

Fungi S. Paulenses IV¹⁾

a cl. Puttemans collecti.

Autore P. Hennings.

Peronosporaceae.

Cystopus Ipomaeae panduratae (Schwein.) Stev., Kansas p. 67.

Serra da Cantareira in foliis *Ipomaeae* sp. n. 672.

Uredinaceae.

Uromyces Rhapaneae P. Henn. n. sp.; maculis rotundatis cingulatis fuscis; soris hypophyllis gregariis, pulvinatis angulatis, ferrugineis, firmis; teleutosporis ovoideis vel ellipsoideis, flavo-brunneis, apice obtuso-papillatis vel applanatis, ca. $6\ \mu$ incrassatis pallidioribus, $20-30 \times 12-17\ \mu$, pedicello hyalino, persistente, ca. $30-120 \times 2-4\ \mu$.

Osasco mattos in foliis *Rhapaneae* sp. n. 1290.

U. ingicola P. Henn. n. sp.; maculis sparsis rotundato-angulatis fuscis; soris hypophyllis pulvinatis vel confluentibus fulvis; uredosporis ovoideis, ellipsoideis, vel oblongis, verrucosis, $18-28 \times 16-20\ \mu$, brunneo-fuscidulis; teleutosporis ovoideis apice incrassatis, rotundatis, brunneis, $18-26 \times 15-18\ \mu$, pedicello breve hyalino.

S. Paulo, Capital in foliis *Inga e* sp. in societate Darlucae Fili. Febr. 1903, n. 646.

U. Desmodii leiocarpi P. Henn. n. sp.; maculis rotundatis vel obsoletis, flavidis vel fuscidulis; soris hypophyllis sparse gregariis, pulvinatis, brunneolis; uredosporis ellipsoideis vel ovoideis flavo-brunneis, aculeato-verrucosis, $15-23 \times 12-20\ \mu$; teleutosporis ellipsoideis vel ovoideis vertice, ca. $5\ \mu$ incrassatis obtuso-rotundatis, castaneis, verrucosis, $20-28 \times 16-18\ \mu$, pedicello hyalino, $10-20 \times 3^{1/2}-4\ \mu$.

S. Paulo, Horto botanico in foliis *Desmodii leiocarpi*. Juli 1902, n. 529 (= *Uredo Desmodii leiocarpi* P. Henn. Hedw. XLI, p. 107).

Puccinia Ipomaeae-panduratae (Schwein.) Syd., Mon. I, p. 323.

Serra da Cantareira in foliis *Ipomaeae* sp. Mart. 1903, n. 671.

n. 631.

P. Heteropteridis Thüm., Mycoth. univ. (1877), n. 839.

Morro Pellado in foliis Heteropteridis sp. Juli 1904, n. 1113.

P. Anemopaegmatis P. Henn. n. sp.; maculis sparsis rotundatis vel gregarie confluentibus, brunneo-fuscis; soris hypophyllis vel epiphyllis sparsis, primo epidermide fissa pallida velatis, fulvis; uredosporis subglobosis vel ellipsoideis, brunneis, subradiato-verrucosis, verrucis cylindraceis obtusis, hyalinis, ca. $4-5 \times 2 \mu$, $20-30 \times 15-25 \mu$; teleutosporis ellipsoideis, vertice obtuso-rotundatis vel papillatis vix incrassatis, medio septatis constrictis, brunneis $30-40 \times 22-32 \mu$, pedicello hyalino, ca. $20 \times 4-6 \mu$.

S. Paulo, Capital in foliis Anemopaegmatis prostrati. Mart. 1903, n. 682.

P. Piptocarphae P. Henn., Hedw. 1896, p. 240.

Serra da Cantareira in foliis Piptocarphae sp. (Uredo). Juli 1905, n. 1322.

Pucciniosira Triumfettae Lagerh. (Ber. D. B. Ges. 1891, p. 348).

Iponema in foliis Triumfettae longicomae. April 1906, n. 718.

Cronartium Byrsinimatis P. Henn. n. sp.; maculis subrotundato-angulatis vel effuso-confluentibus rufobrunneis vel fuscidulis; uredosoris hypophyllis sparsis vel gregaris epidermide tectis dein velatis, fulvis; uredosporis subglobosis, ellipsoideis vel ovoides, brunneis, aculeatis, $30-40 \times 22-30 \mu$; teleutosporis hypophyllis gregarie effusis, columella teleutosporarum tereti, subulata simplici, ca. $1\frac{1}{2}-3 \text{ mm} \times 100-180 \mu$, brunneola; teleutosporis oblongo-fusoideis vel clavatis, acutis, $40-70 \times 12-18 \mu$.

Morro Pellado C. P. cerrado in foliis Byrsinimae coccobolifoliae. Juli 1904, n. 1140.

Uredo ochracea Diet., Hedw. 1897, p. 35.

Horto botanico in foliis Commelinaceae. April 1902, n. 502.

U. psychotricola P. Henn., Hedw. 1895, p. 321.

Serra da Cantareira in foliis Psychotriae sp. Majo 1905 (G. Edwall), n. 1264.

U. Crotalariae Diet., Hedw. 1899, p. 257.

S. Paulo, Capital in foliis Crotolariae. Aug. 1904, n. 1187.

U. Copainerae P. Henn. n. sp.; maculis effusis fuscidulis; soris hypophyllis sparse gregaris, pulvinatis, fulvis, epidermide tectis vel velatis; paraphysibus clavatis, curvulis, brunneis, $30-50 \times 8-10 \mu$; uredosporis oblongo-fusoideis vel clavatis, granulatis, brunneis, $25-40 \times 13-20 \mu$.

Morro Pellado C. P. capao in foliis *Copaiferae* sp. Juli 1904, n. 1154.

U. Apocynaceae P. Henn. n. sp.; maculis effusis fuscidulis; soris amphigenis gregarie sparsis, pulvinatis diutius tectis dein epidermide fissa velatis; uredosporis ellipsoideis, ovoideis vel clavatis, brunneis, aculeato-asperatis, $20-40 \times 13-22 \mu$.

Serra da Cantareira in foliis *Apocynaceae*. Mart. 1903, n. 694.

Aecidium Puttemansi P. Henn. n. sp.

Aecidiis cauli-vel petiolicolis eos circumdatis paulo deformantibus, flavidis; *pseudoperidiis* caespitosis cupulatis, aurantiis, contextu cellulis subrotundis vel oblongis polyedricis, reticulatis; sporis subgloboso-angulatis, flavo-fuscidulis, $14-20 \times 12-18 \mu$.

Serra da Cantareira in caulis vel petiolis *Jacarandae* sp. Mart. 1903, n. 676.

A. Piptocarphae P. Henn. n. sp.; maculis angulato-rotundatis vel effusis, fuscis; *aecidiis* hypophyllis sparsis, *pseudoperidiis* cylindraceis, flavis usque ad $3 \times 0,3$ mm, contextu cellulis oblonge fusoides, reticulatis, hyalinis; *aecidiosporis* ellipsoideis vel ovoideis, radiato-striatulis, fuscidulis, $25-36 \times 20-30 \mu$.

Serra da Cantareira in foliis *Piptocarphae* cfr. *axillaris*. Juli 1905, n. 1324.

A. Desmodii P. Henn. Hedw. 1896, p. 259.

Iponema in foliis *Desmodii* sp. April 1903, n. 707.

Septobasidiaceae.

Septobasidium crinitum (Fr.) Pat., Bull. soc. myc. Fr.

Osasco in ramulis *Rhapaneae* sp. April 1905, n. 788 et 789.

Hydnaceae.

Irpex cfr. *lacteus* Fries, Elench. p. 145.

Morro Pellado ad ramis emortuis. Juli 1904, n. 914.

Polyporaceae.

Polyporus Warmingii Berk., Fungi Glaz. p. 752.

Serra da Cantareira ad truncum arboris n. 785.

Polystictus albo-cervinus Berk., Hook. Journ. 1856, p. 234.

Rio Grande ad arborem emortuum. Juli 1904, p. 911 e.

P. trichomallus Berk. et Mont., Cent VI, n. 65.

Morro Pellado ad truncum putridum, n. 915.

Gloeoporus Rhipidium (Berk., Hook. Journ. 1897, p. 312) Speg.

Serra da Cantareira ad lignum emortuum, n. 874, 874a.

Lenzites striata Swartz, Fl. Ind. occ. p. 19.

S. Paulo, Capital ad truncum emortuum. Majo 1905, n. 847a.

L. repanda (Mont.) Fries, Epicr. p. 404.

Osasco ad truncum arboris. Majo 1905, n. 879.

Agaricaceae.

Bolbitius flavidus (Bolt.) = *B. Boltoni* (Pers.) Fr., Ep. p. 254.
S. Paulo, Capital ad terram. Febr. 1905, n. 885.

Panaeolus papilionaceus (Bull.) Fr., Epicr. p. 236.
S. Paulo, Capital ad terram. Febr. 1904, n. 884.

Pholiota paulensis P. Henn. n. sp.; pileo carnosulo, campanulato convexo, obtuso, fusco-brunneo vel fulvo squamuoso, ca. 4—5 cm diam.; lamellis liberis confertis, subventricosis, flavidofuscidulis; stipite subcavo, subtereti, brunneo, squamosulo, ca. 5 cm longo, 5 mm lato ad basim incrassato, medio annulo membranaceo, ampio, fuscidulo; sporis subglobosis vel late ellipsoideis, 1-guttulatis, laevibus, flavidofuscidulis, $4\frac{1}{2}$ —6 \times 4—5 μ .

S. Paulo, Capital ad terram, n. 753.

Ph. erebriae affinis.

Pleurotus Puttemansii P. Henn. n. sp.; pileo primo resupinato dein reniformi vel flabellato sessile, carnosulo subgelatinoso, atro, cinereo-villoso, niargine crispulo nudo, 0,5—1 cm diam.; lamellis confertis, crassiusculis, inaequilongis, fusco-brunneis, cystidiis fusoideis vel lageniformibus, 40—50 \times 10 μ , atrofuscis; basidiis subclavatis, 20—25 \times 10—14 μ ; sporis ellipsoideis, obtusis, hyalinis, 7—10 \times 4—5 μ .

Serra da Cantareira ad truncum emortuum arboris, 1905, n. 972.

Pl. atro-coeruleo applicatoque affinis.

Perisporiaceae.

Dimerosporium pelladense P. Henn.; caespitulis epiphyllis gregariis, atro-crustaceis, rotundatis usque ad 1 mm diam.; hyphis repcentibus atrofuscis, ca. 3—3 $\frac{1}{2}$ μ crassis; peritheciis lenticularibus astomis, atro-carbonaccis, 70—90 μ diam.; ascis clavatis, apice rotundatis tunicatis, 8-sporis, paraphysatis, 30—40 \times 14—20 μ ; sporis subdistichis ovoideis, hyalinis, medio septatis, 12—14 \times 5—6 μ .

Morro Pellado C. P. capao, beira do corrego in foliis Rubiaceae. Juli 1904, n. 1152.

D. Cordiae P. Henn. n. sp.; peritheciis epiphyllis sparsis vel caespitosis, globulosis atris, astomis, ca. 60—90 μ , hyphis atrofuscis, ca. 3 μ crassis apice palmato-ramosis; ascis clavatis, apice rotundatis tunicatis, 8-sporis paraphysatis, 35—53 \times 10—12 μ ; sporis subdistichis ovoideis, 1-septatis constrictis, hyalinis, 10—12 \times 4—4 $\frac{1}{2}$ μ .

S. Paulo, Capital in foliis *Cordiae* sp. Febr. 1903, n. 640.

D. cordicolae P. Henn. et *D. subpiloso* Wint. distinctum.

D. Ingae P. Henn. n. sp.; caespitulis epiphyllis gregariis, atris, pulvinato-rotundatis, ca. 1 mm diam., hyphis atrofuscis ramosis, septatis, 3—8 μ crassis radiantibus, conidiis oblongo-cylindraccis vel clavatis, brunneis, medio 1-septatis, 40—60 \times 8—10 μ ; peritheciis caespitosis globulosis, atrofuscis, cellulosis, ca. 150—200 μ ; ascis

clavatis apice obtuso-rotundatis tunicatis, 8-sporis, $70-85 \times 23-30 \mu$; sporis subtristichis vel conglobatis, oblongis, subfusoideis vel clavatis, medio 1-septatis, hyalinis, $40-52 \times 7-8 \mu$.

Serra da Cantareira in foliis *Inga* sp. Mart. 1903, n. 670.

D. Strychni P. Henn. n. sp.; maculis mycelii amphigenis effusis, fuscis, radiantibus; peritheciis sparsis vel gregariis, globosis, astomis, atro-membranaceis, $90-100 \mu$ diam.; ascis clavatis, obtusis, 8-sporis paraphysatis, $26-35 \times 8-10 \mu$; sporis subdistichis ovoideis medio 1-septatis, hyalinis, $5-6 \times 3 \mu$.

S. Paulo, Capital in foliis *Strychni*. Mart. 1903, n. 686.

Dimerium Celtidis P. Henn. n. sp.; caespitulis hypophyllis gregariis, rotundato-pulvinatis, atris, crustaceis, 1-3 mm diam.; peritheciis, gregariis, subgloboso-collapsis, cellulosis, atrofuscis, pertusis, $90-120 \mu$ diam.; ascis cylindraceo-clavatis, obtusis, 8-sporis, $40-60 \times 4-5\frac{1}{2} \mu$; sporis oblique monostichis vel subdistichis ovoideis vel ellipsoideis, medio 1-septatis, fuscidulis, $5-7 \times 3 \mu$.

Serra da Cantareira in foliis *Celtidis glycypharpae*. Mart. 1903, n. 688.

D. Solani P. Henn. n. sp.; caespitulis epiphyllis rotundatis sparsis vel gregarie confluentibus, atris; peritheciis gregariis in hyphis Meliolae parasiticis globulosis atris, cellulosis, $60-100 \mu$ diam.; ascis clavatis, obtusis, paraphysatis, 8-sporis, $40-50 \times 7-10 \mu$; sporis oblique monostichis vel distichis ovoideis vel ellipsoideis, medio 1-septatis haud constrictis, fuscobrunneis, $8-11 \times 3-4 \mu$.

Morro Pellado in foliis *Solani grandiflori*. Julio 1904, n. 1104.

Parodiella meliolooides (B. et C.) Winter, Hedw. 1885, p. 257.

Morro Pellado C. P. Capão in foliis *Perae* sp. Julio 1904, n. 1139; Pedro Doll in foliis *Lüheae* sp. Martio 1903, n. 689.

P. grammodes (Kunze) Cooke — *P. perisporioides* (B. et C.) Sacc.

Horto botanico in foliis *Desmodii* et *Crotalariae* sp. April 1902, n. 592, 503.

Perisporium Lantanae P. Henn. n. sp.; peritheciis hypophyllis gregariis in villo nidulantibus, globulosis atris, cellulosis, $140-180 \mu$ diam.; hyphis fuscidulis repentibus simplicibus vel ramosis, ca. $3-7 \mu$ crassis circumdatis; ascis oblongo-ovoideis vel clavatis, apice rotundatis, 8-sporis, $60-80 \times 18-20 \mu$; sporis distichis vel conglobatis fusoideis vel clavatis, curvulis utrinque obtuso-rotundatis medio 1-septatis constrictis, dein 3-septatis, olivaceo-fumosis, $23-32 \times 6-10 \mu$.

S. Paulo, Capital, Cheara in foliis *Lantanae* sp. Martio 1903, n. 630.

Meliola amphitricha Fries, Elench. II, p. 109.

Morro Pellado in foliis *Andirae* sp. Juli 1904, n. 1101, 1102.

Iponema in foliis *Aristolochiae*. April 1903, n. 709, 710.

M. inermis Kalchbr. et Cooke, Grev. 1880, p. 34, f. 38.

Agua Branca in foliis Anonaceae. Mayo 1905, n. 739.

Horto botanico in foliis Aegiphilae Sellowiana e n. 531.

M. cfr. Cookeana Speg. Fung. Arg. IV, p. 41.

Morro Pellado in foliis Didymopanax venosi. Julio 1904, n. 1112.

Capnodiaceae.

Capnodium sp. (immaturum).

S. Paulo Capital in foliis Philodendri. Juli 1904, n. 1163.

Capnodium sp. (immaturum).

Campinas in foliis Palmarum. Junio 1905, n. 1304.

Scorias paulensis P. Henn. n. sp.; mycelio atro-crustaceo epiphylo effuso; hyphis repentibus septatis radiatis fusco-atris; peritheciis clavatis vel piriformibus ca. $150-200 \times 30-80 \mu$, e fibris fuscis compositis; ascis clavatis vel oblongo-ovoideis, 4-sporis, $20-30 \times 6-8 \mu$; sporis conglobatis, fusoideis vel clavatis, 3-septatis, hyalinis, $10-12 \times 3-3\frac{1}{2} \mu$. Conidia ovoidea vel ellipsoidea, fuscidula, 1-septata, $5-9 \times 3-4 \mu$.

S. Paulo, Capital in foliis Justiciae sp. Mayo 1905, n. 1270.

Hypocreaceae.

Megalonectria polytrichia (Schwein.) Speg., Fung. Arg. Pug. IV, n. 211.

Osasco in ramis emortuis, Mayo 1905, n. 864.

(Conidiis, peritheciis immaturis.)

Hypocrella camerunensis P. Henn., Engl. bot. Jahrb. XXIII, p. 545.?

Iponema, ramis Mikaniae sp. April 1903.

(Peritheciis immaturis.)

Ascopolyporus Puttemansii P. Henn. n. sp.; stromatibus subglobosa-tuberosis vel ungulate-polyporiformi basi discoideo-adnatis, gelatinoso-carnosis parte superiore convexa flavo-brunnea fuscidula sterili, inferiore fertili applanata granuloso-ostiolata, 3-4 cm diam.; peritheciis immersis confertis oblongo-cylindraceis, ca. $1\frac{1}{2}$ mm longis; ascis cylindraceis, vertice obtuso-rotundatis, 4-sporis, $350-400 \times 11-12 \mu$; sporis parallelis, cylindraceis, utrinque rotundatis, pluriseptatis, hyalinis haud dilabentibus, ca. $280-300 \times 4-5 \mu$.

Rio Grande in culmis Bambusae. Febr. 1903, n. 654.

Sporis 4-5 μ crassis etc. *Ascopolyporo* polyporoide etc. omnino diversus.

Dothideaceae.

Bagnisiclla Pruni P. Henn. n. sp.; stromatibus amphigenis innato-superficialibus, pulvinato-subglobosis, atris, granulato-rugulosis,

1—2 mm diam., loculis subglobosis immersis, ostiolatis; ascis clavatis, vertice rotundatis, attenuato-stipitatis, 8-sporis, paraphysatis, ca. 100—140 μ longis p. sporif. 60—70 \times 15—25 μ ; sporis subdistichis, oblongo-ellipsoideis, hyalinis, continuis, 16—18 \times 6—7 μ .

Serra da Cantareira in foliis Pruni sphaerocarpae. Aug. 1907, n. 1179.

B.? Alibertiae P. Henn. n. sp.; stromatibus epiphyllis raro hypophyllis innato superficialibus sparsis vel aggregatis subgloboso-pulvinatis, atro-subcarbonaceis, rugulosis, ca. 1 mm diam.; loculis immersis, subglobosis rotundato-ostiolatis, contextu subcoriaceo, atroviolaceis; ascis cylindraceo-clavatis, obtusis, paraphysatis, 8-sporis, 70—90 \times 8—12 μ ; sporis oblique monostichis, oblongis, hyalinis continuis (immaturis), 12—15 \times 4—5 μ .

Meninos (Municipio S. Bernardo) in foliis coriaceis Alibertiae concoloris. Sept. 1902, n. 583.

Phyllachora peribebuyensis Speg., Fung. Guar. I, p. 274.
Piritubo in foliis Tibauchiniae. Junio 1903, n. 744.

Ph. Psychotriae Rehm, Hedw. 1897, p. 371.

(*Ascis* immaturis.)

Ph. vernoniicola P. Henn., Hedw. 1902, p. 110.

Serra da Cantareira in foliis Vernoniae. Febr. 1902, n. 468.

Ph. paraguaya Speg. Fung. Guar. I, p. 272.

Horto botanico in foliis Lüheae speciosae. Mayo 1902, n. 513, 1531.

Ph.? Guazumae P. Henn. n. sp.; maculis rufo-fuscidulis rotundatis vel effusis; stromatibus epiphyllis sparsis, rotundato-pulvinatis, atris, plurilocularibus ostiolatis; ascis clavatis, obtusis, 8-sporis, paraphysatis, ca. 70—75 \times 7—8 μ ; sporis oblique monostichis, ellipsoideis, hyalinis? immaturis.

Iponema, Pedro Santa in foliis Guazumae ulmifoliae. April 1903, n. 722.

Ph. curvulispora P. Henn. n. sp.; stromatibus epiphyllis sparsis vel aggregatis rotundato-pulvinatis, ca. 3—5 mm diam., atro-nitentibus, loculis subglobosis, ostiolis vix prominulis; ascis clavatis, obtusis, 8-sporis, 60—80 \times 10—20 μ ; sporis subdistichis, fusoideis, curvulis, hyalinis, intus granulosis, continuis, 17—20 \times 5—7 μ .

Morro Pellado in foliis Myrtaceae. April 1904, n. 1142.

Ph. Rhopalae P. Henn. n. sp.; stromatibus epiphyllis gregariis, angulato-pulvinatis, atro-nitentibus, ca. 3—4 mm diam., loculis sub-

globosis immersis fuscis; ascis clavatis, vertice obtuso-rotundatis, 8-sporis, paraphysatis, $100-110 \mu$ longis, p. sporif. $80-90 \times 9-11 \mu$; sporis oblique monostichis, ellipsoideis, continuis, hyalinis, $12-18 \times 6-7 \mu$.

Morro Pellado C. P. cerrado in foliis Rhopalae brasiliensis. Julio 1904, n. 1161.

Ph. rhopalinae (Mont.) Sacc. distincta.

Ph. Cannabis P. Henn. n. sp.; stromatibus caulinis dense gregariis, plano-pulvinatis, atro-opacis angulato-rotundatis; ascis clavatis apice rotundatis, 8-sporis, $45-55 \times 10-12 \mu$; sporis oblique monostichis vel distichis subfusoides vel ovoideis hyalinis, continuis nubilosis, $12-17 \times 5-6 \mu$.

S. Paulo, Capital in caulis Cannabis sativae. Majo 1905, n. 1250.

Ph.? Ingae P. Henn. n. sp.; maculis sparsis vel effusis, brunneofuscis; stromatibus amphigenis sparsis vel aggregatis, atris, angulato-pulvinatis, planis, 1-2 mm diam., peritheciis immersis, globulosis obtuso-ostiolatis; ascis cylindraceo-clavatis, obtusis, paraphysatis immaturis.

Iponema in foliis Ingae sp. April 1904, n. 727.

Ph. graminis (Pers.) Fuck., Symb. Myc. 216.

Serra da Cantareira in foliis Panici. Mart. 1902, n. 475.

Ph. Eleusines Speg., Myc. Arg. ser. II, 1902, p. 75.

Piracicaba in foliis Eleusines indicae. Dec. 1894, n. 1167.

Auerswaldia Puttemansi P. Henn., Hedw. XLVI (1902), p. 111.
Horto botanico in foliis Lauraceae, 1902, p. 571.

Dothidella Mabae P. Henn. n. sp.; stromatibus amphididymis sparsis vel aggregatis, plano-pulvinatis rotundatis, atris, opacis, 1-2 mm diam., peritheciis immersis subglobosis obtuso-ostiolatis; ascis fusoides vel clavatis, obtusis, 8-sporis, $50-75 \times 8-15 \mu$, paraphysatis; sporis, oblique monostichis vel distichis oblongo-fusoides vel clavatis hyalinis continuis dein medio, 1-septatis, $18-24 \times 5-7 \mu$.

Morro Pellado, capao secco in foliis Mabae inconstans Gr. April 1904, n. 1146.

Naemacyclus Styracis P. Henn. n. sp.; stromatibus hypophyllis sparsis vel gregariis pulvinato-superficialiis, atris, verrucoso-rugulosis, 1-2 mm diam.; loculis immersis, verrucoso-ostiolatis, rotundatis, ca. 180μ diam.; ascis clavatis, obtuso-rotundatis, paraphysatis, 8-sporis, $70-90 \times 15-20 \mu$; sporis subtristichis, oblongo-fusoides vel clavatis, obtusis, hyalinis, medio, 1-septatis, $22-27 \times 5-6 \mu$.

Morro Pellado in foliis Styracis. Julio 1904, n. 1532.

Dothidellae pulverulentae (B. et Br.) distinctus.

Dothidea Striphnodendri P. Henn. n. sp.; stromatibus epiphyllis, erumpente superficialibus, gregariis, pulvinatis rugulosis, atro-carbonaceis, 0,5—1 mm diam., loculis immersis globulosis, fuscis, obtuso-ostiolatis; ascis cylindraceis vertice obtuso-rotundatis, 8-sporis, 45—55 × 4—6 μ ; sporis oblique monostichis ellipsoideis utrinque rotundatis, medio 1-septatis, constrictis, fuscis, 9—10 × 4—5 μ .

Morro Pellado C. P. cerrado in foliis *Striphnodendri* Barbati. Mart., Juli 1904, n. 1155

Sphaeriaceae.

Physalospora Tibouchinae P. Henn. n. sp.; maculis rotundatis brunneo-fuscis; peritheciis gregariis epiphyllis, erumpente superficialibus, subglobosis vel ovoideis, fuscis, 150—200 μ ; ascis clavatis, vertice rotundatis, 8-sporis, 55—60 × 12—16 μ ; paraphysibus filiformibus, hyalinis, ca. 2 μ crassis; sporis subdistichis oblongis, clavatis vel subfuscoideis, obtusis, hyalinis, continuis, 15—20 × 4—5 μ .

Serra da Cantareira in foliis *Tibouchinae*. Julio 1905, n. 1312.

Ph. pelladensis P. Henn. n. sp.; maculis rotundatis, rufo-fuscidulis; peritheciis aggregatis rotundato dispositis, hemisphaericis, atris nitentibus, ca. 150 μ ; ascis subovoideis vel subclavatis, 8-sporis, 50—70 × 18—22 μ , paraphysatis, sporis subdistichis vel congregatis ellipsoideis vel ovoideis, hyalinis, continuis, 10—15 × 7—8 μ .

Morro Pellado in foliis Melastomataceae. Julio 1904, n. 1162.

Ph. Machaerii P. Henn. n. sp.; maculis sparse effusis fuscidulis; peritheciis laxe gregariis subhcmisphaericis atro-nitentibus, ca. 130 μ diam.; ascis cylindraceo-clavatis, obtusis, 8-sporis, paraphysatis, 35—40 × 5—6 μ ; sporis late ellipsoideis vel ovoideis, intus granulatis, hyalinis, 8—12 × 6—7 μ .

Serra da Cantareira in foliis *Machaerii lanati*. Mart. 1902, n. 467.

Ph. solanicola P. Henn.; maculis rotundatis, pallido-exaridis; peritheciis laxe gregariis erumpente superficialibus, hemisphaericis atro-nitentibus, ca. 140 μ diam.; ascis clavatis obtusis, 8-sporis, 55—60 × 18—20 μ ; sporis subdistichis, oblongis vel ellipsoideis obtusis intus granulosis, 13—17 × 7—9 μ .

S. Paulo, Capital in foliis *Solani* sp. Mart. 1903, n. 632.

Bertia Puttemansi P. Henn. n. sp.; peritheciis caespitose gregariis ovoideis, atris, subpilosis, 0,4—0,6 μ diam., dein collapsocupulatis; ascis clavatis pedicellatis, vertice obtuso-rotundatis, 55—80 × 10—18 μ , 8-sporis, paraphysatis; sporis subdistichis, oblongis curvulis, utrinque obtusis, medio, 1-septatis haud constrictis, hyalinis, 15—22 × 5—7 μ .

Serra da Cantareira in cortice arboris. Julio 1905, n. 1330.

Anthostoma solanicola P. Henn. n. sp.; peritheciis caespitosis subepidermide fissa nidulantibus conicis vel ovoideis atris ad basim hyphis atrofuscis septatis, 3—7 μ crassis circumdatis; ascis clavatis vel oblongis, 8-sporis, 80—110 \times 25—30 μ ; paraphysibus copiosis filiformibus, hyalinis, ca. 2 μ crassis; sporis subdistichis ellipsoideis, atrobrunneis, continuis, 20—30 \times 15—18 μ .

S. Paulo, arredores da Capital in ramis *Solani paniculati*. Julio 1905, n. 1300, 1301.

Rosellinia perusensis P. Henn. n. sp.; peritheciis plerumque caespitosis, innato-superficialibus, subglobosis, atro-carbonaceis, conico-ostiolatis, ca. 0,6—0,8 μ diam.; ascis cylindraceis, obtusis, 8-sporis, paraphysatis, 70—80 \times 4—5 μ ; sporis oblique monostichis, ovoideis vel ellipsoideis, atris, 1—2-guttulatis, 6—10 \times 3 $\frac{1}{2}$ —4 $\frac{1}{2}$ μ .

Perùs ad lignum decorticatum. Sept. 1905, n. 1392.

Puttemansiella P. Henn. n. gen. Perithecia coriacea superficialia, ostiolata. Ascii clavati octospori paraphysati. Sporae subglobosae vel ellipsoideae coloratae.

P. Desmodii P. Henn. n. sp.; peritheciis superficialibus gregariis saepe confluentibus, coriaceis, subglobosis, ostiolatis dein collabentibus, fulvis, pruinoso-subtomentosulis, 0,5—0,8 μ diam.; ascis clavatis apice rotundatis vel applanatis, 8-sporis, paraphysatis, 70—110 \times 20—30 μ ; sporis subdistichis subglobosis, ellipsoideis vel ovoideis, atrobrunneis, continuis, 20—24 \times 15—20 μ .

Serra da Cantareira in ramulis *Desmodii leiocarpi*. Julio 1905, n. 1321.

Diplotheeca Tunae (Spreng.) Starb., Sphaer. imperf. cogn. p. 30.

Rio de Jan., Petropolis in foliis *Opuntiae*. Junio 1904, n. 1183.

Amphisphaeria Fourcroyae P. Henn. n. sp.; maculis effusis fuscidulis, peritheciis sparsis, innato-superficialibus, subglobosis, ostiolatis, atris, 160—200 μ diam.; ascis cylindraceis, vertice obtusis, 8-sporis, paraphysatis, 80—100 \times 10—12 μ ; sporis oblique distichis oblongis vel clavatis utrinque obtusis, medio 1-septatis haud constrictis, olivaceo-fuscis, 12—20 \times 5—7 μ .

Rio de Jan., Petropolis in foliis *Fourcroyae giganteae*. Junio 1904, n. 1182.

Didymosphaeriae pachythecae Sacc. et Syd. distincto.

Ophiobolus cantareiensis P. Henn. n. sp.; peritheciis sparsis vel aggregatis, innato-superficialibus conoideo-ovoideis, obtuse ostiolatis atris, ca. 0,3—0,4 mm; ascis cylindraceo-clavatis, apice obtuso-rotundatis, tunicatis, 8-sporis, 100—120 \times 10—15 μ ; paraphysibus copiosis, hyalinis, ca. 2 μ crassis; sporis parallele stipatis, bacillaribus, guttulatis dein pluriseptatis hyalino-fuscidulis, 40—60 \times 4—5 μ .

Serra da Cantareira in ligno putrido. Juli 1905, n. 1333.

Valsaceae.

Eutypa lata (Pers.) Tul., Sel. Fung. Carp. p. 56?

S. Paulo, Capital in caulibus emortuis Ricini communis. Octob. 1904, n. 1202.

Diatrype Baccharidis P. Henn. n. sp.; stromatibus erumpenti superficialibus aggregato-effusis, pulvinato-subconoideis atris, ca. 1 mm diam., peritheciis immersis, albidis, subglobosis, ostiolatis; ascis clavatis, stipitatis, 8-sporis $50-60 \mu$, p. sporifer. $30-40 \times 5-6 \mu$; sporis subdistichis, allantoideis, $7-11 \times 2-3 \frac{1}{2} \mu$ fuscidulis.

Serra da Cantareira in ramis Baccharidis. Julio 1905, n. 1329.

Hypoxylaceae.

Nummularia Glycyrrhiza (B. et C.) Sacc. Syll. I, p. 401. Osasco in ligno emortuo. Majo 1905, n. 876.

Hypoxylon annulatum (Schwein.) Mont., Syll. Crypt. p. 213. Perús in ramis emortuis. Sept. 1905, n. 1391.

H. Piptadeniae P. Henn. n. sp.; stromatibus irregulare effusis, atris; peritheciis subglobosis, ca. 1 mm diam., disco dilatato, plano, annulato-marginato, ostiolo papilliformi; ascis cylindraceo-clavatis, 8-sporis, paraphysatis, p. sporif. $50-60 \times 5 \mu$; sporis oblique monostichis, ellipsoideis, obtusis, atris, $8-10 \times 4-5 \mu$.

Osasco in raniis emortuis *Piptadeniae communis*. Majo 1905. n. 1293.

Microthyriaceae.

Myiocopron Stigmatostalycis P. Henn. n. sp.; peritheciis gregarie superficialibus atris, scutellato-dimidiatis, poro pertusis, cellulosis, ca. $250-300 \mu$ diam., confluentibus, atro-subcrustaceis; margine fibrosis; ascis clavatis, apice rotundatis, 8-sporis, paraphysatis, $45-60 \times 13-18 \mu$; sporis subdistichis, ellipsoideis vel ovoideis; granuloso-farctis, continuis, hyalinis, $8-13 \times 4 \frac{1}{2}-5 \frac{1}{2} \mu$.

S. Paulo, Capital in pseudobulbis *Stigmatostalycis radicans*. Martio 1903, n. 680.

Asteronia Lauraceae P. Henn. n. sp.; maculis mycelii hypophyllis gregariis, rotundatis, atro-crustaceis; peritheciis aggregatis, globulosis, cellulosis, ca. $150-180 \mu$ diam.; ascis clavatis, apice rotundatis, 8-sporis, $30-35 \times 4-6 \mu$, paraphysatis; sporis subdistichis oblongis, subfusoideis vel clavatis, obtusis, brunneo-fuscis, $6-10 \times 2-3 \mu$; hyphis repentibus, radiantibus, ramosis, fuscis, $2-3 \mu$ crassis.

Lontra, Rio Feio in foliis Lauraceae. Edwall 1905, n. 1583 a, b.

Asterella Puttemansi P. Henn. n. sp.; maculis mycelii hypophyllis rotundatis vel effusis, atro-crustaceis, hyphis repentibus, ramosis, fuscis, ca. $4-5 \mu$ crassis; peritheciis sparsis vel aggregatis,

dimidiato-scutatis, radiato-cellulosis, atris, 140—200 μ diam.; ascis ovoideis, tunicatis, 8-sporis, ca. 50—55 \times 23—25 μ ; sporis subdistichis vel congregatibus, ellipsoideis, medio valde constrictis mox dehiscentibus, ca. 20—22 \times 10—12 μ , cellulis subglobosis, hyalinis, ca. 10—12 μ .

Rio Grande in foliis Myrtaceae. Julio 1904, n. 1193.

Asterina Phoradendri P. Henn. n. sp.; maculis mycelii amphigenis rotundatis atris, hyphis repentibus, atrofuscis, septatis, ca. 3 μ crassis; peritheciis sparsis vel aggregatis dimidiato-scutatis, celluloso-radiatis; ascis ovoideis vel ellipsoideis, apice rotundato-tunicatis, 4—8-sporis, paraphysatis, 50—95 \times 40—50 μ ; sporis ovoideis, medio septatis constrictis, atris, 30—40 \times 20—24 μ .

Morro Pellado, in foliis *Phoradendri lanceolato-elliptici*. Julio 1904, n. 1110.

A. mandaguensis P. Henn. n. sp.; maculis mycelii epiphyllis, effusis, atro-crustaceis; hyphis fuscis ramosis, 2—3 $\frac{1}{2}$ μ , conidiis fusoideis medio 1-septatis, hyalino-fuscidulis, 10—18 \times 2 $\frac{1}{2}$ —3 μ ; peritheciis sparsis vel gregariis, dimidiato-scutatis, radiato-cellulosis, 200—250 μ ; ascis ovoideis, apice tunicatis, 8-sporis, 35—50 \times 20—30 μ ; sporis ovoideis vel ellipsoideis, obtusis, medio septatis, paulo constrictis, atrofuscis, 20—25 \times 8—10 μ .

Mandaqui, Serra Cantareira in foliis *Eugeniae uniflorae*. Martio 1903, n. 674.

A. serrensis P. Henn. n. sp.; maculis mycelii epiphyllis fuscidulis, hyphis fuscis, ramosis; peritheciis sparse gregariis, dimidiato-scutatis, radiato-cellulosis, ca. 250—300 μ ; ascis clavatis, apice rotundato-tunicatis, 8-sporis, 80—110 \times 20 μ ; sporis congregatibus, ovoideis, rotundatis, medio septatis, constrictis, cellula superiori granulatis, atrofuscis, 20—26 \times 8—10 μ .

Alto da Serra in foliis Myrtaceae. Aug. 1902, n. 593a.

A. Chrysophylli P. Henn. n. sp.; maculis mycelio epiphyllis, effusis atris, hyphis ramosis atris, 4—7 μ crassis; peritheciis aggregatis, dimidiato-scutatis, radiato-cellulosis, margine fimbriatis, 200—250 μ ; ascis ovoideis, 8-sporis, 50—60 \times 40—45 μ ; sporis ovoideis vel ellipsoideis, medio septatis constrictis, congregatibus, atris, 25—30 \times 12—14 μ .

Serra da Cantareira in foliis *Chrysophylli* sp. Julio 1905, n. 1332.

Hysteriaceae.

Tryblidiella rufula (Spreng.) Sacc., Syll. II, p. 757.

Morro Pellado in ramis Meliaceae. Julio 1904, n. 912.

Parmularia Styracis Lev., Ann. sc. nat. ser. II, p. 236.

Morro Pellado in foliis *Styracis*. Julio 1904, n. 1106.

Myriangiaceae.

Cookella parasitica P. Henn., Engl. bot. Jahrb. XXVIII, p. 275.

Morro Pellado in foliis *Styracis c. Parmulariae Styraci*. Julio 1904, n. 1106.

Myriangium mirabile P. Henn. in Hedw. 1902, p. 55.

Horto botanico in foliis Lauraceae. April 1902, n. 537.

M. Citri P. Henn. n. sp.; stromatibus amphigenis superficialibus, crustaceis, rotundato-angulatis, rugulosis, ca. 1—2 mm diam., atris, loculis subglobosis monoascis; ascis subglobosis vertice tunicatis, 30—45 μ ; 8-sporis, conglobatis ovoideis vel ellipsoideis, rectis vel subcurvulis, ca. 5—7-septatis, muriformibus, hyalinis, 20—24 \times 5—8 μ .

Osasco in foliis *Citri nobilis*. Mayo 1905, n. 1292.

Phacidiaceae.

Phacidium? Parinarii P. Henn. n. sp.; ascomatibus epiphyllis gregarie effusis, innato-superficialibus, atro-nitentibus, primo clausis, dein rimoso-dehiscentibus; ascis paraphysatis, clavatis, apice rotundatis, 8-sporis, 80 \times 7 μ (plerumque immaturis); sporis oblique monostichis oblongis vel ellipsoideis, continuis, hyalinis, ca. 12 \times 6 μ .

Morro Pellado in foliis *Parinarii* sp. Julio 1904, n. 1156.

Sphaeropsidaceae.

Phyllosticta Abutilonis P. Henn. n. sp.; maculis sparsis, rotundatis, pallidis exaridis, zona brunnea cinctis; peritheciis epiphyllis subgregariis, brunneo-fuscis, lenticularibus, perforatis, 100—120 μ ; conidiis ellipsoideis vel ovoideis, obtusis, continuis, hyalinis, 4 $\frac{1}{2}$ —5 $\frac{1}{2}$ \times 2 $\frac{1}{2}$ —3 $\frac{1}{2}$ μ .

Horto botanico in foliis *Abutilonis*. April 1902, n. 494.

Ph. Rutaceae? P. Henn. n. sp.; maculis rotundatis, pallidis exaridis; peritheciis hypophyllis gregariis, lenticularibus, pertusis, atris, ca. 60—90 μ ; conidiis oblongis, continuis, hyalinis, 8—10 \times 2 $\frac{1}{2}$ —3 μ .

Iponema in foliis *Rutaceae*. April 1903, n. 733.

Ph. capitalensis P. Henn. n. sp.; maculis oblongis pallidis exaridis, zona brunnea cinctis; peritheciis epiphyllis gregariis, subgloboso-lenticularibus, atris, pertusis; conidiis subglobosis vel ellipsoideis, guttulatis, hyalinis, 6—8 \times 5 $\frac{1}{2}$ —6 μ .

S. Paulo, Capital in foliis *Stanhopeae*. April 1903, n. 736.

Ph. Trigoniae P. Henn. n. sp.; maculis sparsis rotundatis, fuscis; peritheciis epiphyllis sparsis, lenticularibus, atris perforatis, ca. 80 μ ; conidiis ovoideis vel ellipsoideis, granulosis, hyalinis, 8—10 \times 6—7 μ .

S. Paulo, Capital in foliis *Trigoniae*. Febr. 1903, n. 650.

Ph. Qualeae Allesch., Hedw. 1897, p. 238.

Iponema, in foliis *Qualeae* sp. Mart. 1903, n. 717.

Ph. Psychotriae P. Henn. n. sp.; maculis rotundatis vel effusis, pallidis; peritheciis epiphyllis gregariis, lenticularibus, atris, ca. $60-80\ \mu$; conidiis ellipsoideis vel oblongis hyalinis, eguttulatis, $5-6 \times 2-2\frac{1}{2}\ \mu$.

Morro Pellado in foliis *Psychotriae*. Julio 1904, n. 1144.

Ph. paulensis P. Henn.; maculis rotundatis, ca. 1 mm diam., niveis, exaridis; peritheciis sparsis, lenticularibus, atris pertusis, ca. $80\ \mu$ diam.; conidiis subglobosis, 1-guttulatis; hyalinis, $4-5\ \mu$.

S. Paulo, Capital in foliis *Myrtaceae*. April 1905, n. 1259.

Phoma Psidii P. Henn. n. sp.; peritheciis fructicolis gregariis, atris, lenticularibus vel globulosis, poro pertusis; conidiis oblongo-ellipsoideis vel ovoideis, 2-guttulatis, $5-6 \times 2\frac{1}{2}-3\ \mu$, hyalinis.

S. Paulo, Capital in fructibus *Psidii*. Mart. 1905, n. 1233.

Ph. Terminaliae P. Henn. n. sp.; peritheciis gregariis fructicolis, pulvinatis, cinereo fuscis, ca. $200-250\ \mu$; conidiis fusoideis, acutiusculis, 2-guttulatis, hyalinis, $5-8 \times 2-3\ \mu$.

Santos in fructibus *Terminaliae Catappae*. Jan. 1903, n. 604.

Dendrophoma Myrtaceae P. Henn. n. sp.; maculis rotundatis vel effusis fuscis; peritheciis amphigenis sparsis, lenticularibus vel subglobosis fuscis, $100-180\ \mu$; conidiophoris filiformibus, paulo ramosis, hyalinis, $8-15 \times 2-2\frac{1}{2}\ \mu$, conidiis ellipsoideis intus granulatis, continuis, hyalinis, $8-10 \times 4-5\ \mu$.

Pirituba beira de cominhos in foliis *Myrtaceae*. Julio 1904, n. 1185.

Cincinnobolus Puttemansii P. Henn. n. sp.; peritheciis ovoideis apice conoideis obtusis, perforatis, olivaceo-fuscidulis membranaceo-reticulatis, $50-80 \times 25-40\ \mu$; conidiis ellipsoideis vel ovoideis, continuis, hyalinis, $6-8 \times 2\frac{1}{2}\ \mu$.

S. Paulo, Capital in Oidio ad *Zinniam elegans*. Mart. 1905, n. 1255.

Ascochyta Plumeriae P. Henn. n. sp.; maculis fuscidulis effusis, peritheciis epiphyllis gregarie sparsis, lenticularibus, poro pertusis, atris, $60-70\ \mu$; conidiis ellipsoideis vel ovoideis, medio, 1-septatis, hyalinis, $5-6 \times 3\ \mu$.

S. Paulo, Capital in foliis *Plumeriae* cfr. *Warmingii* in societate *Gloeosporii*. Febr. 1903, n. 620.

Daruca Filum (Biv.) Cast., Cat. Pl. Mars. Supl. p. 53.

Meninos in Uredine ad folium *Myrtaceae*. Sept. 1902, n. 600.

Rio Grande in Uredine ad folium *Cyperaceae*. Febr. 1903, n. 655.

Sphaeropsis Puttemansii P. Henn. n. sp.; peritheciis gregarie sparsis epidermide tectis fissa dein erumpentibus, hemisphaerico-conodiis, poro perforatis, atris, $120-140\ \mu$; conidiis oblongis vel clavatis, obtusis, 2-guttulatis, castaneis, $25-40 \times 12-18\ \mu$.

S. Paulo, Capital in foliis *Pini*. April 1905, n. 1258.

Sphaeropsidi Ellisii Sacc. distincta.

Coniothyrium Stanhopeae P. Henn. n. sp.; maculis effusis, pallidis exarescentibus; peritheciis gregariis, hemisphaericis erumpentibus atris, ca. $100-120 \mu$; conidiis ellipsoideis, continuis, fuscidulis, $3\frac{1}{2}-4 \times 3-3\frac{1}{2} \mu$.

S. Paulo, Capital in foliis *Stanhopeae* sp. Dec. 1904, n. 1206.

C. Connari P. Henn. n. sp.; maculis rotundatis pallidis exarescentibus, zona brunnea cinctis, peritheciis sparsis vel gregariis epiphyllis, erumpenti-lenticularibus, atris, poro lato perforatis; conidiis ovoideis vel ellipsoideis, fuscidulis, $4-6 \times 2\frac{1}{2}-3 \mu$.

Morro Pellado in foliis *Connari* sp. Julio 1904, n. 1143.

C. paulense P. Henn. n. sp.; maculis rotundatis vel effusis pallido-exarescentibus, zona flava cinctis, peritheciis lenticularibus poro perforatis, atris, $130-150 \mu$; conidiis ellipsoideis vel ovoideis, fuscobrunneis, $3-3\frac{1}{2} \times 2\frac{1}{2} \mu$.

Eugenio de Mello in foliis *Citri*. Octob. 1902, n. 549.

Haplosporella Machaerii P. Henn. n. sp.; stromatibus epiphyllis, erumpente superficialibus, gregariis, atro-carbonaceis, rugosis angulatis, loculis immersis; conidiis oblongis vel subfusoideis, $10-15 \times 4-5 \mu$, fuligineis, continuis, conidiophoris brevibus, teretis, hyalinis.

S. Paulo, Horto botanico in foliis *Machaerii*. Martio 1902, n. 491.

Stat. conid. ad *Dothideam Machaerii* P. Henn. (= *Cocconia Machaerii* P. Henn.).

Diplodia Cytharexyli P. Henn. n. sp.; peritheciis sparse gregariis erumpentibus, subhemisphaericis, atris; conidiis ellipsoideis, utrinque obtusis, medio 1-septatis vix constrictis, atris, $13-16 \times 7-8 \mu$.

Serra da Cantareira in ramis *Cytharexyli*. Julio 1905, n. 1326.

Hendersonia solanicola P. Henn. n. sp.; maculis rotundatis, pallido arecentibus; peritheciis sparsis, lenticularibus, poro pertusis, $180-200 \mu$, atris; conidiis oblongis vel subclavatis, rotundatis, rectis vel curvulis, 5-7-septatis, brunneis, $15-28 \times 5-6 \mu$.

S. Paulo, Capital in foliis *Solani* sp. Febr. 1903, n. 621.

Leptostromataceae.

Leptothyrium cantareirensse P. Henn. n. sp.; maculis rotundatis, pallidis; peritheciis amphigenis circulariter dispositis, atris, dimidiato-scutatis, confluentibus, radiato-cellulosis, $60-100 \mu$; conidiis ellipsoideis, utrinque rotundatis, 1-2-guttulatis, hyalinis, $6-8 \times 2\frac{1}{2}-3 \mu$.

Serra da Cantareira in foliis *Mikaniae* sp. Junio 1902, n. 527.

Asterostomella pelladensis P. Henn. n. sp.; maculis mycelii effusis, atris, hyphis repentibus ramosis fuscis, $2\frac{1}{2}-3 \mu$ crassis; peritheciis epiphyllis gregariis dimidiato-scutatis, radiato-cellulosis, $60-80 \mu$,

fuscosstellulato-dehiscentibus; conidiis ovoideis, intus granulatis, fuligineis, $15-20 \times 10-13 \mu$, conidiophoris brevibus hyalinis.

Morro Pellado in foliis Malpighiaceae. Julio 1904, n. 1159.

A. paraguayensis Speg., Fl. Guar. I, p. 151.

Serra da Cantareira in foliis Cestri. Julio 1905, n. 1311.

Melanconiaceae.

Gloeosporium Cattleyae P. Henn. n. sp.; acervulis hypophyllis effuso-sparsis, punctoideis, flavidulis dein erumpente nigricantibus, ca. 180μ diam.; conidiis ellipsoideis utrinque rotundatis, hyalinis, nubilosis, $15-22 \times 7-11 \mu$.

S. Paulo, Capital in foliis Cattleyae Leopoldii. Jan. 1903, n. 605.

G. Elasticae Cooke et Mass., Grev. XVIII, p. 74.

S. Paulo, Capital in foliis Fici elasticae. Junio 1906, n. 1168.

G. fructus Caricae P. Henn. n. sp.; acervulis gregarie effusis primo fulvidis dein nigricantibus, ca. $120-150 \mu$; conidiis oblongocylindraceis, utrinque rotundatis, hyalinis, nubilosis, $12-16 \times 4-5 \mu$.

S. Paulo, Capital in fructibus Fici Caricae. Febr. 1905, n. 1252.

G. fructus Psidii P. Henn. n. sp.; acervulis gregarie effusis, nigricantibus; conidiis oblongis subfusoideis vel clavatis hyalinis nubilosis, $14-20 \times 5-6 \mu$.

S. Paulo, Capital in fructibus Psidii. Mart. 1905, n. 1232.

G. Loranthaceae P. Henn. n. sp.; maculis pallidis rotundatis; acervulis sparsis fuscescentibus, ca. $60-90 \mu$; conidiis oblongocylindraceis vel clavatis, hyalinis, nubilosis, $10-16 \times 5-6 \mu$.

Rio de Janeiro, Petropolis in foliis Loranthaceae. Julio 1904, n. 1178.

G. Echitidis P. Henn. n. sp.; maculis rotundatis, pallidis exaridis; acervulis gregariis epiphyllis nigricantibus, ca. $80-100 \mu$ diam.; conidiis oblongis, cylindraceis vel clavatis, hyalinis, nubilosis, $10-15 \times 5 \mu$.

S. Paulo, Capital in foliis Echitidis. Julio 1904, n. 1190.

Colletotrichum Papayae P. Henn. n. sp.; acervulis gregariis innato-erumpentibus atris, ca. $90-160 \mu$, setulis subulatis, atris, simplicibus apice obtusiusculis, $30-45 \times 3\frac{1}{2} \mu$; conidiis oblongocylindraceis, rectis vel curvulis, hyalinis, nubilosis, $12-20 \times 5-7 \mu$.

S. Paulo, Capital in ramis petiolisque Caricae Papayae. Juli 1905, n. 1338.

Pestalozzia Palmarum Cooke, Grev. t. 86, f. 3.

S. Paulo, Capital in foliis Arecae rubrae. Febr. 1903, n. 619.

P. elasticola P. Henn.; maculis angulatis dein effusis, pallidis exaridis, zona fusco-brunnea cinctis; acervulis amphigenis sparsis vel gregariis, epidermide pallida velatis, atris; conidiis fusoideis 4-septatis, cellulis 2-superioribus cinnamomeis, cellulis 2-inferioribus hyalinis,

$14-20 \times 7-10 \mu$, cellula suprema hyalina-papillata triaristata, setulis filiformibus, hyalinis, $10-18 \mu$ longis; stipite $5-10 \mu$.

S. Paulo, Capital in foliis Fici elasticae. Junio 1904, n. 1169.

P. Elasticae Koord. omnino diversa.

P. Callophylli P. Henn. n. sp.; acervulis amphigenis sparsis vel subgregariis erumpentibus atris, epidermide fissa velatis; conidiis subfusoideis, 4-septatis, loculis 3 atris, $13-18 \times 6-8 \mu$, loculis extimis hyalinis, setulis 3 usque ad 20μ longis, pedicello usque ad 10μ longo.

Morro Pellado in foliis Callophylli sp. Julio 1904, n. 1133.

P. Sapotae P. Henn. n. sp.; maculis effusis, fuscis; acervulis epiphyllis erumpentibus atris; conidiis fusoideis, 4-septatis, loculis 3-atris, ca. $10-14 \times 5-6 \mu$, loculis extimis hyalinis, papillatis, 3-setulis filiformibus, $10-15 \mu$, pedicello brevi, hyalino.

S. Paulo, Capital in foliis Achrae Sapotae. Mart. 1905, n. 1253.

Mucedinaceae.

Oospora Dothideae P. Henn. n. sp.; caespitulis effusis vel subhemisphaericis, albidis vel isabellinis, ceraceo-farinaceis; hyphis repentibus, septulatis, hyalinis; conidiis subglobosis hyalinis, granulatis, $3\frac{1}{2}-4 \mu$.

Horto botanico in Dothideae Machaerii. Mart. 1902, n. 491.

Dematiaceae.

Scolecotrichum Dalbergiae P. Henn. n. sp.; acervulis hypophyllis sparsis, pulvinatis, ochraceis, ca. 1 mm diam.; hyphis brevibus subclavatis ochraceo-brunneis, conidiis oblongo-fusoideis, utrinque rotundatis, medio 1-septatis, flavo-brunneis, $40-50 \times 7-10 \mu$.

Morro Pellado in foliis Dalbergiae sp. Julio 1904, n. 1122.

Cercospora incarnata P. Henn. n. sp.; caespitulis hypophyllis effusis in villo nidulantibus incarnatis; hyphis fasciculatis septatis, roseo-fuscidulis, conidiis fusoideis vel clavatis, obtusis, 3-6-septatis, carneolis, $20-46 \times 4-5 \mu$.

S. Paulo Capital in foliis Solani sp. Febr. 1903, n. 632.

C. Caladii P. Henn. n. sp.; maculis fuscidulis, caespitulis sparsis rotundatis, atris, hyphis fasciculatis, septatis, fuscis, ca. $2\frac{1}{2}-3\frac{1}{2} \mu$ crassis; conidiis fusoideis, subacutis, 3-5-septatis, fuscidulis, $30-50 \times 3-4 \mu$.

S. Paulo, Capital in foliis Caladii sp. Mart. 1902, n. 476.

C. Cybistacis P. Henn. n. sp.; maculis sparsis, rotundatis, pallide fuscidulis; caespitulis hypophyllis, effusis, fuscis, hyphis fasciculatis, fuscidulis, septatis, $2\frac{1}{2}-3 \mu$ crassis; conidiis longe fusoideis, curvulis, pluriguttulatis, $20-60 \times 2 \mu$, fuscidulis.

S. Paulo, Horto botanico in foliis *Cybistacis antisyphiliticae*. Junio 1902, n. 506.

C. Zeyrae P. Henn. n. sp.; caespitulis hypophyllis sparsis in villo nidulantibus, atris; hyphis fasciculatis fuscis, ca. 3—4 μ crassis; conidiis fusoideis, curvulis, 3—7-septatis subconstrictis, fuscis, 40—60 \times 3 $\frac{1}{2}$ —4 μ .

Morro Pellado in foliis *Zeyra montana*. Julio 1904, n. 1109.

C. Artanthes P. Henn. n. sp.; maculis rotundatis, atrofuscis, sparsis caespitulis epiphyllis, hyphis fasciculatis, septatis fuscis, ca. 3 μ crassis; conidiis fusoideis, utrinque rotundatis, 5-septatis subhyalinis, 40—50 \times 2 $\frac{1}{2}$ —3 μ .

Serra da Cantareira in foliis *Artanthes* sp. Martio 1903, n. 678.

C.? Stachytarphetae P. Henn. n. sp.; maculis fuscis, rotundatis sparsis; caespitulis hypophyllis fuscis; hyphis fasciculatis septatis, ramosis, fusco-olivaceis; conidiis fusoideis utrinque acutis, hyalino-fuligineis, medio 1-septatis, 15—30 \times 3—3 $\frac{1}{2}$ μ .

S. Paulo, Capital in foliis *Stachytarphetae*. Febr. 1903, n. 639.

C. paulensis P. Henn. n. sp.; maculis gregariis, fuscis, rotundatis; caespitulis plerumque hypophyllis olivaceo-fuscis, 1—2 $\frac{1}{2}$ mm diam.; hyphis fasciculatis, clavatis, septatis, olivaceo-fuscis, 10—30 \times 3 $\frac{1}{2}$ —4 μ ; conidiis fusoideis vel clavatis, 1—3-septatis, fuscidulis, 20—40 \times 3—4 μ .

Iponema in foliis *Cassiae* sp. April 1903, n. 715.

C. iponemensis P. Henn. n. sp.; maculis sparse gregariis, rotundatis saepe confluentibus, atrobrunneis, caespitulis hypophyllis in villo nidulantibus, fuscis, hyphis brevibus, fasciculatis, fusco-brunneis; conidiis clavatis vel fusoideis, 3—5-septatis, subhyalinis, 30—50 \times 3 $\frac{1}{2}$ —4 μ .

Iponema in foliis *Cassiae* sp. April 1903, n. 732.

C. frangulina P. Henn. n. sp.; maculis fuscidulis effusis; caespitulis hypophyllis pulvinatis, ferrugineo-fuscis; hyphis fasciculatis, septatis, brunneis, 4—6 μ crassis; conidiis fusoideis vel clavatis, 3—7-septatis vel pluriguttatis, 25—70 \times 4—5 μ , fuscidulis.

Iponema in foliis *Frangulae* sp. April 1903, n. 721.

C. Anonaceae P. Henn. n. sp.; maculis fuscidulis rotundatis vel effusis caespitulis hypophyllis rotundatis sparse gregariis, fuscis; hyphis fasciculatis, septatis fuscidulis usque ad 150 \times 3 $\frac{1}{2}$ μ ; conidiis cylindraceo-fusoideis, 3—7-septatis, fuscidulis, 15—35 \times 2 $\frac{1}{2}$ —3 $\frac{1}{2}$ μ .

Agua Branca in foliis *Anonaceae*. Majo 1903, n. 738.

Helminthosporium paulense P. Henn. n. sp.; caespitulis amphigenis effusis, atris; hyphis repentibus, septatis, fuscis, 3—4 $\frac{1}{2}$ μ crassis; conidiis fusoideis fusco-brunneis, 3-septatis, 15—24 \times 4 μ , pedicello hyalino, ca. 10 \times 2 μ .

S. Paulo, Capital in foliis *Myrtaceae*. April 1905, n. 1260.

H. cantareiense P. Henn. n. sp.; caespitulis effusis, velutinis atris, hyphis erectis rigidis, fasciculatis, atris, 7—12 μ crassis; conidiis clavatis, pedicellatis apice rotundatis, atrobrunneis, 6—8-septatis, constrictiusculis, 50—60 \times 8—12 μ .

Serra da Cantareira in ramis emortuis. Julio 1905, n. 1334.

Cryptocoryneum Bombacis P. Henn. n. sp.; caespitulis hypophyllis gregariis, atris; conidiis glomerato-fasciculatis cylindraceis, rectis vel curvulis, utrinque rotundatis, atrofuscis, 4—8-septatis, 25—44 \times 6—7 μ .

Morro Pellado in foliis Bombacis. Julio 1904, n. 1123.

Macrosporium leguminis Phaseoli P. Henn. n. sp.; caespitulis effusis atris; hyphis fasciculatis simplicibus, pluriseptatis, atris, ca. 200 \times 4—8 μ ; conidiis clavatis apice rotundatis, 3—7-septatis, clathratis, fusco-atris, 20—35 \times 10—15 μ .

S. Paulo, Capital in leguminibus Phaseoli lunati. Mart. 1905 n. 1243.

Stilbaceae.

Stilbella Melastomataceae P. Henn. n. sp.; epiphyllum sparsum vel gregarium album, ca. 0,5 mm longis; stipitibus teretis ad basim incrassatis, hyalinis, ca. 300—400 μ longis, 40 μ crassis, capitulis clavatis, apice rotundatis, 60—70 μ crassis, conidiis fusoideis, rectis intus granulatis, hyalinis, 10—15 \times 2—2 $\frac{1}{2}$ μ .

Morro Pellado in foliis Melastomataceae in societate Physalosporae pelladensis. Julio 1904, n. 1162.

Tuberculariaceae.

Bactridiopsis Phoradendri P. Henn. n. sp.; sporodochii amphigenis gregariis, pulvinatis vel subhemisphaericis, flavidis vel aurantiacis cinerescentibus, granulato-verruculosis, ca. 0,5—0,8 mm diam., saepe confluentibus, hyphis subimmersis, septatis, constrictis, hyalinis, 3—4 $\frac{1}{2}$ μ crassis; conidiophoris teretibus, hyalinis, 20—30 \times 8—12 μ ; conidiis acrogenis clavatis, obtusis, continuis, 40—80 \times 15—20 μ , intus nubilosus, hyalino-flavidulis.

Ressaca in foliis coriaceis vivis Phoradendri sp. Junio 1904, n. 1189.

Isariella P. Henn. n. gen.; sporodochia parasitica, superficialia, fasciculata-fasciata, ceracea ex hyphis hyalinis septatis, convergentibus laxe conflata. Conidia ellipsoidea, continua, hyalina.

I. Auerswaldiae P. Henn. n. sp.; sporodochii subceraceis superficialibus gregarie fasciculatis, subfasciatibus, subramosis, albidis, ca. 1 mm longis, hyphis saepe convergentibus laxe conflatis vel subliberis, ramosis, septatis, denticulatis, hyalinis, ca. 4—7 μ crassis; conidiis acrogenis vel pleurogenis?, ellipsoideis, hyalinis, ca. 6 \times 4 μ .

S. Paulo, Horto botanico in stromatibus Auerswaldiae Puttemansiae P. Henn. ad folia Lauraceae. 1902, n. 571.

Fusarium baccharidicola P. Henn. n. sp.; sporodochiiis gregarie erumpentibus, subceraceis, clavulatis, spathulatis vel subcupulatis, coccineis; hyphis dense fasciculatis hyalinis vel flavidis, 2—3 μ crassis, simplicibus; conidiis fusoideis, curvulis utrinque acutis pluriseptatis (ca. 10—14), hyalinis, $60—90 \times 4—6 \mu$.

Pirutuba in ramulis Baccharidis dracunculifoliae in societate Cochenillae. Junio 1905, n. 1274.

Epicoccum neglectum Desm., Ann. sc. nat. XVII, p. 95.

S. Paulo, Capital in foliis Oryzae sativae. Mart. 1905, n. 1247.
