

TROPICAL ORCHID FARM, INC.
Huelo, Maui

2013 ORCHID LIST

Dear Friends,

Here is our 2013 List of new hard-to-find, interesting, unusual, and proven species.

This short list is only a partial listing of all the plants that are available now on our website. Please check our website frequently to see more species as they are added www.tropicalorchidfarm.com. The website also will have "special offers" this year. Our laboratory operation is doing well and there are a lot of good species in there!

You can help us save time by ordering on-line. Or please call us Toll-Free at (866) 572-8569. You may also fax your order form to us at (808) 572-8917. You may print out an order form from the Ordering Page of the website, as well as download a PDF file of this List. Terms and shipping info on Page 16. For email inquiries please contact Kathy at kathy@tropicalorchidfarm.com It is a pleasure working with all of you! - Jeffrey Parker

MANY ADDITIONAL SPECIES ARE AVAILABLE ON OUR WEBSITE AND LOTS OF GORGEOUS PICTURES ARE THERE TOO!

* All plants are sent in-pot unless otherwise specified. Many of these items are limited, so please don't hesitate to mention specific substitutions.

TOF2766 Aerangis citrata.
Photo. Madagascar. One of our most successful species. Really rewarding. Dwarf epiphytic species is very floriferous. Multiple long sprays have numerous white or cream flowers. Beautiful foliage. Very adaptable species, as it is found from sea level up to 4900 ft. Grow shady. 2.00" pots B.S. \$15.00

TOF2820 Anacheilium sp 'Rare Nice' x self.
Colombia. Acquired as *A. wallisii*, but no such name exists. With its dark rich brown blotching overall, this may prove to be *A. elisae* or perhaps the dark form of *A. crassilabium*. Smallish plants have 10" erect spikes of several upside-down flowers. 2.50" pot \$10.00

- TOF2822 Angraecum longicalcar.**
Photo. Madagascar. Extraordinary species. One of the longest spur nectaries in the orchid kingdom accommodates the moth pollinator's 16" long tongue! Large plants have elegant spikes with up to 12 flowers each. Non-resupinate blossoms have showy waxy white lip and light green sepals - petals. The greenish spur hangs down beneath each flower 16 inches! "Conveys the impression of strength, viability, nobility, and grandeur, and in our opinion makes an ideal specimen plant." (Hillerman, 1986) Highly scented at night. Prefers brighter light. 3.50" pot \$15.00
- TOF2803 Anguloa clowesii 'Alex Didio' CCE/AOS x self.**
Photo. Colombia. The Tulip Orchid. Very large showy golden yellow tulip-like flowers emerge from base of pseudobulbs. Large soft leaves. This species is deciduous and leaves will drop off. 3.50" pots \$25.00
- TOF3058 Bletilla striata coeruleascens.**
Japan, China. Small to medium size cool-growing terrestrial with subterranean pseudobulbs. Unlike the typical species, these flowers are pale pink with darker pink areas. Somewhat "nodding" flowers. 2.5" pots B.S. \$10.00
- TOF2758 Bollea ecuadoriana.**
Photo. Ecuador. Two fine forms have been selected as parents. Fan-shaped growths lacking pseudobulbs produce single-flowered inflorescences from the leaf axils. Blooms are a very unusual and beautiful shade of dark pink. Contrasting bright yellow band across lip. This member of the Bollea/Pescatorea family is really great because its flowers display well (unlike some others in the family) Water year round. 5.00" pots B.S. \$20.00
- TD223 Bulbophyllum ambrosia.**
Photo. Medium size clumping plants produce 1 1/4" flowers singly which have a sweet honey-like fragrance. Fully opening flowers are white with pink stripes and margins. 3.50" pots B.S. \$15.00
- TD231 Bulbophyllum annandalei.**
Photo. Thailand, Malaysia. Fantastic small Cirrhopetalum species with up to 9 wide flowers on an umbel. We have several different cultivars; this one has greenish-yellow flowers with red stripes on the insides of the sepals and crazy red fringes on the petals and dorsal sepal. Was very rare until 1985 when it was rediscovered in the Malaysian Genting Highlands. 5.00" pot B.S. \$30.00
- TD287 Bulbophyllum brienianum.**
Kalimantan, Borneo. (Syn. Cirrhopetalum makoyanum var. brienianum) Compact bulbs, 3/4" apart on the rhizome. Spike to 10" long with 8 lovely flowers – very narrow flowers in the manner of B. makoyanum. Pale yellow, purple towards the base with a purple lip. A favorite of mine. 3.00" pots B.S. \$20.00
- TD163 Bulbophyllum dearei.**
Borneo through Philippines. Nice species from the section Sestochilus. Good-size yellow flowers with orange reticulations marked with some purple - dorsal sepal curves forward over the labellum. Often found growing on the bare trunks of large trees. 5.00" pots B.S. \$25.00
- TD342 Bulbophyllum eberhardtii.**
Assam, Burma, Thailand, Vietnam. Another very showy Cirrhopetalum type with sometimes up to 16 bulbous flowers, sepals covered with red mottling. Glossy red lip and petals. Awesome antenna at top of dorsal sepal. Said to be a synonym of B. picturatum, but to me that is completely different. Please check Jay's website or Google images for a picture of B. eberhardtii. 6" pot B.S. \$30.00
- TD65 Bulbophyllum ecornutum.**
Java through Borneo. Section Sestochilus. Very interesting 1 1/4" flowers are borne singly from clumpy plants. Yellow, heavily spotted with crimson and a red lip. The lip is lightly hinged so that it can move in all directions (not only up and down as with most bulbophyllums). 3.50" pot B.S. \$15.00
- TD278 Bulbophyllum ecornutum var. semi alba.**
Rare color form – all yellow with the strange purple mobile lip. (Pictured at Jays' Internet Orchid Species Encyclopedia.) Very interesting 1 1/4" flowers are borne singly from clumpy plants. The lip is lightly hinged so that it can move in all directions. Nice clumpy blooming size plants! Recommended. 3.50" pot B.S. \$15.00
- TD242 Bulbophyllum elassoglossum.**
Philippines. Described in only 2001 by Seigerist. Plants have a creeping habit. Fairly large (1 1/4") beautiful flowers in this special clone. Golden yellow with purple-red spots and blotches against white. Flowers open and close for days on end, opening before sunrise and closing by mid-morning. Not available in the U.S. market. 3.50" pots B.S. \$18.00

- TD297** **Bulbophyllum Emily Siegerist 'A-Doribil 52'**.
(*Bulbophyllum* Elizabeth Ann x *Bulb. lasiochilum*) Large lasiochilum-looking flowers - much shorter than Elizabeth Ann but much longer than lasiochilum. These cream-colored flowers have a lot of dark red spots and black-red dorsals. Small plants, large flowers. Easy, rewarding. 3.50" pot B.S. \$16.00
- TD295** **Bulbophyllum mirum**.
Photo. Java. (*Rhytionanthos mirum*) *Rhytionanthos* means "small drinking horn". Really cute small plants have short spikes with two 1 1/4" narrow tubular flowers. These appear to be brick red although they are really white covered with red dots. The minute petals have many "palae" or tentacles. 3.50" pots B.S. \$18.00
- TD271** **Bulbophyllum orientale**.
Vietnam.
Section *Careyana*. Medium sized epiphyte in savannah semi-deciduous woodlands - described in 1979. Densely many-flowered 6" inflorescence held below the leaves - 1/2" flowers are a rich copper color with reddish veining. Plants have attractive purplish foliage. Vigorous. 5.00" pot B.S. \$20.00
- TD392** **Bulbophyllum oxypterum**.
Africa. Synonyms are *Megaclinium oxypterum* and *Megaclinium maximum*. Nice-growing plants put up a 20" inflorescence, wide and flattened towards the top, which has small 1/4" flowers "stuck to its sides". Tiny flowers are amazing, and open successively over a period of time. Yellow with red-purple markings. This was a sensation when I took it to our local society meeting. 6.00" pot B. S. \$45.00
- TD386** **Bulbophyllum rothschildianum 'Geoff'**.
Photo of 'Red Chimney' in our website gallery. China, India, Assam. Another less-common variety of the fantastically showy red-purple flowered *B. roth.* Different from 'Red Chimney' - perhaps fuller segments and slightly different colors. The species was found in a box of nearly dead orchids arriving in England in 1892, said to be found in the hills above Darjeeling. The plants were sent on to Lord Rothschild and flowered in 1895. (From the *Orchid Review* Dec. 1922 and featured in Bill Thom's fascinating and entertaining book '*Bulbophyllum - The Incomplete Guide; From A To Why?*') 5.00" pot B.S. \$70.00
- TD18** **Bulbophyllum saurocephalum**.
Photo. Philippines. Easy-growing plants have very weird fat, round, purple pendant spikes, with small reddish purple flowers "stuck" to their surfaces. Strange and interesting. 5.00" pots B.S. \$18.00
- TD300** **Bulbophyllum smitinandii**.
Thailand, Vietnam. This epiphyte has large (2") showy flowers held erect singly. Background color is gold, petals have reddish striping, the wide dorsal is tessellated with red, and the lateral sepals have bolder red-purple striping. Lip is violet. Only described in 1996, not a lot of information is available. Named to honor Tem Smitinand, Keeper of the Thailand Forest Herbarium. 5.00" pot B.S. \$28.00
- TD209** **Bulbophyllum sp. 'Rosary Beads'**.
Malaysia. Very small clumping plants have little round pseudobulbs strung along a thin rhizome reminiscent of prayer beads. Numerous small flowers are dark yellow with elongated sepals. Very cute. 2.00" pot \$8.00
- TOF2075** **Bulbophyllum strangularium**.
Sumatra through Moluccas. Large umbels of long cream and purple-spotted flowers - nice foliage too. Attractive plants. 5.00" pot B. S. \$18.00
- TOF2936** **Cattleya bowringiana 'One In a Million' JC/AOS x self**.
Photo. Belize - Guatemala. An amazing new color form, recognized with a Judges Commendation. Each erect spike has many 3" flowers, which are a very unusual pale pink (almost white) with a striking magenta halo in the lip. 2.5" pot \$10.00
- TOF2814** **Cattleya dowiana v. aurea 'Miami Strain' x self**.
Colombia. Best *C. aurea* in our collection nowadays. Rich yellow with red veined lip. Super nice "flat" flowers - no color bleeding in the mother plant. 3.00" pot \$12.00
- TOF2710** **Cattleya gaskelliana 'Sr. Npod' x self**.
Venezuela. Nice lavender color form with good form and wide petals - nice strong lip color. 3.50" pot \$16.00 3.00" pot \$10
- TOF2727** **Cattleya gaskelliana 'TOF943' x sib 'Sr. Npod'**.
Venezuela. This is our very prolific *C. gaskelliana* Tipo (typical) *gaskelliana* crossed with another beautiful cultivar from Venezuela growers - *C. gaskelliana* var. *gaskelliana*. Typical colors, various shades of light to darker lavender, with dark lavender on lip. Should perform exceptionally well. Huge specimen bloomings are easy with this variety. 3.50" pots B.S. \$18.00

- TOF2875 *Cattleya gaskelliana* var. color.**
Venezuela. This has more brilliant colors than the normal *C. gaskelliana* var. *gaskelliana*. It is a selfing of a sib-cross, 'Black Tiger' x 'Jazmin'. Vigorous species makes huge specimen plants – blooming with many sprays of 2-7 large showy fragrant flowers. 3.00" pot \$12.00
- TOF2711 *Cattleya gaskelliana* var. semi alba x self.**
Photo. Venezuela. The easiest and most prolific, floriferous Catt species. Selfing of the semi-alba parent, white with lavender area on lip. Hoping for more good semi-albas. (The parent is a cross of 'Maruja' x 'Red Flame' – you can find photos of those on the Internet)
3" pots \$10.00 3.50" pot \$15.00
- TOF2837 *Cattleya gaskelliana* v. alba x *Schomburgkia superbiens* alba.**
Ha ha. We like Schombocattleyas (I hope many of you got our Schombocattleya Louise Fuchs for example) this one tries for white flowers with the beautiful crisped edges of the Schomburgkia but without the very long inflorescence. White color is not for certain. Something new for the orchid show or the display table at society meetings. 3.00" pot \$10.00
- TOF2729 *Cattleya Hardyana* (C. warscewiczii 'Flatlands' x *Cattleya dowiana aurea* 'Best').**
If you are a fan of our Hardyana's – you will want to get this one. The warscewiczii used is uncommonly large and flat. The aurea is the best in our collection. "The early orchid fanciers considered this *Cattleya* to be one of the finest and grandest." (Withner)
3.00" pot \$10.00
- TOF2606 *Cattleya Hardyana* (C. warscewiczii 'F.M.B.' x C. dowiana.)**
Photo. This bloomed for the first time this year – really beautiful semi-alba's result. Here we have used the old famous warscewiczii 'Frau Melanie Beyrodt' a spectacular semi-alba. The dowiana used is a typical form. (Should mention that C. Hardyana is found in nature as a natural hybrid) 3.50" pots N.B.S. \$15.00
- TOF2609 *Cattleya Hardyana* (C. warscewiczii s/a 'F.M.B.' x C. dowiana 'Rosita').**
This differs from the above TOF2606 in that the dowiana used is the Rosita (reddish) form. (So far, mostly semi-albas resulted in this one also). 3.50" pots \$15.00
- TOF2835 C. jenmanii var. coerulea x C. bowringiana var. coerulea 'Mikes'**
I made this thinking that it could be like a modern C. Portia – blooming in the fall around our show date. In the old days, C. Portia was a dependable and dramatic show stopping plant. Many flowers on a spray, "large" compared to C. bowringiana flowers. Blue color may or may not come out – if not, then lavender. Large in 3.50" pots \$12.00 3.00" pot \$9.00
- TOF2838 *Cattleya labiata coerulea* 'Natural World' AM/AOS x self.**
Photo. Brazil. Fantastic plant – one of the best in our collection. Vigorous good-growing plant has several large quality flowers in the "blue" shades. Blue-purple lip. Labiata is one of our most important species for Fall blooming and this is our best one.
3.50" pots \$35.00
- TOF2763 *Cattleya labiata* var. rubra 'Schuller' x self**
Photo. Brazil. Famous cultivar used. Probably the best rubra form found in nature. The red-lavender color is darker overall than the typical labiatas. Also the lip is dark lavender – without the white eyes of the typical forms. 3.50" pots \$15.00
- TOF2799 *Cattleya lawrenceana* var. concolor 'Natural World' x self.**
Photo. Venezuela. Very rare and beautiful form of this most atypical *Cattleya* species is not available in the market. Flowers are a soft pink color all over, unlike the typical forms that are pink with lavender tube. C. lawrenceana is not typical of other labiate cattleyas, with its tall slender bulbs, and many flowers with the tube-like lips. Some albas could also result from this selfing, which would be wonderful and amazing.
3.00" pot \$20.00
- TOF2790 *Cattleya lueddemanniana* 'T.O.F. Strain' x sib (Cecelia x Jose Palmieri).**
Photo. Venezuela. This should be good. Our T.O.F. strain really performs well and has large light-colored flowers. The other plant has good quality rich dark lavender flowers. Cecilia is a famous plant considered one of the best "purple" varieties. It has wide rich lavender petals and a darker lip accentuated by bright yellow side lobes. (Pictured on page 86 of Aulisi's '*Monography of the Venezuelan Cattleyas*')
3.50" pot N.B.S. \$15.00
- TOF2747 *Cattleya mendelii* semi-alba x self.**
Colombia. Warm to cool growing medium size epiphyte growing on rock outcroppings. Spring bloomer with 3 to 5 long-lived 6 inch fragrant flowers that open well.
3.00" pot \$12.00
- TOF2904 *Cattleya skinneri* f. delicata 'Teresita de Pizzaro' x self.**
Central America. A special color form with clusters of beautiful white flowers with a pale pink blush, darker pink on the lip apex, and yellow in the throat. Very nice. Recommended. 3.00" pot \$8.00

- TOF2715 *Cattleya warneri coerulea* 'Do Suzuki' x self.**
Brazil. Another fantastic cultivar. Beautiful, flat full-shaped labiate *Cattleya*. This named variety differs from our TOF2431 with wider petals and darker purple lip color. Good light purple blue petals, and dark purple blue lip. Good easy growth as well.
3.50" pots \$22.00
- TOF2924 *Cattleya warscewiczii* 'Alexander's Variety' x sib.**
Photo. Colombia. (*Cattleya gigas* – the "King of the *Cattleyas*") 'Kathleen' is a fine awarded example of this Colombian *Cattleya* species. *Warscewiczii* is perhaps our favorite, and it is the most popular with our customers too. This new crop of beautiful plants is a sib-cross of 'Kathleen' and the old famous large-flowered cultivar 'Alexander's Variety'. 'It's flowers being amongst the largest and the most beautiful coloured...' (*B.S. Williams, The Orchid Growers Manual, London, 1885*)
3.00" pot \$15.00
- TD243 *Cirrhopetalum* sp. 'Jeff's Favorite'.**
Photo. Palau, Philippines.
This is my favorite *Cirrhopetalum* in our pretty big collection. Beautiful whorls of delicate narrow flowers with wonderful intense clear yellow color. But also, the way in which a specimen orients its many umbels is very eye-catching. 5.00" pot B.S. \$20.00
- TD11 *Coelogyne fimbriata* 'Mini'.**
Sumatra. Variable species - this one has small growth habit and is vigorous and mat-forming. Many single *Coelogyne*-type flowers are large for plant size, beige with "blackish" markings. Interesting and rewarding. 3.50" pot \$12.00 B.S.
- TOF2957 *Coryanthes gertonii* 'Ponche Crema 2' x self.**
Venezuela. This is a special form of the bucket-orchid *C. gertonii* – nicer colors than our previous typical *gertonii*. The smallest flowers are orangey – offset by a sparkling white hypochile. Amazing. 3.00" pot \$18.00
- TOF2961 *Coryanthes fieldingii*.**
Venezuela. Uncommon in the market. (It's kind of a joke to have said that, since ALL *Coryanthes* are uncommon in the market!) Yellow-orange bucket is white inside with purple spots. Large white hypochile.
2.00" pot \$12.00
- TOF3023 *Cymbidiella pardalina*.**
Photo. Madagascar. (Syn. *C. rhodochila*). Larger, warm-growing strap-leaved plants produce sprays of very showy green flowers with striking red lip. Unusual and fairly long-lasting. 3.00" pot \$15.00

- TD321 *Cynorkis gibbosa*.**
Photo. Madagascar. A really special and elite terrestrial species, found growing in humid and shady conditions along streams on granite boulders. Nice mottled foliage. It is deciduous and lives underground part of the year – but is amazingly easy to grow. Very striking heads of cinnabar red and orange flowers. Some plants are just beginning to pop up right now – availability depends on the growth being up enough for us to ship it. Our little secret: we've discovered that *Cynorkis* aren't as nearly as seasonal as *Habenarias* – they can put up growths at any time of year!
3.50" pot B.S. \$75.00
- TD308 *Cynorkis guttata*.**
Photo. Madagascar. (Previously sold as *Cynorkis uncinata*) Fabulous terrestrial orchid – and this is the special color form with bright two-tone colors. This plant is a terrestrial and that is how we are very successfully growing it. Plant dies back after flowering. Later, lush new growths come up quickly and put out an erect spike with a large umbel-like head of many (up to 30) beautiful good-size flowers which are light pink with red dots and bright red centers. Really magnificent and easy to grow. Interestingly, unlike say, our *Habenaria rhodochela*, these plants seem to send up new growths and flowers at any time of the year! Rare opportunity.
5.00" pot B.S. \$30.00
- TOF2743 *Dendrobium alexandrae*.**
Photo. New Guinea. Latourea section. Epiphytic on moss-covered branches in intermediate rainforest. "This magnificent species represents the first close relative of *Den. spectabile*, but it differs completely in the labellum." (Schlechter, 1912) Schlechter dedicated this species to his wife, Alexandra. The basic color is yellow with purplish spots – with a long pointed lip almost covered by red-brown tessellations. One of the most worthwhile *Latoureas*.
3.00" pot \$15.00
- TOF2954 *Dendrobium antennatum* 'd'albertisii'.**
Photo. Very compact for an antelope-type *Dendrobium*. Flowers often during the year. Long-lasting 3.00" white flowers have green many-twisted spiral petals. Lip heavily marked with lavender veining. Fragrant. Very good species – grow it into an amazing flowering specimen plant!. 3.00" pot \$10.00 (these small plants are capable of blooming)

TOF2742 Dendrobium atrovioleaceum x sib.

Photo. New Guinea. We still have our old T.O.F. mother plants which are superior to what we see in the market. Section Latourea. These "latoureas" offer showiness, ease of culture, resistance to rainfall & over watering, near-continuous flowering, and extremely long-lasting flowers! Many cream or white flowers with violet spots and heavy violet veining in lip. This batch blooming on really short compact plants. 3.50" pots B.S. \$12.00

TOF2769 Dendrobium convolutum.

New Guinea. Some species prove themselves with the test of time. Continues to thrive and flower all the time in our nursery over the decades. Many short sprays of flowers which are extremely long-lasting. Green sepals and petals with a dark purplish striped lip. Fairly common in Hawaii 20 years ago, but not seen too much today. Nice plants in 3.00" pots N.B.S. \$12.00

TOF2690 Dendrobium glomeratum.

Photo. New Guinea and the Molucca Islands. (Den. sulawesiense). Like a giant Den. lawesii - with canes from 10" to 20" long. Large, very bright pink long-lasting flowers are borne 6-10 per inflorescence. Orange lip. Grow with brighter light. Really perhaps the best Dendrobium species we've ever grown - because of its extremely showy long-lasting displays and its free-blooming habit. Very few people who see this in flower at our nursery leave without it. Recommended.

Large N.B.S. in 2.00" pots \$16.00

TOF2869 Dendrobium lawesii 'Purple x Red.'

Photo. New Guinea. Section Calypstrochilus. Colorful red or purple tubular flowers emerge from nodes on the pendulous canes. Very long lasting (months!). Low epiphyte in nature, in shade. Highly variable flowers that occur at most any time of the year. This plant is best mounted on tree fern or grown in baskets to accommodate the pendant growth habit.

2.00" pot N.B.S. \$12.00

TOF2713 Dendrobium palpebrae "#1" x sib.

Photo. Malaya. (Synonyms: Den. farmeri var. album, Callista palpebrae.) Section Callista. Really fabulous! Huge sprays. Apparently this is often confused with D. farmeri. White velvety flowers have brilliant yellow-gold lips with white margins.

3.00" pot \$14.00

TOF2746 Dendrobium polysema 'Original' x self.

Photo. Papua New Guinea. Most dramatic in the Latourea section. Grows in areas of high rainfall and warm to intermediate temperatures. Very colorful in comparison to

other Latourea species. Up to 25 bizarre flowers per erect inflorescence. Plants do get fairly large but the pseudobulbs are closely spaced. Long-lasting and the flowering season in nature is year-round. Big plants in 3.50" pots B.S. \$15.00

TD265 Dendrobium reflexitepalum.

Borneo. Hot-growing epiphyte with flat braided leaves. Short inflorescences have several small 1/4" flowers - very attractive rose-pink coloration in this special cultivar. If plants are grown with stronger light, the foliage takes on a reddish color (we've grown them both shady and bright). 2.00" net pot B.S. \$15.00

TD370 Dendrobium toressae.

Photo. Northern Queensland, Australia. Miniature dense clumping epiphyte has small yellow flowers. Unbelievable plant with very crisp foliage. Cute little clumps on 2.5" tree-fern mounts. Very very limited. B.S. \$28.00

TOF2847 Dendrobium woodsii.

New Guinea. New Latourea species is quite compact. Each growth gets a pendulous inflorescence with 4 -7 small (3/4") flowers. Color is white with a relatively-large mauve-pink lip. (Actually this batch is coming out with unusually darker, rich colored lips). Fragrant. Recommended.

2.00" pots N.B.S. \$12.00

TD181 Dendrochilum curranii.

Philippines. Small-growing species from Luzon and Mindoro Islands. Many sprays of around 50 cream-white closely spaced flowers. Very attractive. Warm to intermediate. 3.00" pot \$15.00

TOF2895 Dendrochilum propinquum.

Philippines. Small plants with attractive spiraling pendant sprays. Many closely spaced flowers are greenish yellow with yellow-orange lips. I don't know how big this species gets, but right now some are blooming at a miniature size.

2.50" pot B.S. \$15.00

TOF2882 Encyclia ceratistes x self.

Photo. Costa Rica. Attractive species has 2" flat flowers on long branching many-flowered inflorescences. Apple green. Lip is cream with raised red-purple veins in midlobe. Long-lasting. "...beautiful little species.....a delightful plant" (*Rebecca Northen, 1950*). 2.00" pot \$10.00

- TOF2821 Encyclia profusa.**
Colombia. (Enc. oncioides var. profusa) really one of the greatest Encyclias. Warm to hot growing epiphyte has long many-flowered branched inflorescences of 1 ¼" fragrant flowers. Yellow green with a nice white lip that has purple markings. Looks like a cloud of flowers. 2.00" pot \$10.00
- TOF2683 Epicattleya Francis Dyer 'Foxes Plum' x C gaskelliana var. coerulea.**
Here we wanted to do something with one of the most popular plants in our nursery – Epicat Frances Dyer 'Foxes Plum' AM/AOS (Cattleya bowringiana x Epi. fragrans) – given to us by one of our customers. It has up to 10 plum-colored non-resupinate flowers per spike. Really wonderful plant shows signs of "blue" blood with its plum color, so we used it with one of our coerulea gaskellianas. Some of these have bloomed and had beautifully-shaped rose-purple flowers. 3.50" pots B.S. \$12.00
- TOF3019 Epidendrum jasminosum x sib.**
Photo. New species (2005) is a hot-warm growing large epiphyte with magnificent large branched sprays of up to 150 white flowers. Supposedly fragrant (the Jasmine-Scented Epidendrum) - we have not actually noticed this but perhaps. You should see the plant I have growing on a Manila Palm! Blooms all the time. 3.00" pot \$15.00
- TD217 Epidendrum longirepens.**
Peru. "The Far Crawling Epidendrum". Miniature mat-forming plants with plump rigid foliage. (In the habit of our previous Epi. congestioides). Many greenish waxy flowers have a red suffusion. Very nice, quality species. Nice clumpy plants. 3.00" empty pot (no media) B.S. \$15.00
- TOF2836 Epidendrum parkinsonianum.**
Mexico. (Coilostylis parkinsonianum). One of the greats. Plants have a pendulous growth habit and should be grown in a hanging position. Each spike has 1 to 3 large, long lasting, flowers which open all at once. Night fragrant (of citrus) flowers are bronzy or greenish with a large prominent white lip with yellow in center. Largest flower in genus. Recommended. 3.50" pots \$15.00
- TOF3046 Epidendrum Plastic Doll.**
Photo. (Epi. ilense x Epi. pseudoepidendrum) A favorite in my collection - old famous hybrid with pendant sprays of several huge (for genus) showy flowers. Variation in colors, but generally green sepals and petals with a wide yellow lip, offset by beautiful red or lavender on column. Plants have reddish foliage. 3.00" pot N.B.S. \$10.00
- TOF2859 Epidendrum ruizianum.**
Colombia. Robust terrestrial or epiphyte found on rocky slopes, usually in full sunlight. Several panicles hang down with many crowded orangey-green flowers with white tri-lobed lip. Fragrant. Will be a very dramatic specimen. 3.50" pots \$15.00
- TOF3112 Eurychone rothschildiana x self.**
Photo. West Africa. Small shady moist growing epiphytes have clusters of interesting white flowers suffused with brilliant green areas. Attractive plants resemble Phalaenopsis, but with wavy edged leaves. Cute seedlings. 2.00" pot 4+" leaf span. \$12.00
- TOF3034 Gongora bufonia x self.**
Brazil. I didn't realize at first how dramatic this species is. Medium size epiphyte puts out tremendous displays of many 2" flowers on long pendant sprays. Rows of pinkish spots over a pale background. 3.00" pot \$15.00
- TOF3030 Gongora scaphephorous 'Original' x self.**
Photo. Colombia. Outrageous species! Extremely showy pendant sprays can reach 3 feet in length, each with up to 50 flowers. Warm or temperate growing in very wet montane forest below 3000 ft. Later, you will want to transfer to a basket or a slab mount to accommodate pendant bloomings. 3.50" pot \$15.00
- TOF2940 Gongora similis x self.**
Colombia. Lower eastern slopes of the Andes. Warm growing. Many flowers on pendant sprays are yellow with red spotting. In Gongora similis, the pseudobulbs can produce up to six inflorescences in succession. 3.50" pot \$15.00
- TOF2753 Grammatophyllum speciosa 'Natural World'.**
Philippines through New Guinea. Actually the 'Natural World', the giant plant in our "botanical garden" died several years ago after it was blown down by a big storm – so this will be the last batch of seedlings for a while. "This is perhaps the largest of all orchid species..." (Seidenfaden, Wood, 1992) Pseudobulbs reach 9 ft in length, 21 ft in some extreme cases! Flower spikes to 6 or 7 ft. with many 4" showy flowers that last well. Yellow with chestnut blotches all over. This beautiful cultivar has a contrasting solid red lip. These large seedlings will take a long time to reach blooming, but we know some of you would like to get started now. 3.50" pot \$15.00

- TOF2709 Koellensteinia ionoptera.**
Photo. Really excited about this new very showy Koellensteinia. Taller growth than in our previous Koellensteinia graminea. Tall erect spike has 8 to 12 beautiful white flowers with concentric purple-pink markings. 3.00" pots B.S. \$15.00
- TOF2728 Laelia dayana coerulea x self.**
Photo. Brazil. Rarest form of this not-so-common Hadrolaelia. Laelia dayana is found growing on lichen-covered trees in the Organ Mountains. Small clumping plants produce large (3") flowers, one or two per stem. The coerulea color is coming out true as these seedlings bloom. Pale bluish white sepals and petals with rich blue-purple striated lip. Rare opportunity. 3.00" pots B.S. \$28.00
- TOF2788 Laelia purpurata var. carnea 'S.A. seedling 91006' x sib**
Photo. Brazil. New blood. The famous variety with the coral-pink colored lip. Quality parents. 3.50" pots \$12.00
- TOF2695 Laelia purpurata (Dante Vignota x Doraci) x self.**
Brazil. Unusual purpurata has striations on the petals and the lavender lip – many compact frilly flowers. 3.50" pots N.B.S. \$15.00
- TD138 Lepanthopsis astrophora 'Stalky'.**
Photo. Venezuela. Another of my favorite pleuro's. Many spikes shoot out of miniature clumpy plants. Tiny star-shaped flowers are a beautiful clear wine-purple color. Easily grow it into a specimen - really nice. Very floriferous! 1.00" pots B.S. \$10.00
- TOF2912 Liparis grossa 'Natural World' x self.**
Photo. Taiwan and Philippines. "The Compact Liparis". Very worthwhile! Truly cute small compact plants put up several erect spikes with many reddish-orange flowers which last. Very attractive miniature pot-plant! Recommended. 3.00" pots B.S. \$10.00
- TD268 Masdevallia attenuata.**
Panama. Small warm to cool growing epiphyte. Single flowers on 3" long inflorescence. Waxy 1" white long-lasting flowers with bright yellow tails. Yellow radiating lines in the tube of the flower. Very good species. 2.00" pots B.S. \$18.00
- TOF1496 Masdevallia auropurpurea.**
Photo. Colombia. Really nice small species. This is a red flower with yellow dorsal and yellow reflexed tails. Many or several flowers are displayed nicely, close to the plant. 2.00" pots B.S. \$12.00
- TD263 Masdevallia floribunda 'Maj' x self (Pink).**
Photo. Costa Rica. Miniature tufted epiphytic species with attractive ¾" pink flowers. Warm tolerant. 2.00" pot B.S. \$18
- TOF2809 Masdevallia nicaraguae x self.**
Photo. Central America. Neat small species has several to many unusual white flowers with faint to distinct purple streaks in the throat. Nice floral display. 2.00" pot B.S. \$16.00
- TD385 Maxillaria costaricensis 'Different'.**
Costa Rica. Really sweet small-sized clumping epiphyte has numerous small deep yellow flowers covered with a reddish suffusion. Fragrant. 3.00" pot B.S. \$12.00
- TD195 Maxillaria elatior.**
Belize. Divisions. Huge specimen produced stunning displays of hundreds of large (2") orange-red flowers 2 or 3 times a year. Prefers bright light. Large plant. A great landscaping plant where climate permits. 6.00" pot B.S. \$28.00
- TOF2843 Maxillaria endresii.**
Photo. Panama. Showy, warm-growing. Numerous large (3 inch) bright yellow spidery flowers singly on erect spikes have red in center of flower. 3.50" pot \$18.00
- TD277 Maxillaria hedwigiae.**
Costa Rica. Medium size warm-growing epiphyte. Short 3" erect spikes arising from the base of the roundish pseudobulbs carry single whitish flowers offset by beautifully-colored orange lips. 3.50" pot B.S. \$18.00
- TOF2249 Maxillaria huntii.**
Peru. New species just described in July 2008. Very interesting smaller plants with terete growth and pendant habit. 1.5" flowers are borne singly on short scapes and are orange with dark maroon markings in lip. Cutting edge! 2.50" pot N.B.S. \$15
- TOF2864 Maxillaria lankesteri.**
Photo. Costa Rica. Odd little plants with smaller branching habit. Really sweet flowers are quite striking - boldly striped with red-brown. Lip is variable - some red with stripes others greenish with stripes. Not normally found in U.S. market. New batch. 2.00" pot B.S. \$12.00
- TOF2889 Maxillaria triloris x self.**
Photo. Ecuador. Unbelievable species (does eventually get pretty large). In this variety the large flowers (4 inches) are yellow with red on sepals and petals. Can have a lot of flowers, singly-borne on erect spikes. 3.00" pot \$15.00

- TOF2465 Maxillaria uncata 'Lineas Rojas'.**
Costa Rica. Small "miniature" epiphyte has a nice habit – clumping with narrow spiky leaves. Numerous small (1/2") flowers peak out from the foliage. Cream with the lineas rojas – red stripes. Cute, easy.
2.00" pot B.S. \$12.00
- TD85 Mediocalcar decoratum.**
Photo. Papua New Guinea. Fabulous genus - 53 species have been described from mountainous New Guinea, but perhaps this should be reduced to less than 15. Small creeping or clumping epiphytes with many small colorful bell-shaped flowers. This one has orange blooms with yellow tips, like candy corn. *M. decoratum* is apparently from a little lower elevation and warmer-tolerant, so grows very well. Specimens rapidly.
2.00" pot \$10.00 B.S.
- TOF2860 Neofinetia falcata.**
Japan, Korea. In Japan this species is known as the "fu-ran plant and was considered sacred by the Samurai class." Vandaceous - small clumping fan-shaped epiphytes have heads of beautiful pure white flowers with long nectary spurs hanging down from each. Nice fragrance.
2" empty net pot \$15.00
- TOF2902 Oeceoclades monophylla 'Bronze Leaf'.**
Widespread to Mauritius. (*O. monophylla* is a synonym for *O. maculata*, but I am using this name because this is so different from the regular *O. maculata*) Small terrestrial plants are grown mostly for their very unusual foliage – pinkish bronze with green mottling. Small flowers on erect spikes **(they DO self-pollinate and produce seed capsules on their own** – this is a warning to those of you who cannot tolerate this) Interesting new item – I am looking forward to selling it at my show in October.
2.00" pot N.B.S. \$8.00
- TOF2929 Oeoniella polystachys.**
Photo. Eastern Madagascar, Comoros, Seychelles. Hot lowlands. Angraecoid. This is a lot of fun. Smallish erect plants produce multiple spikes of many small white flowers accented with lime-green and a beautiful, ultra-round pure white lip. Pleasing nocturnal fragrance. Easy, rewarding.
2.00" pot \$10.00
- TOF3006 Oerstedella pseudoschumanniana x self.**
Photo. Panama. Simple cane-like stems. Really unbelievable "blue" colors, overlaid with orange-brown on the sepals and petals. Very showy sprays of many simultaneous fragrant flowers. If you've never seen the flowers, it is quite amazing. 3.50" pot \$12

- TOF2780 Oncidium phymatochilum.**
Rare in Mexico, Guatemala. Truly one of the greatest and most unique orchids – a golden oldie from the past. Not found in the market much simply because it is very difficult to set seed. "This is a species which ought to be in every collection" (The Orchid Growers Manual, 1885) Large flat leathery pseudobulbs topped by a single leathery leaf. Many curious small twisted Brassia-like flowers on branched panicles are white, yellow and red-brown. Recommended – great deal! 3.50" pot B.S. \$15.00
- IK1703 Paphiopedilum delenatii v. alba HCC/AOS x self.**
Photo. Vietnam. Rare and beautiful form of this small sized lithophytic species with attractive mottled leaves. Large glistening white flowers with bulbous pouch and yellow staminode arise on erect spikes.
2.50" pot N.B.S. \$25.00
- TOF2934 Phaius tankervilleae 'Café Au Lait' x self.**
Photo. Malaysia. Large warm-growing terrestrial is pretty widespread. This Malaysian cultivar has special colors. Tall erect spikes carry many successively-opening 4 1/2" flowers. Easy to grow. I read that Papua New Guinea natives eat the smoked flowers as a contraceptive.
3.00" pots \$10.00
- TOF2607 Phalaenopsis equestris.**
Philippines. Sweet little plants have very beautiful and colorful flowers – two tone white with dark pink. Long-lasting.
2.00" pot \$10.00
- TOF1724 Phalaenopsis gigantea.**
Borneo. We've been working on these slow-growing plants for a long time. Plants eventually "massive" with leaves to 27 inches in length, "elephant ears" to the Borneans. Huge panicles of 2" round showy waxy flowers – background color white or yellow with covered with brown-red transverse bars. White lip has purple longitudinal lines. Plants are growing nicely in heavy shade –but later they will want more light to flower. Very limited.
4.00" pots (9 inch leaf span) \$60.00

- TOF2589 Phalaenopsis maculata.**
Malaysia, Indonesia. Miniature epiphyte or lithophyte from sea level up to 3000 ft. Its name in the Malay language, *kupu-kupu batu*, means "rock butterfly". Very interesting species with many beautiful small flowers with substance are white or off-white with intense red transverse bars and a scarlet lip. (This clone has particularly intense red markings, like the special clone shown in Eric Christensen's 'Phalaenopsis – a Monograph') Small plants with only a 4" leaf span in 2.00" pots are N.B.S. \$18.00 Rare opportunity!
- TOF2599 Phalaenopsis stuartiana.**
Photo. Southern Mindanao, Philippines. Epiphyte at low elevations up to 900 feet (Warm growing). Massive branched sprays are held up over the sometimes rich mottled foliage. From the 'Dream City' line – white flowers with mahogany spots against yellow on the dorsal sepals only. Easy culture, like for your Phal. hybrids; lower light and consistent moisture – but not kept soaking wet. 3.50" pots B.S. \$12.00
- TD114 Platystele reflexa.**
Ecuador. One of my favorite pleurothallids. A cloud forest small epiphyte with many nice successively blooming bright orange flowers. Grows well here so it's not that cool-growing. 1.00" pot B.S. \$15.00
- TD214 Platystele vellota.**
Photo. Ecuador. Lilliputian - 1 1/2" tall plants put up many tiny clusters of 5-9 blooms. Flowers are only about 2 mm in size and are translucent greenish yellow with red lips. Fascinating genus - hope to offer more in the future. 1.00" pot B.S. \$15.00
- TOF2460 Pleurothallis alata.**
Costa Rica. Micro-mini cutiel! Tiny clumpy plant has "tall" spikes with a single flower at the top of each. Flowers are triangular-shaped, cream-colored with yellow tips, spotted with burgundy inside. Plant is only 1/2" tall (1 1/2" tall including spike and flower). 1.00" pots \$10.00 B.S.
- TD29 Pleurothallis allenii.**
Photo. Panama. Very showy for a small species. Long, deep maroon flowers appear around and throughout clumpy plants. Easy, warm-growing. Blooms often throughout the year. 2.00" pots \$12.00 B.S.
- TD373 Pleurothallis bivalves.**
Ecuador. Great species - classy. "Tall" (8") stems have narrow 3 1/2" leaves. Blooming from the center of the leaf successively is a 5/8' long nice flower – salmon pink overlaying a pale-yellow. 2.00" pot B.S. 15.00
- TD76 Pleurothallis corniculata.**
Panama. Very cute displays on small plants. Many single yellow-orange flowers lightly striped towards throat. Hood-like dorsal sepals give an overall appearance of 'bird beaks'. 2.00" pot \$12.00 B.S.
- TD212 Pleurothallis divaricans.**
Photo. Colombia. Small-size warm to cool growing epiphyte. 2 -inch erect to arching wire-like inflorescence has many tiny yellow flowers which open simultaneously. 2.00" pot B.S. \$12.00
- TD210 Pleurothallis janetiae.**
Costa Rica. Really neat miniature species has 3 or 4 fairly large flowers on thin wiry inflorescence, opening successively for months. Flowers are crystalline cream with purple spots and purple in the centers. Nice. 2.00" pot B.S. \$15.00
- TD59 Pleurothallis luctuosa.**
Central America through Colombia and Ecuador. Lowland tropical rainforest (warm growing). Clumpy plants produce wiry spikes with several maroon flowers. Very nice, worthwhile. 2.00" pot B.S. \$12.00
- TD269 Pleurothallis pacayana.**
Guatemala. (Correctly it is supposed to be *Pleurothallis gacayana* – even though it is named for the Pacayan Volcano.) This is said to be an error by Schlecter when describing the species.) It is such a strange plant that it is now one of my favorites! Odd tall stems are 4-sided, topped by an attractive leaf. Cluster of small bright red-orange flowers at the leaf apices. 3.00" pots B.S. \$18.00
- TOF2900 Pleurothallis prolifera.**
Photo. Brazil. Small tough plants with roundish purplish leaves have a chain of small red flowers lying in center. Excellent interesting species. Easy to grow. 2.00" pot N.B.S. \$12.00
- TD154 Pleurothallis radula.**
Costa Rica. Beautiful leaf form, medium size plants. Flowers are large, color is greenish yellow. Nice. 3.00" pot B.S. \$18.00
- TD127 Pleurothallis rowleei.**
Costa Rica to Ecuador and Colombia. Really sweet little species. Chain of pretty 3/8" flowers are finely spotted and striped with red-purple. Contrasting petals are sweet pink. 2.00" pots B.S. \$12.00
- TD336 Pleurothallis sp. #3 'Mexico'.**
We got the plant labeled as a *Pleurothallis* but it may be a *Stelis*. 12" long spike, many cupped flowers are a light brick-red. Spiraling spikes hang down. Beautiful plants – this is a really neat species. 2.00" pot B.S. \$15.00

- TD307 Pleurothallis sp. #5 'Mexico'.**
Very cute small species to 4" tall with wiry leaf stems. Single 1/4" flowers at base of leaf are golden with a reddish suffusion offset by a wine-red lip. Interestingly, this plant has been identified by Selby as *Pl. circumplexa* (O.I.C. # 13938), but they did state that this plant is not typical. We are not using that name because this plant and flowers do not remotely resemble the photos of *Pl. circumplexa* on the Internet or in books such as 'Field Guide to the Orchids of Costa Rica and Panama' (Dressler)
2.00" pot B.S. \$12.00
- TD227 Pleurothallis sp. #6 Panama.**
Panama. Numerous very thin wiry spikes flower successively with a quarter inch burgundy flower with striations – something like a bird's beak. 2.00" pot B.S. \$12.00
- TD372 Pleurothallis sp. #23 'Peru'.**
Peru. 8" tall plants with 1" x 3" long leaf which carry single yellow flowers with burgundy petals and red lip. Pretty.
2.00" pot B.S. 15.00
- TD402 Pleurothallis sp. #29 Peru.**
Peru. Small yellow flowers in center of 2" elongated heart-shaped leaf. Very cute.
3.00" pot B.S. \$12.00
- TOF2155 Pleurothallis sp. 'Tiny Hidden Flowers'.**
Mexico. Tiny Chiapas species. Attractive very clumpy miniature plants have tough round leaves – flowers are yellow and borne singly, usually under the leaf.
1" pot B.S. \$9.00
- TD80 Restrepia brachypus 'Orange'.**
Gallery photo. Colombia. Good species has fairly large flowers - orange in this select variety. The showy synsepal always has 13 stripes in *R. brachypus*. Rather uncommon but easy, rewarding. 2.00" pot \$15.00 B.S.
- TD34 Restrepia elegans x dodsonii.**
A Colombian crossed with an Ecuadorian. Hybrid vigor. Nice – "showy" flowers are copper colored covered by fine red spots. Large flower for our *Restrepia*'s.
2.00" pot B.S. \$15.00
- TD1 Restrepia striata.**
Gallery photo. Ecuador. Super easy and warm-tolerant. Blooms often. Good introduction to the world of pleurothallids. Single flowers emerge from leaf petiole and are striped all over with red-brown.
2.00" pot \$8.00 B.S.
- TD77 Restrepia xanthophthalma.**
Photo. Mexico through Colombia. Variable species is more correctly named *R. muscifera*. Ours is a broad-leaf form with very colorful flowers, red lateral sepals, dorsal spotted with red-purple. Flowers are produced successively in a fascicle at the base of the back of the leaf. Rewarding easy species. 2.00" pot \$12.00 B.S.
- TD126 Scaphosepalum anchoriferum 'Fortuna Rojo'.**
Photo. Panama. Lucky acquisition. Pretty little 4" tall plants have many 5/8" long flowers with stubby plump lateral sepals. Very good two-tone red colors (the typical is more yellow-green with purplish markings.)
2.00" pot B.S. \$18.00
- TD310 Scaphosepalum cimex.**
Ecuador. Miniature-sized warm-growing epiphyte. The "Bug-like *Scaphosepalum*" refers to the shape of the "showy" 3/4" flowers. Blooms in the winter on a slender 5" long, successively flowered inflorescence. Good species! 2.00" pot B.S. \$15.00
- TD123 Scaphosepalum decorum.**
Photo. Colombia. Really unbelievable *Scapho* with huge (for genus) attractive yellow flowers. Rare opportunity. Almost always in bloom. 3.00" pot \$25.00
- TD125 Scaphosepalum fimbriatum.**
Photo. Colombia. Bizarre yellowish flowers with red markings have bristly hair on outside. Flowers on thin wire-like stems, remind me of some little creature sticking up. Clumpy pleurothallid. This is a real conversation piece. Always in bloom.
2.00" pot B.S. \$16.00
- TD33 Scaphosepalum grande.**
Photo. Colombia. *Scaphosepalum* is another of the 27 genera in the fantastic *Pleurothallidinae*. Easy-growing fleshy plants send up tall spikes from each growth, which flower successively with "large" showy yellow flowers. Bizarre blossoms look like creatures from outer space, with long pendant appendages from each petal. Reddish in center of flower.
3.00" pot B.S. \$18.00
- TD90 Scaphosepalum microdactylum.**
Panama. 4" spikes have 4 or 5 hooded flowers opening successively. Light yellow, striped red. Lip red-purple.
2.00" pot \$12.00 B.S.
- TD314 Scaphosepalum ovulare.**
Ecuador. "The Egg-Like *Scaphosepalum*. Miniature plants with short ascending and descending successively-flowered wiry spikes. Flowers are less than a quarter inch, egg-shaped, and are yellowish with red spots and blotches. 1.00" pots B.S. \$12.00
- TD70 Scaphosepalum rapax.**
Colombia. Sweet little 1" tall plants are very clumpy. Many pendant wiry spikes have small maroon spotted flowers borne singly. Gaping flowers have 2 fang-like sepaline tails. True miniature is in bloom much of the year. 1.00" pot B.S. \$15.00

- TD152 Scaphosepalum rinkei.**
Venezuela. (Formerly sold as *S. manningii*.) Miniature clumping epiphyte has wire-like spikes which hold the single flowers out away from the plant (successively many flowered). Tiny 3/8" flowers are yellowish with an elongated red lip. This may be described as a new species soon (not *manningii*). Most *Scaphosepalum* species have proven easy to grow in our intermediate climate and quite rewarding. 2.00" pot B.S. \$12.00
- TD312 Scaphosepalum swertifolium 'Yellow'.**
Photo. Colombia. Attractive 4" tall pleurothallid. The amazing flowers have long yellow sepals held out horizontally. Center of flower is spotted with rich-red. Alien creatures. 2.00" pots B.S. \$18.00 Recommended.
- TOF2718 Schomburgkia splendida 'Natural World' AM/AOS x self.**
Photo. Colombia. Update: Doing more research into this; this would be the plant erroneously called *S. splendida* var. *Cauca*, **not the true *S. splendida***. The Award still holds and we will publish the correct name when we learn it. You can see several pictures of the Cauca variety on the Internet. Varnished, deep, almost black, wine red flowers and large, nearly petal-like pink bracts. Spikes can each a meter in length and carry 10-15 flowers. Nice fragrance. 3.50" pots \$20.00
- TOF2677 Sobralia callosa.**
Photo. Panama. If you always wanted to grow *Sobralias* but were put off by their large size - then this is for you. This "mini-*Sobralia*" also happens to have the brightest hot pink colored flowers! Good-sized blossoms too. The mature parent plant is now about 18" tall and very clumpy. I think it had around 45 flowers at once displayed beautifully around the plant. Beautiful interesting foliage too. As you know, *Sobralia* flowers are short lived (one or two days) but plant blooms over and over from the same canes throughout a season (Fall/Winter). We are the first to propagate this rare and desirable species from seed. 3.00" pot N.B.S. \$18.00
- TOF2771 Sobralia violacea "Roadcut".**
Photo. Venezuela. (Formerly sold as *Sobralia yauaperyensis*) One of the most beautiful *Sobralias* Intense purple coloration in this strain. *Sobralias* are light-loving plants. Flowers are short-lived, but flower successively from the same canes throughout a season. Very showy dramatic displays from this excellent plant. 5.00" pots \$22.00
- TOF2894 Sobralia xantholeuca 'Good Color' x self.**
Photo. Mexico. A robust vigorous Mexican terrestrial species from Chiapas which grows in wet soil with bright light. Flowers can be quite large – 6" or larger spread. "A very rare and handsome species of distinct character, which was flowered by Mr. Hill, gardener to the late R. Hanbury, Esq" (*B.S. Williams, The Orchid Growers Manual, 1885*) 3.00" pot \$20.00
- TOF2700 Spathoglottis plicata alba.**
Photo. Philippines. Pure white clone has flowers which are non-cleistogamous (they don't self-pollinate themselves automatically, like the pink *S. plicata* which grows wild in Hawaii.) Large plicate leaves. Makes a good pot-plant or a fantastic garden plant for tropical and sub-tropical gardens. 3.50" pots B.S. \$10.00 5.00" pot \$15.00
- TOF2896 Stanhopea connata 'Arnie' x self.**
Photo. New select cultivar. Fantastic showy species blooms frequently. 3 to 5 heavy 4-inch waxy orange flowers hang down beneath plant. Less red-purple markings on the hypochile than in our previous cultivar – resulting in a more overall color. Nice. 3.50" pots \$16.00
- TOF2980 Stanhopea horichiana x self.**
Costa Rica. Medium sized warm growing epiphyte (natural hybrid between *S. wardii* and *S. ecornuta*) Described by Rudolf Jenny in 1988. Very beautiful flowers (check it out on Jay's website). Petals and sepals speckled with red. 3.50" pot \$18.00
- TOF2730 Stanhopea insignis 'Dark Jungle' x self.**
Photo. Brazil. "A lusty Brazilian beauty!" (Greer, 1998) The species upon which the genus was founded. 2 or three big fleshy flowers are cream with purple spots. In this select variety, the hypochile is mostly dark purple. Low elevation dryish forests. Different! 5.00" pot N.B.S. \$28.00 3.50" pot \$20.00
- TOF2768 Stanhopea florida x self.**
Photo. Ecuador. Very hard to get. Eastern slope of the Andes - seasonally dry montane cloud forest. Showy displays of 5-8 large (up to 5") cream to light pink colored flowers speckled with red. The name refers to the fact that it produces many flowers. 3.50" pot \$18.00
- TOF2886 Stanhopea jenischiana x self.**
Photo. Ecuador, Peru, Colombia. New batch. We've been out of this for a while. Very attractive. From the 'Catorce' strain – up to 14 flowers on a spike. Predominately yellow with red spots – a few come out with orange flowers. One of the "good ones". 3.50" pot \$20.00

- TOF3069 Stanhopea maduroi x self.**
Panama. Rare new species (Dodson and Dressler, 1998). Large 6" flowers, two or three to an inflorescence, clear concolor cream-yellow with darker yellow (no spots). You wouldn't want to miss this if you are a Stanhopea enthusiast. We grow this exactly the same as all our other Stanhopeas. 3.00" pot – extremely rare \$40.00
- TOF2832 Stanhopea oculata 'Botanical Garden' x self.**
Photo. Mexico through Brazil. Still one of the greatest. All the Stanhopeas are strongly fragrant, but *S. oculata* has the most pleasant – of vanilla – and for this reason is irresistible to customers. Very showy and floriferous, with the characteristic "cheerios" markings on the sepals and petals. Recommended. 3.50" pot \$15.00
- TOF2870 Stanhopea platyceras.**
Photo. Colombia. Unbelievable opportunity to acquire one of the rarest and most beautiful Stanhopeas. This clone has a dark purplish hypochile. Rarely offered in the U.S. market. Extra large in 3.50" pots \$25.00
- TOF2850 Stanhopea ruckeri.**
Mexico to Nicaragua. Beautiful albanistic form with pale greenish petals and a blue-green ridge down the column. Identified by the OIC at Selby Gardens. 4 or 5 dramatic waxy flowers hang down from plant like birds in flight. Hard-to-find species. 3.50" pot \$15.00
- TOF2890 Stanhopea stevensonii.**
"New" (1994) and still uncommon. Massive displays of orangey gold flowers with red eye, with or without additional spots. Up to 15 five-inch flowers per pendant inflorescence. Small batch – will sell out fast. 3.50" pot \$20.00
- TOF2906 Stanhopea tigrina 'Glory of Mexico' AM/AOS x self**
Photo. Eastern Mexico. You've never seen a bigger, heavier, waxier orchid flower. Even the enormous buds are beautiful and amazing. Flowers are 6" across or larger; yellow-orange heavily blotched with red-black. Very fragrant. 3.50" pots \$25.00
- TOF2852 Stanhopea tricornis.**
Photo. Ecuador. Western slopes of the Andes - warm moist tropical forest. Unique & vigorous species has large waxy flowers with fleshy petals that stay in front, instead of curling back between the sepals as in other Stanhopeas. Fragrant. 5.00" pot \$28.00
- TOF2871 Stanhopea wardii 'Dee' HCC/AOS x self**
Nicaragua. Very special cultivar. Color is not typical for the species – orangey. But also the blooming habit is amazing – by far the most floriferous Stanhopea in our collection. Without too much exaggeration, the mother plant is either in bloom or spiking most of the year! 5.00" pot \$30.00
- TD43 Stelis argentata 'Red'.**
Photo. Panama. Prolific warmth-tolerant *Stelis* has many sprays of 1/4" red flowers - instead of the usual cream-yellow color. Very attractive display. In bloom over a good period of time. 2.50" pots B.S. \$12.00
- TD375 Stelis ciliaris**
Ecuador. Small sized warm-growing Pleurothallid. Arching pendulous and twisting inflorescences have many dark mauve fairly closely-spaced flowers. Flower parts are edged with minute whitish hairs or ciliations. 3.00" pot B.S. \$18.00
- TD144 Stelis morganii.**
Ecuador. Neat species has a climbing habit with multitudes of cream yellow flowers on short erect sprays. Nice - easy. 2.00" pot \$12.00 B.S.
- TOF2480 Trichopilia hennisiana.**
Photo. Ecuador. Beautiful species! Several full shaped white flowers with golden yellow in the full round lips. Nice fragrance. Far easier to grow than *Trichopilia suavis* (less cool demanding). 3.50" pots B.S. \$20.00
- TD394 Trichosalpinx rotundata.**
Panama. Insane pleurothallid has round cupped shaped leaves. Several spikes emerge behind the leaf, each carrying 2 or 3 small yellowish flowers, each segment has red centrally. Unique species blooms often. 2.00" pot B.S. \$15.00
- TOF2950 Vanda denisoniana.**
Thailand to Southern China. Large-size warm to cool growing clumping epiphyte. Very important species. Short spikes of waxy yellow flowers with white column and side lobes. Good quality strain. Fragrant, like vanilla. Approximate 7" leaf span. 3.50" empty pot. \$15.00
- TOF2907 Vanda Noriko Sumida. Mericlone.**
Photo. (Woodlawn Glory x Teoh Chee Keat) As you know, we grow almost all species orchids. This *Vanda* hybrid performs so well outside in our "botanical garden" that we decided to clone it again. It is a "semi-terete" plant which flowers all year long. The blossoms are purple colored with some tessellations. The flower is a "semi-terete" type flower, that is, not as full and round as those of modern strap-leaf vandas, but it grows ten times faster and easier. Handles full sun and seldom stops flowering. 3.50" pot (without media) \$15.00

All orders are expertly packed using insulated (when warranted) packing materials and shipped via FedEx Economy (or Air Priority Insured Mail if absolutely necessary). We try to keep abreast of the weather conditions in your area and will hold your order if temperatures are too extreme. Payment is by check, Money Order, Visa, MasterCard, American Express, Discover or Diners Club. Our minimum order is \$30.00 (before shipping and handling). Call Toll-Free (866) 572-8569. Our fax number is (808) 572-8917.

SHIPPING INFORMATION:

We prefer to use **FEDEX 2nd DAY SERVICE** from Hawaii; however, we will use **US POSTAL SERVICE** when requested. There will be a \$12.00 **HANDLING CHARGE** on all orders. Shipping charges will be added to this handling charge as follows:

\$25 - \$200 please add 15% of value of plants before any discounts that apply
 \$201 - \$500 add 12% of value of plants before any discounts that apply
 \$501 and over add 10% of value of plants before any discounts that apply.

Arizona:

Due to the special requirements of the Agriculture department, we are sorry but we will no longer be shipping orchids to Arizona. We will stay abreast of that situation..

Puerto Rico and Virgin Islands:

Orders to Puerto Rico containing 12 plants or less do not require a Phytosanitary Certificate. However, orders with 12 plants or more DO require a Phytosanitary Certificate. The cost for a Phytosanitary Certificate is \$10.00.

We will ship via Air Priority through the U.S. Postal Service to Puerto Rico and Virgin Islands, and shipping charges will be adjusted to reflect the actual cost of shipping plus our handling charge, **so please disregard the shipping charges that appear on your order.** Please use VISA, MasterCard, American Express, or Discover for payment; as shipping amount will need to be billed separately on the day of shipping.

FOR FEDEX STANDARD OVERNIGHT (not usually necessary - we've been very happy with the FEDEX 2nd Day Service) add an additional \$10.00

We guarantee that we will ship you only healthy, vigorous plants.

In the RARE INSTANCE where the shipment has been mishandled by the shipper, please notify us and the shipper immediately and we will do whatever is necessary to alleviate any problems.

Nomenclature: We really try to keep up on any name changes to the species we sell. New plants are sometimes re-classified or re-identified. When a species name changes we will publish the new information as soon as possible – in any case, in any we are not liable for incorrect identifications.

Tropical Orchid Farm, Inc. shall be responsible only for the purchase price of each plant sold. We make no warranty, expressed or implied as to the productiveness of any plant sold as a result of this or any other offering.
