be used for crown cut.

1M @ \$9.62 2.5M @ \$9.27 10M @ \$8.52 30M @ \$7.69 100M @ \$7.14 400M @ \$6.87

**GYPSY** 63 Days • #9202NT

Gypsy has good vigor and is good for heavy soils or marginal fertility. It produces a beautiful blue green head that can be used for bunching or crown cut.

2.5M @ \$7.94 10M @ \$7.29 50M @ \$6.59 100M @ \$6.12 400M @ \$5.88

**BELSTAR** 66 Days • #9243OR **ORGANIC**

Main season variety for fall crops. Excellent crown cut with very heavy, high-domed, tight heads, and refined, small uniform beads.

1M @ \$15.40 2.5M @ \$14.85 10M @ \$13.64 30M @ \$12.32 100M @ \$11.44 400M @ \$11.00

**EASTERN CROWN** 66 Days • #7681NT

This heat tolerant, early maturing variety holds in the field extremely well and will keep its nice dark green color in hot weather.

1M @ \$11.97 2.5M @ \$11.54 10M @ \$10.60 30M @ \$9.58 100M @ \$8.89 400M @ \$8.55

**NEW** **WOLFMAN** 58 Days • #4195NT

New! This is a bunching-only variety producing smaller heads held above the plant. Make sure to plant at higher populations.

1M @ \$8.26 2.5M @ \$7.97 10M @ \$7.32 30M @ \$6.61 100M @ \$6.14 400M @ \$5.90

JACARANDA^

WOLFMAN^

EMERALD CROWN^

MONTEBELLO^

GREEN MAGIC^

EMERALD STAR^

AVENGER^

EASTERN CROWN^

**DIPLOMAT** 67 Days • #6764NT

Offers a good combination of heat tolerance and head quality. A longer, cleaner stem makes Diplomat good for bunching.

1M @ \$8.44 2.5M @ \$8.14 10M @ \$7.48 30M @ \$6.75 100M @ \$6.27 400M @ \$6.03

**IMPERIAL** 71 Days Average, With A Range Of 66-73 • #8237NT

Imperial needs warm days for the best quality. Widely adapted, it can be used in winter in the South. Imperial should be used for crown-cut only where it will make sturdy, large, heavy heads. Imperial is earlier maturing in spring, and later in fall.

1M @ \$9.74 2.5M @ \$9.40 10M @ \$8.63 30M @ \$7.80 100M @ \$7.24 400M @ \$6.96

**EMERALD STAR** 74 Days • #7809NT

This is an exciting variety, maturing a few days after Imperial. It can handle extreme temperatures better than most other varieties and brings a new level of heat to a later maturing slot. Field holding is excellent. The plant is vigorous and the heads, for crown cut, are beautiful, large and firm.

1M @ \$10.36 2.5M @ \$9.99 10M @ \$9.18 30M @ \$8.29 100M @ \$7.70 400M @ \$7.40

**AVENGER** 80 Days • #5114NT

Avenger is widely used for harvest in cooler weather in fall, producing large, dense heads. If seeded early, it is only a few days later than Imperial. If seeded late, it will mature very late, similar to Expo. It is used for crown cut.

2.5M @ \$8.63 10M @ \$7.92 30M @ \$7.16 100M @ \$6.65 400M @ \$6.39

Other broccoli usually available untreated include:  
Everest, Marathon

BROCCOLI

**EXPO** 102 Days • #5151NT

Expo is an excellent choice for the end of the season, to mature in cold weather. Medium sized, high dome heads can be used for crown cut or bunching.

2.5M @ \$8.63 10M @ \$7.92 30M @ \$7.16 100M @ \$6.65 400M @ \$6.39

**SPRING RAPINI** *Broccoli Raab* • 52 Days From Seed • #5366NT

Nice balance between vigor and slow bolting, this classic is an all around nice broccoli raab.

1 oz. @ \$3.09 4 oz. @ \$7.21 1 lb. @ \$21.63 5 lb. @ \$20.60

SPRING RAPINI^

EXPO^

BRUSSELS SPROUTS

**DAGAN** 100 Days • #8834OR **ORGANIC**

With a perfectly tall and straight stalk, and early maturity, Dagan has excellent yield potential and fancy quality. Dense, round sprouts are dark green. If you fertilize well early, and then cut back, the lower leaves will shed for easy harvest.

250 sds @ \$8.72 2.5M @ \$33.62 10M @ \$30.88 30M @ \$27.89 100M @ \$25.90

**MARTE** 103 Days • #7799NT

If you want to grow brussels sprouts without coddling them, give Marte a try. It handles heat and fertility stress better than most varieties.

Capitola, Dimitri, Franklin

CABBAGE • FRESH MARKET

**TIARA** *Fresh Market* • 62 Days • #6013NT

Cabbage does not get tastier (or earlier) than Tiara! Leaves are sweet, tender crisp, thin and lettuce like. Tiara is a perfect, non-wilting lunch box substitute for lettuce.

2.5M @ \$10.08 10M @ \$9.28 30M @ \$8.80 100M @ \$8.24 400M @ \$8.00

**FARAO** *Fresh Market, Small Round* • 63 Days • #8399OR **ORGANIC**

Farao is a sturdy workhorse cabbage that can take rough handling. Despite its early maturity, it holds well in the field. Medium-small dense heads weigh 2 - 3 lbs. Farao is uniform and has tip burn resistance.

2.5M @ \$14.04 10M @ \$13.10 30M @ \$12.06 100M @ \$11.44 400M @ \$10.71

**CARAFLEX** 68 Days • #5602OR **ORGANIC**

Did you know pointed cabbage is the most popular type in much of Europe? Caraflex is a delicious salad crop to use like lettuce (same maturity) but easier to grow and store, and more nutritious. The size can be controlled with spacing, and, at a higher density, Caraflex will have a tall, narrow shape similar to romaine. The salad quality is best if harvested before densely packed.

1M @ \$51.44 2.5M @ \$48.01 10M @ \$44.20 30M @ \$41.91 100M @ \$39.24

**ARTOST** *Fresh Market* • 68 Days • #9386NT

Artost offers earliness, uniformity, excellent field holding, and main season quality. Medium-sized, 3 - 6 lb. heads have a short core. Widely adapted. HR: Foc AB: TB

2.5M @ \$7.98 10M @ \$7.34 30M @ \$6.96 100M @ \$6.52 400M @ \$6.33

**CONQUEROR** *Fresh Market* • 70 Days • #4473NT

Large, early round cabbage with good flavor. Beautiful dark green color and a fancy appearance. Size will vary with spacing. 5 - 7 lbs. HR: Foc

1M @ \$9.32 2.5M @ \$8.69 10M @ \$8.00 30M @ \$7.59 100M @ \$7.11 400M @ \$6.00

Bermeo is one of the best early heat tolerant varieties. It has a very good inside wrap but may need to be tied for larger sizes. Excellent quality and uniformity.

2.5M @ \$31.65    10M @ \$30.03    30M @ \$28.67    100M @ \$27.05

**CLARIFY** 66 Days • #5381NT

Clarify is an early-main season variety that is heat tolerant and has the biggest plant in this maturity. It is one of the few varieties with Club Root resistance, but even if that isn't a problem, Clarify is well worth trying.

250 sds @ \$6.74    2.5M @ \$22.55    10M @ \$21.39    30M @ \$20.43    100M @ \$19.27

**FREEDOM** 67 Days • #5077NT

Freedom has very good heat tolerance for reliable spring and fall crops. The heads are solid, with a high dome and very good inside wrap leaves.

2.5M @ \$35.05    10M @ \$33.26    30M @ \$31.76    100M @ \$29.96

**NEW** **ALCALA** 69 Days • #5335NT

Alcala has a tight and complete wrap when harvested at a smaller size (12 count). Heads can get larger but will then need to be tied. Heads are high round and dense. It has good heat tolerance and is widely adapted. Great performance in the southeast over winter and works both spring and fall in the north.

250 sds @ \$7.11    2.5M @ \$23.75    10M @ \$22.53    30M @ \$21.52    100M @ \$20.30

**NEW** **TWISTER** 71 Days • #4262NT

Twister is widely adapted both regionally and by planting date, working from spring through late fall and in the winter in the south. Twister has good heat tolerance coupled with a big vigorous plant, and with distinctive twisted leaves. The wrap is so good and big that you will not likely have to rubber band it.

250 sds @ \$4.64    2.5M @ \$15.50    10M @ \$14.71    30M @ \$14.05    100M @ \$13.25

**FLAMENCO** 71 Days • #6690NT

Flamenco is a productive and uniform hybrid for fall and late fall crops. It has unique, large, broad feather-shaped leaves that shade the heads well to keep them white. Heavy, dense heads have very good, sweet flavor. Great overwinter in the Southeast.

250 sds @ \$7.11    2.5M @ \$23.75    10M @ \$22.53    30M @ \$21.52    100M @ \$20.30

**TOLEDO** 75 Days • #5391NT

Toledo is the most reliable variety for late fall, in part due to good heat tolerance. The large, solid, high dome head is produced on a tall stem and is perfectly wrapped and very leafy.

250 sds @ \$5.52    2.5M @ \$18.44    10M @ \$17.49    30M @ \$16.71    100M @ \$15.76

**AMAZING** 75 Days • #8340NT

Firm, pure white curds inside self-wrapping leaf jacket for fall harvest. Amazing has mixed maturity, so it offers an extended harvest period.

2.5M @ \$9.63    10M @ \$9.14    30M @ \$8.72    100M @ \$8.23

**FIORETTO 60** 60 Days • #4660NT

This unique cauliflower makes a loose head of separate sweet-flavored florets. This open headed type is traditional to some Chinese markets but Fioretto is much improved for uniformity and predictability. Do not transplant in really cold weather.

250 sds @ \$14.79    2.5M @ \$49.43    10M @ \$46.90    30M @ \$44.79    100M @ \$42.25

**NEW** **CLEMENTINE** 67 Days • #4348NT

Clementine brings a whole new level of eye-popping color to your cauliflower mix. Compared to Flamestar, uniformity and field holding are similar (and excellent) but Clementine will weigh slightly less. We think both belong in your mix!

250 sds @ \$23.81    2.5M @ \$74.09    10M @ \$72.77    30M @ \$69.46    100M @ \$66.15

**FLAMESTAR** *Creamy Orange* • 70 Days • #7642NT

This creamy-orange cauliflower makes a large, heavy head. Nearly problem free, with great uniformity. Compared to Cheddar, the color may be lighter.

250 sds @ \$23.64    2.5M @ \$73.54    10M @ \$72.23    30M @ \$68.94    100M @ \$65.66

CAULIFLOWER

**DePURPLE** Purple • 67 Days • #7899NT

This stunning replacement for Graffiti produces larger, heavier heads at an earlier maturity. The floret stems are white and attractive when cut. It tastes good raw and holds its color cooked. It shows sufficient heat tolerance to be used in a spring seeding. The plant is large and strong.

250 sds @ \$23.64   2.5M @ \$73.54   10M @ \$72.23   30M @ \$68.94   100M @ \$65.66

**VERONICA** Green Romanesco • 77 Days

7"-10" heads have spiraled, peaked florets with a nut-like texture and taste, great for salads and dips. Best used in mid-late summer plantings that mature in fall. Veronica has good uniformity of maturity and holds well in cool weather.

**ORGANIC**

Organically produced seeds are identified with our organic symbol and will be clearly labeled on the packaging. We offer untreated conventionally grown seed if, to our knowledge, suitable organic production of a variety is not available. All varieties included in this catalog are developed and produced by traditional methods. None of the items have been genetically modified, and, to the best of our knowledge, none of this seed has been contaminated with any genetically modified material. We are certified as an Organic Handler by 'PCO,' Pennsylvania Certified Organic.

**VISION MXR** *Yellow SH<sub>2</sub> • 75 Days • #8131NT*

"MXR" equals added disease resistance and enhances one of the best tasting sweet corn varieties. Exceptionally tender and sweet with large attractive ears. A must for roadside markets.

TASTY GREEN^

**A-1014 Estelal** *American Type* • 55 Days • #7933NT

**SEEDWAY EXCLUSIVE!** A-1014 brings an entirely new level of quality, earliness, and yield to the "American" style of eggplant. It is up to 10 days earlier than any other variety and will provide a lot of fruit early. The fruit has a refined look, is firm and glossy, and a "just right" size for most grocery stores. The calyx are totally spineless and won't scratch the fruit, your customers or harvest crew. Fruit separates easily from the plant with a gentle tug. The plant is compact but stays healthy and productive for a full season. Most growers will not need to stake A1014 and plants can be crowded.

250 sds. @ \$11.20      1M @ \$44.48      5M @ \$38.72      25M @ \$35.20      100M @ \$32.00

**SANTANA** *American Type* • 65 Days

**SEEDWAY EXCLUSIVE!** Not only is Santana super productive over a long season, but it is also versatile with shiny, firm fruit that can be harvested from medium through extra-large sizes. The smooth, tear-shaped fruit have few, if any, spines on the cap. Santana sets freely at cooler and warmer than usual temperatures. The plant is huge and stays healthy.

*Eazyleaf lettuce is easy to cut, prepare and package and offers excellent shelf life. The thicker leaf texture makes it less wilted than baby leaf lettuce. In ideal conditions, Eazyleaf will grow back and can be cut a second time. Even sized leaves with vivid colors have an excellent presentation. Eazyleaf is a series from Vitalis that produces small, dense heads that can be sold whole, or, with one knife cut, the heads fall into separate evenly-sized and shaped leaves. With a heavier leaf texture, Eazyleaf has better shelf-life than baby lettuce.*

**GREEN REEF EAZYLEAF** Green Specialty • #8368XZOR **ORGANIC**

Green Reef has elongated, jagged leaves with a frisée look, but a crunchy, sweet taste. HR: BI 16-31/Nr0. Organic seed & organic prime and pellet.

PATTERSON^

**BRADDOCK** *Long Day Storage • 105 Days • #9456NT*

Large, perfect, globe-shaped bulbs have a thick brown skin. Braddock is widely adapted, consistently successful, and stores through May. It has a small neck and thick skin.

100M @ \$3.17      500M @ \$3.02

**NEW REDWING** *Long Day Storage • 118 Days • #8975NT*

Market-leading, premium, quality, red, long day onion. Excellent color and uniformity. Potential to store through May for extended marketing period. Suitable for transplant or direct seeded production.

5M @ \$5.64      25M @ \$5.19      100M @ \$4.74      500M @ \$4.51

**SAFRANE** *Long Day Storage • 106 Days • #6742NT*

Reliably produces very hard, jumbo size bulbs with beautiful dark bronze skin. Vigorous tops and roots are thrifty with fertilizer, so well adapted to marginal and mineral soils. Storage potential through May.

5M @ \$3.98      40M @ \$3.65      500M @ \$3.32

**EXPRESSION** *Sweet Intermediate Day • 105 Days*

Large firm, sweet onions with ability to store 10 - 12 weeks. Has good sugar content so it will caramelize when cooked and has low pungency so is mild when raw.

Untreated • #6273NT

5M @ \$4.00      25M @ \$3.68      100M @ \$3.36      500M @ \$3.20

Untreated Pelleted • #6273ZNT

5M @ \$4.30      40M @ \$3.94      500M @ \$3.58

REDWING^

SAFRANE^

EXPRESSION^

BRADDOCK^

We suggest that onion growers in Northern areas grow transplants rather than direct seeding. Due to day length considerations, onions harvested directly from direct-seeded fields may not make enough size. Note that "days to maturity" is "from seed".

**LONG WHITE** *Bunching • 65 Days • #8653NT*

Winter hardy bunching; sow in spring for summer crop or sow in fall for overwintering spring crop. Will naturally divide if left in the field.

1/4 oz. @ \$2.38      1 oz. @ \$4.46      1 lb. @ \$31.24      5 lb. @ \$29.75

**PARADE** *Bunching • 67 Days • #8654OR* **ORGANIC**

Heat resistant bunching (green/scallion) onion. Thick, cylindrical white stems do not bulb. Somewhat short leaves help in packing.

10M @ \$0.54      50M @ \$0.50      250M @ \$0.45

**PICADOR** *Shallot • 110 Days • #6314NT*

Seed-grown shallots are economical to produce and of equal quality to set-grown. When peeled, Picador is a beautiful tawny pink with a football shape. It peels easily and with no dry skin between doubled bulbs. Excellent yields and medium-long storage.

10M @ \$8.97      50M @ \$8.56      250M @ \$8.15

**CONSERVOR** *Shallot • 112 Days • #6275OR* **ORGANIC**

A classic French teardrop shape is complemented with ideal flavor and a fresh pink color. It is easy to peel and there is no paper skin between the doubles. Conservor stores very well.

**CHOCOLATE SPRINKLES** *Striped Grape • 75 Days • #7743NT* 

First in this type with a disease resistance package. Unique dark red with green stripe exterior and purple flesh color. Produces more fruit with better flavor than similar O.P. varieties. **HR:** Fo l(1)  
100 sds. @ \$16.37 1M @ \$117.83 5M @ \$113.46 25M @ \$112.37 100M @ \$109.10

## GRAPE DETERMINATE VINE

**RUBY CRUSH** *Red Grape • 60 Days • #7552NT*

Ruby Crush is blazing a new trail in the tomato world! It works in a container, it shines in the field, and the sugary-acid balanced fruits resist cracking, unlike other determinate grape varieties. Plants are strong with good leaf cover preventing sun damage. The compact plants can be grown with minimal support (2 foot high fence trellising or standard tomato cage). **HR:** Fol (1,2), For, ToMV: 0-2 IR: Ss  
100 sds. @ \$27.00 1M @ \$194.40 5M @ \$187.20 25M @ \$185.40 100M @ \$180.00

**BHN 785** *Red Grape • 68 Days • #7441NT*

The determinate vine offers good cover for the most consistently-sized, best flavored grapes on the market. **HR:** Fol(1)  
100 sds. @ \$30.00 1M @ \$216.00 5M @ \$208.00 25M @ \$206.00 100M @ \$200.00

## HEIRLOOM • INDETERMINATE VINE

**PERSIMMON** *80 Days • #9378NT* 

12 - 16 oz. oblate fruit are a rich persimmon (neon-orange) color. The flavor is unique and good. Persimmon is outstanding in tunnels, yielding as well or better than the best "modern" varieties.  
⅓ oz. @ \$7.11 ¼ oz. @ \$9.48 1 oz. @ \$26.08 4 oz. @ \$78.25 1 lb. @ \$237.11

**CHEROKEE PURPLE** *72 Days • #9377OR* **ORGANIC**

Both the exterior and interior are a combination of purple, pink, brown, red, and green. Compact, indeterminate plant type, very good flavor, and one of the earliest large fruited (12 - 14 oz.) heirlooms to ripen.  
⅓ oz. @ \$11.13 ¼ oz. @ \$14.85 1 oz. @ \$40.82 4 oz. @ \$122.47 1 lb. @ \$371.13

**GREEN ZEBRA** *75 Days • #8423OR* **ORGANIC**

Flashy dark green stripes on a yellow-green background. The flesh is yellowish-green and tangy. 5 - 9 oz.  
⅓ oz. @ \$11.13 ¼ oz. @ \$14.85 1 oz. @ \$40.82 4 oz. @ \$122.47 1 lb. @ \$371.13

**BRANDYWINE PINK** *78 Days • #9375OR* **ORGANIC**

Brandywine produces deep pink fruit that weigh about one pound each and are oblate, meaty and juicy. Amazing flavor.  
⅓ oz. @ \$11.13 ¼ oz. @ \$14.85 1 oz. @ \$40.82 4 oz. @ \$122.47 1 lb. @ \$371.13

**YELLOW DOLL** *Yellow Flesh • 68 Days • #8776NT*

This favorite, small watermelon has vibrant yellow flesh. Oval fruit weighs 5 - 7 lbs. The rind is a medium green color with dark green stripes and the flesh is sweet and extra crisp.

100 sds. @ \$14.92    1M @ \$115.59    5M @ \$105.34    50M @ \$93.22

**JADE STAR** *Red Flesh • 75 Days • #6371NT*

A popular and productive round black watermelon frequently used as a pollinator. Very good flavor. Produces fruit that is 13 - 16 lbs.

100 sds. @ \$14.12    1M @ \$109.39    5M @ \$99.69    50M @ \$88.22

**ESTRELLA** *Allsweet Type • 84 Days • #5027NT*

Over the past few years, Estrella has become our top-selling seeded variety in our "conventional" catalog due to yield, appearance, and reliable quality. It has uniform, very attractive, 20 - 24 lbs., cylindrical fruit with a deep red flesh and tiny black seeds. Sweet, firm flesh. The vigorous large-leaved vine stands stress well. IR: Co1, Fon 1

100 sds. @ \$12.32    1M @ \$95.48    5M @ \$87.01    50M @ \$77.00

**SSX8585** *Allsweet Type • 85 Days • #9477NT*

SSX8585 performs well in areas where size is needed to fit the market needs. The vines are strong and vigorous providing excellent protection for the early flowering pollinizer. Resistance to Fusarium 1 and Anthracnose 1.

1M @ \$76.88    5M @ \$70.06    50M @ \$62.00

YELLOW DOLL<sup>^</sup>JADE STAR<sup>^</sup>ESTRELLA<sup>^</sup>SSX8585<sup>^</sup>**EXTAZY** *Dark Mottled Stripes • 80-85 Days • #6254NT*

Extazy has a very appealing rind that is on the thick side for easy handling and shipping. It is very high yielding. 4.5 - 6.5 lbs.

100 sds. @ \$41.30    1M @ \$278.76    5M @ \$265.85    25M @ \$258.11

**OCELOT** *Dark Tiger Stripes • 84 Days • #7741NT*

Outstanding internal qualities: excellent taste and texture, high brix and deep flesh color. Produces a mix of 6 and 8 count fruit. 3 - 5 lbs.

100 sds. @ \$44.44    1M @ \$299.94    5M @ \$286.05    25M @ \$277.72

**SERVAL** *Light Mottled Stripes • 85 Days • #8973NT*

Excellent uniformity and grading, excellent flesh color, very good shelf life and early behavior. 4 - 6 lbs.

100 sds. @ \$42.54    1M @ \$287.17    5M @ \$273.88    25M @ \$265.90

**LEOPARD** *Dark Tiger Stripes • 85 Days • #7353NT*

Leopard is attractive, productive, and has excellent flavor with firm flesh and good holding qualities. The rind is sturdy but in proportion to its size. It is easy to judge maturity for Leopard by a subtle color change. 5 - 8 lbs.

100 sds. @ \$41.30    1M @ \$278.76    5M @ \$265.85    25M @ \$258.11

**NEW WM EXCITE** *Crimson Round • 88 Days • #4597NT*

A new generation of quality crimson fruits with high yield. Very strong vines with tolerance to Powdery Mildew. Fruit has strong internal qualities with good brix. IR: Sf

1M @ \$241.92    5M @ \$230.72    25M @ \$224.00

**BELMONT** *Dark Green Stripes • 90 Days • #7771NT*

Features an extremely strong and vigorous vine with excellent yield potential. Belmont has extremely firm flesh, small pips and is very uniform and productive. 5 - 6 lbs. This mini also has an intermediate resistance to Fusarium Wilt Race 1 and Anthracnose Race 1.

1M @ \$254.88    5M @ \$243.08    50M @ \$236.00

EXTAZY<sup>^</sup>OCELOT<sup>^</sup>SERVAL<sup>^</sup>LEOPARD<sup>^</sup>WM EXCITE<sup>^</sup>

**NEW CO-PILOT** *Light Green Rind • #5312NT*

Sprawling vine with heavy flowering. Early and extended flowering duration. Pollen in the flowers is very fertile over a wide range of growing conditions. Fruit weighs 3 - 6 lbs. with light red flesh, and solid light green rind. **IR:** Fon:1, Co:1  
 1M @ \$136.85    5M @ \$124.95    50M @ \$119.00

**WILD CARD PLUS** *Tiger-Striped Rind • #7639NT*

Small, brittle fruit allows for easy triploid harvest. Tiger-striped rind pattern. Excellent pollen quality for maximum yield. **IR:** Fon:1, Co1  
 1M @ \$235.75    5M @ \$215.25    50M @ \$205.00

**ACE** *Light Green Rind • #6773NT*

Ace has long healthy vines that are low growing to bring the male flowers into close proximity with the triploid, without creating competition. Fruit is small, grey-green, and brittle. Ace flowers early enough to pollinate any seedless varieties.  
 100 sds. @ \$23.68    1M @ \$170.20    5M @ \$155.40    50M @ \$148.00

**ACE PLUS** *Light Green Rind • #7640NT*

Ace Plus offers a very early flowering date that makes pollen available for the first female flowers produced by the triploid. Plus, it continues to flower well beyond the hybrid. Light green. **IR:** Fon:1, Co1  
 100 sds. @ \$28.64    1M @ \$205.85    5M @ \$187.95    50M @ \$179.00

**SUNBRIGHT SUPREME** *64 - 70 Days • #5421NT*

Sunbright Gold is a proven variety for single stem cut flowers. The flowers are quite uniform in maturity and size.  
 1M @ \$22.00    5M @ \$19.25    25M @ \$18.33

**FULL SUN** *65 - 70 Days • #4421NT*

Full Sun is used for cut flowers in cooler weather in the South, where it matures predictably with low light. Pollenless. When grown in winter, stems are shorter but always long enough for a perfect, pollenless cut flower.  
 1M @ \$26.12    5M @ \$22.86    25M @ \$21.77

**GOLDY DOUBLE** *75 - 80 Days • #4158OR* **ORGANIC**

Goldy Double produces fully double "powder puff" flowers on "spray" type branched stems. It makes some of the nicest cut flowers of any branched variety in that the stems are long, strong and straight. The medium-tall plant, 6' to 7', is topped with an explosive jolt of gold in full bloom. Nearly pollenless flower start blooming with a greenish center.  
 1M @ \$ 21.60    5M @ \$18.90    25M @ \$18.00

**TEDDY BEAR** *75 - 80 Days • #6646NT*

Fantastic for potted plant sales or as a border, Teddy Bear has shaggy golden flowers on compact, 3' to 4' plants with dense large leaves. Despite the small size, it is late maturing.  
 1 oz. @ \$12.00    4 oz. @ \$8.80    1 lb. @ \$25.00    5 lb. @ \$22.00

**BLACK OIL** *90-110 Days • #5946NT*

An inexpensive variety to for Sunflower mazes and farm stand sales, plus sprouting. Makes a nice addition to sunflower mazes and also used for microgreens. Multibranching with flowers sized 4"-9". Gold flowers with brown center. Height 4 to 6 feet.  
 1 lb. @ \$9.81    25 lb. @ \$7.85

**WILDFLOWER BEE POLLINATOR MIX** *#8471NT*

Exclusively formulated to provide food and shelter for bees and other beneficial pollinators. Expect 2-4 years of blooms, after which weed competition may require additional sowing.

TEDDY BEAR^

GOLDY DOUBLE^

SUNBRIGHT SUPREME^

For most varieties, days to maturity and height are approximate and change with daylength.

**VISIT OUR WEBSITE WWW.SEEDWAY.COM FOR THE LATEST PRODUCTS, HIGHLIGHTS, AND SEEDWAY EXCLUSIVES!**

**HELP RESTORE NUTRIENTS. INCREASE YIELD POTENTIAL.** In addition to vegetable seeds, SEEDWAY also sells "farm seed": corn, soybeans, forages and small grains. Through this connection, we are able to offer cover crop seed to our vegetable grower customers. **Some of the cover crop seed is warehoused in our Elizabethtown, PA vegetable seed location.** The mixes and seed on the following page are warehoused at "farm seed" locations in PA, NY and VT. To purchase those seeds (that do not ship free unless you are near a warehouse) phone our Elizabethtown office at (800) 952-7333 or by phoning one of the SEEDWAY Sales Representatives listed on the inside cover.

→ SEEDWAY IS A FULL-LINE COVER CROP DISTRIBUTOR, CARRYING NOT ONLY INDIVIDUAL SPECIES, BUT PROVEN MIXTURES TO INCREASE YOUR SOIL HEALTH. ←

**ANNUAL RYEGRASS** **DH-3** diploid annual ryegrass was developed for quick establishment, excellent crown rust resistance, frost tolerance and high forage yield. DH-3 exhibits excellent seedling vigor, and medium maturity, allowing consistency in forage yield throughout the season with good transition back into warm-season forage grasses. **FR1A** is a late maturing, widely adapted annual ryegrass with excellent cold tolerance. Other benefits include improved disease resistance to Crown Rust, Gray Leaf Spot and Helminthosporium Leaf Spot.

**HAIRY VETCH** **Purple Bounty** is a new winter hardy, early maturing hairy vetch variety developed for high nitrogen fixation (up to ½ of a subsequent crop's nitrogen), increased biomass for a thicker mulch and earlier flowering for more flexibility in planting succeeding crops. Vetch forms ground cover slowly in the fall, but root development continues through the winter with substantial growth in the spring. For maximum results, Purple Bounty should be in full bloom to allow for peak nitrogen contribution and to mow, roll or spray for maximum vetch kill. Spring oats or winter grains can also be planted with Purple Bounty to act as a protective cover for improved winter survival and increased erosion control. Purple Bounty is an excellent cover crop for nitrogen fixation, erosion control, bio mass, and weed suppression.

**PHACELIA** Phacelia is a plant that is native to the United States, but was adopted and improved by Europeans for use as a cover crop. Phacelia is quick to establish and will winter kill at 18° F. Phacelia is an excellent source of high quality nectar and pollen resulting in increasing the population and diversity of beneficial insects. Phacelia will begin to flower 6-8 weeks after emergence and will continue to flower for 4-6 weeks. Phacelia is comparable to buckwheat in many ways, but is more tolerant to cold and drought. Phacelia can also be used for forage, as a green manure crop, nematode control, and a nitrogen trap crop.

**CRIMSON CLOVER** Crimson Clover has erect stems, grows quickly and has larger seeds than the more commonly used red clover. Crimson Clover's primary advantages are rapid growth during cool weather, shade tolerance and good reseeding potential. Crimson Clover can be planted in early spring or fall for weed control. Because of its shade tolerance and reseeding potential, crimson clover is also effective as a living ground cover in orchards. Crimson Clover has been used effectively to suppress weeds when planted in the early fall following a short-season crop such as potatoes, snap beans, vegetables or following winter wheat. Planting with a grass such as oats, which is also fast-growing, gives additional weed control in these situations.

**AUSTRIAN WINTER PEAS** Austrian Winter Peas are a cool-season, annual legume with good nitrogen-fixing capabilities. Austrian winter pea is a low-growing, viney legume which has been shown to fix over 200 lbs. of nitrogen per acre per year under good conditions. It has hollow, slender and succulent stems, 2 to 4 feet long. The foliage is pale green, and the flowers are colored, usually purple, pink or reddish. The leaf consists of one to three pairs of leaflets and terminal branched tendrils. Pods are 1.5 to 2.5 inches long with three to five round, dark-colored seeds. Seed color is commonly gray with purple or brown mottles.

**TRITICALE** Triticale is a hybrid small grain produced by crossing wheat with rye. The name "triticale" is derived from the combined scientific names of the two crop species wheat and rye. The versatility that triticale offers as a grain, a forage, for straw and as a cover crop adds to the economic viability that sustains the interest in the crop.

**OATS** Oats are very versatile as they can be planted at various times of the season and used as an excellent cover and forage crop. Oats work well alone, but especially well in mixes with radishes, turnips, berseem clover, crimson clover and Austrian winter peas. Oats perform well for erosion control and are very good nutrient scavengers. Oats (and mixes with radishes or turnips) work very well for manure nutrient management.

**BUCKWHEAT** Buckwheat, when used as a cover crop, can reduce both the emergence and growth of weeds, thereby presenting an easy and economical alternative to herbicides. Buckwheat, a short-duration broadleaved annual species which provides very effective weed suppression due to its rapid early growth that establishes a canopy faster than many weeds.

**CEREAL RYE** Cereal Rye is a fall planted, winterhardy species with deep root penetration. The extensive root system enables cereal rye to capture high levels of nitrogen and other nutrients from the soil and reduces soil compaction issues. Cereal Rye has the added benefit of late fall and early spring grazing as well as spring silage or hay.

**SUNN HEMP** Sunn Hemp is an excellent cover crop variety which produces large amounts of biomass through warmer conditions. Sunn Hemp will scavenge available nitrogen and will fix nitrogen levels when nitrogen is lost. Sunn Hemp will hold and produce sufficient nitrogen to provide nitrogen credit for the following crop.

**ECO-TILL™ RADISH** Strong tap root extends deep into the soil to provide a wide variety of benefits for next year's crop. The fine root portion of the tap root can extend 6' while the upper portion grows up to 24". This tap root system reduces soil compaction, provides aeration and water infiltration and returns nutrients to the soil surface. This system helps suppress weeds and builds organic matter. *Seeding Rate 10-15 lbs./acre broadcast • 8-10 lbs./acre Conventional or No-Till. AVAILABLE FOR PURCHASE ON SEEDWAY.COM.*

**CALIENTE 199** Caliente 199 Mustard Blend has been bred specifically for biofumigation and green manuring. The naturally occurring biofumigant gas (ITC) is produced by the plants when the crop is chopped, incorporating this compound and the green material into soil results in many benefits including improved soil structure, health and fertility, suppression of various soil-borne diseases and pests and increased soil microbial activity. *AVAILABLE FOR PURCHASE ON SEEDWAY.COM.*

**NEMAT / CALIENTE 199** An arugula/mustard blend for use as a nutrient crop and attractant for nematodes in IPM programs. Excellent green manure for combined nematode, disease and weed suppression. Can be seeded spring, summer and fall. The Nemat arugula is very cold tolerant, may over winter. Best results with good management, chopping, tillage and rotation. Seeding Rate: 6-8 lbs./acre *AVAILABLE FOR PURCHASE ON SEEDWAY.COM.*

SUNN HEMP^

ANNUAL RYEGRASS^

CRIMSON CLOVER^

HAIRY VETCH^

ECO-TILL™ RADISH^

**SW-PR** 25 lbs. per acre**80% Survivor Winter Pea • 20% Eco-Till™ Radish**

- Rapid establishment to prevent wind and water erosion.
- Fixes atmospheric nitrogen to increase soil nitrogen levels.
- Improves soil permeability for increased air and water penetration, reduces soil compaction, and increases root development potential.
- Recycles nutrients that would have been lost to leaching or runoff.
- Potential forage for fall grazing.

**SW-RYR** 25 lbs. per acre**80% Fria Annual Ryegrass • 20% Eco-Till™ Radish**

- Improves soil permeability for increased air and water penetration, reduces soil compaction, and increases root development potential.
- Recycles nutrients that would have been lost to leaching or runoff.
- Holds surface soil in place.
- Improves soil tilth which can benefit any crop that follows.
- Potential forage production for fall grazing.

**SW-RYC** 25 lbs. per acre**60% Fria Annual Ryegrass • 40% Crimson Clover**

- Rapid establishment to prevent wind and water erosion.
- Improves soil permeability for increased air and water penetration, reduces soil compaction and increases root development potential.
- Fixes atmospheric nitrogen to increase soil nitrogen levels.
- Potential forage for fall and spring grazing, spring silage or hay.

**SW-POR** 50 lbs. per acre**50% Survivor Winter Peas • 40% Jerry Oats • 10% Eco-Till™ Radish**

- Rapid establishment to prevent wind and water erosion.
- Improves soil permeability for increased air and water penetration, reduces soil compaction, and increases root development potential.
- Recycles nutrients that would have been lost to leaching or runoff.
- Fixes atmospheric nitrogen to increase soil nitrogen levels.
- Potential forage for fall and spring grazing, spring silage or hay.

**SW-TCR** 50 lbs. per acre**80% Triticale • 10% Crimson Clover • 10% Eco-Till™ Radish**

- Rapid establishment to prevent wind and water erosion.
- Recycles nutrients that would have been lost to leaching or runoff.
- Fixes atmospheric nitrogen to increase soil nitrogen levels.
- Improves soil permeability for increased air and water penetration, reduces soil compaction and increases root development potential.
- Best used prior to corn, wheat or other crops requiring significant nitrogen inputs.
- Potential forage for fall and spring grazing, spring silage or hay.

**SW-TRY** 100 lbs. per acre**80% Triticale • 20% Fria Annual Ryegrass**

- All grass mix.
- Excellent forage for fall and spring grazing.
- Improves soil tilth which can benefit any crop that follows.
- Rapid establishment to prevent wind and water erosion.

	TLS	Target Leaf Spot	Corynespora cassiicola
	WMV	Watermelon/mosaic virus	Watermelon mosaic virus
	ZYMV	Zucchini yellow mosaic virus	Zucchini yellow mosaic virus

HR - High Resistance. The plant can resist the growth, development or the damage cause by the pathogen.  
 IR - Intermediate Resistance. The plant will show fewer symptoms than a non-resistant or susceptible variety.

Abiotic (AB) - Physiological or environmental conditions that may cause a plant to express signs of stress or limits its growth or development.

Crop	Code	Disease	Cause	
Lettuce	Bl	Downy mildew	specified races to Bremia Letucae	
	LMV	Lettuce mosaic	Lettuce mosaic virus	
Melon	Ec	Powdery mildew	Erysiphe cichoracearum	
	Fom	Fusarium wilt	specified races of Fusarium oxysporum f. sp. melonis	
	Sf	Powdery mildew	specified races of Sphaerotheca fuliginea	
	Ag	Cotton aphid	Cotton aphid caused by Aphis gossypii	
Onion	S	Sulfur burn	Sulfur burn caused by the application of some sulfur-based pesticides	
	Foc	Basal rot	Fusarium oxysporum f. sp. cepae	
	Pt	Pink root	Pyenochaeta terrestris	
Pepper	Pd	Downy mildew	Peronospora destructor	
	CMV	Cucumber mosaic	Cucumber Mosaic virus
