

## New or Noteworthy Parasitic Fungi in Japan-II\*

By

K. TOGASHI\*\*

and

S. KATSUKI\*\*\*

### 1. *Cercospora astragali* WORONICHIN

Travaux du Musée Botanique de l'Acad. Sci., U.S.S.R. 21: 87-252, 1927.

Hab. on *Astragalus sinicus* L. (Genge).

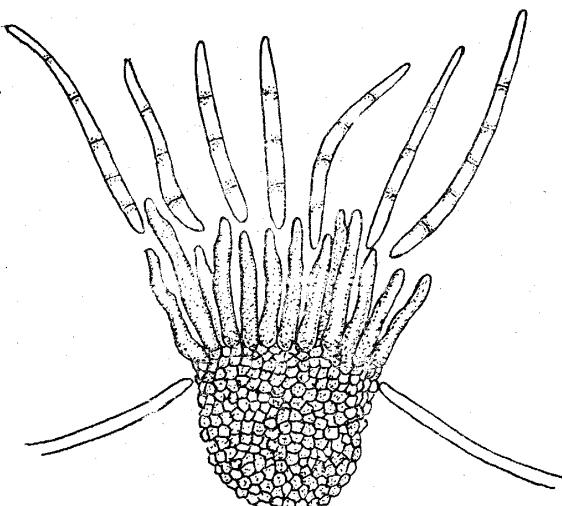

Pref. Kagoshima: Taniyamamura, May 20, 1951, H. YOSHII; May 27, July 27, 1951, H. TSUMAGARI.

### 2. *Cercospora chionanthi-retusi* TOGASHI et KATSUKI sp. nov.

(Fig. 1)

Maculis amphigenis, indefinitis, supra griseo-brunneis, infra nervuli limitatis, subangularibus, pallide brunneis, 1-6 mm. diametro, interdum, confluentibus; caespitulis amphigenis, praecipue epiphyllis, numerosissimis, geriseo-lis; stromatis atro-fuscis vel atris, globosis vel subcircularibus, 25-60 $\mu$  crassis; conidiophoris dense fasciculatis, non geniculatis, simplicibus, continuis, rectis vel leniter flexuosis, pallide fuligeneis, brevis, 18-27  $\times$  2.5-3.0  $\mu$ ; conidiis cylindraceis vel cylindraceo-obclavatis, rectis vel leniter curvatis, ad bases obconicis, ad apices acutiusculis, hyalinis, ad septa non constrictis, 2-6-septatis, 30-50  $\times$  2.5-3.0  $\mu$ .

Fig. 1. *Cercospora chionanthi-retusi* TOGASHI et KATSUKI ( $\times 740$ ).

Hab. on *Chionanthus retusus* LINDL. et PAXT. (Hitotsuba-tago).

\*) Contributions from Agricultural Institute, Yokohama National University, No. 6.

\*\*) Professor of Yokohama National University

\*\*\*) Special Expert of Fukuoka Prefecture

Pref. Fukuoka: Fukuoka-city, Oct. 16, 1951, S. KATSUKI-Type.

The present species differs from *C. chionanthi* ELL. et EV. in having well developed stromata, denser fascicles, paler, shorter conidiophores, and more nearly cylindric, more narrow conidia.

### 3. *Cercospora chrysanthemi* HEALD et WOLF

Mycologia 3: 15, 1911; B. P. I. Bull. 226: 85, 1912; LIENEMAN, Ann. Mo. Bot. Gard. 16: 32, 1929; TAI, Bull. Chin. Bot. Soc. 2, 2: 49-50, 1936.

Syn. *Cercospora chrysanthemi* PUTTEMANS, Bull. Soc. Roy. Bot. Belgique, 8: 244-247, 1911.

*C. chrysanthemi-coronarii* SAWADA, Descrip. Catal. Formosan fungi II: 147-149, 1922.

Hab. on *Chrysanthemum coronarium* L. var. *spatiosum* BAILEY (Shungiku).

Pref. Kagoshima: Sakurajima, April 29, 1950, S. KATSUKI.

The *Cercospora* fungus occurring on *Chrysanthemum coronarium* var. *spatiosum* has hitherto been identified as *C. chrysanthemi-coronarii* in Japanese literature, but no significant difference between the fungus and *C. chrysanthemi* could be found as TAI (1936) already pointed out.

*C. chrysanthemi* is included in the long synonymous list of *C. apii* FRES. under the consideration of JOHNSON and VALLEAU (Phytopa. 39, 10: 763-770, 1949).

### 4. *Cercospora contraria* H. et P. SYDOW

Sacc. Syll. Fung. 22: 1430, 1913.

Hab. on *Dioscorea quinqueloba* THUNB. (Kaede-dokoro).

Pref. Fukuoka: Shikanoshima, Nov. 27, 1949, S. KATSUKI.

### 5. *Cercospora evodiae* SYDOW

Ann. Myc. 12: 112, 1914; SAWADA, Descrip. Catal. Form. Fungi I: 669, 1919; Sacc. Syll. Fung. 25: 889-890, 1931.

Hab. on *Evodia meliaeifolia* BENTH. (Hama-sendan).

Pref. Kagoshima: Mt. Shiroyama, Kagoshima-city, Oct. 26, 1949, S. KATSUKI.

### 6. *Cercospora fukuokaensis* CHUPP sp. nov.

(Fig. 2)

Maculis amphigenis, primum minutis, sparsis, subangularibus, venuis limitatis, rubro-brunneis, 1-3 mm., dein sordide brunneis vel griseo-brunneis, saepe confluentibus, interdum ad margine folium irregularibus; caespitulis amphigenis, saepe hypophyllis, prexiguis; stromatis subglobosis, brunneis vel atro-brunneis, 17-35  $\mu$  crassis; conidiophoris dense fasciculatis, simplicibus, rectis

vel leniter flexuosis, olivaceo-brunneis, continuis, brevis,  $7-27 \times 2.5-3.7 \mu$ , plerumque  $20 \times 3 \mu$ ; conidiis conspicuiter obclavatis, rectis vel curvulis, ad bases truncatis vel subtruncatis, ad apices acutis, 1-7-septatis, hyalinis,  $32-70 \times 2.5-3.0 \mu$ .

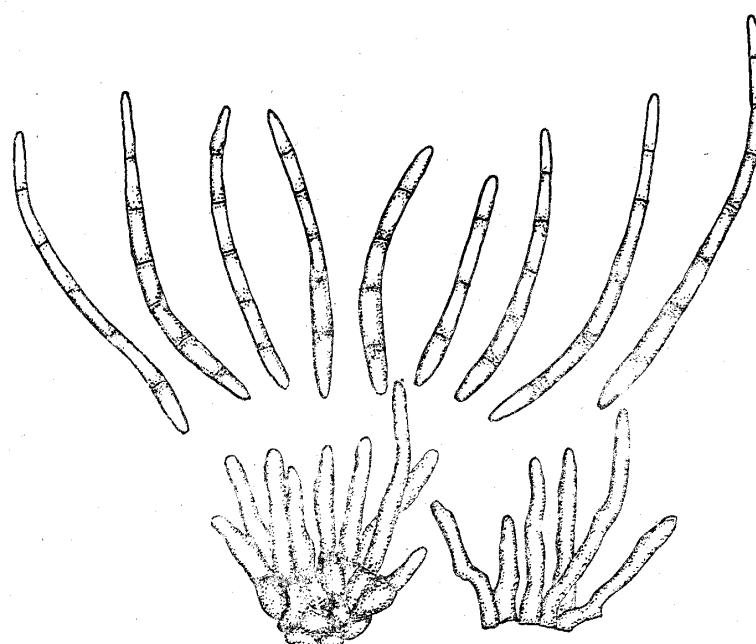

Fig. 2. *Cercospora fukuokaensis* CHUPP ( $\times 740$ )

Hab. on *Styrax japonica* SIEB. et ZUCC. (Egonoki).

Pref. Fukuoka: Futsukaichi-machi, July 5, 1950, Sept. 22, 1950; Sept. 5, 1951, S. KATSUKI-Type; Mino-mura, Oct. 11, 1951, S. KATSUKI. Pref. Tokyo: Nanao-mura, Oct. 7, 1951, E. KUROSAWA.

This fungus is not like *C. styracae* nor any of the species on other hosts of Styracaceae.

#### 7. *Cercospora hibisci* TRACY et EARLE

Bull. Torrey Bot. Club. 22: 179, 1895; Sacc. Syll. Fung. 14: 1099, 1899; LIENEMAN, Ann. Mo. Bot. Gard. 16: 38, 1929; SOLHEIM, Mycol. 23: 373-379, 1931.

Syn. *Cercospora hibisci-manihotis* P. HENN. Hedw. 43: 146, 1904.

*C. hibisci-cannabini* SAWADA, Descrip. Catal. Form. Fungi, II: 153, 1942.

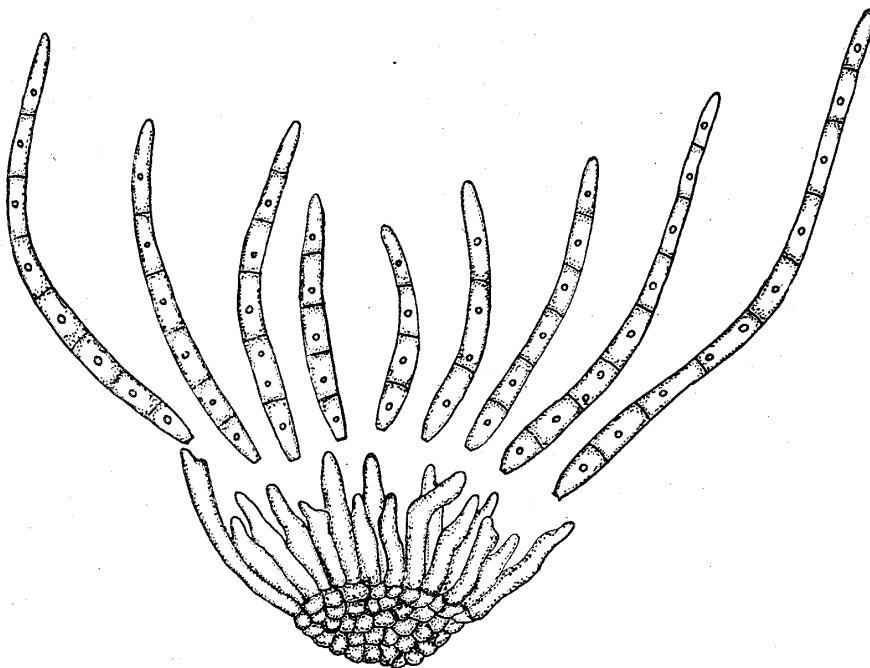

Hab. on *Hibiscus syriacus* L. (Mukuge).

Pref. Fukuoka: Hojo-mura, Oct. 16, 1947; Moji-city, Oct. 26, 1948; Kurume-city, Nov. 6, 1947, S. KATSUKI. Pref. Kagoshima, Yaku Island, Aug. 10, 1951, K. TOGASHI and S. KATSUKI.

8. *Cercospora horiana* TOGASHI et KATSUKI sp. nov.

(Fig. 3)

Maculis amphigenis, sparsis, primum minutis, nigro-brunneis, subcirculatis et irregularibus, dein effusis et magnis, supra atro-brunneis, nigro-marginatis, non rare zonatis, 5-10 mm. diametro, saepe confluentibus; caespitulis amphigenis, sed autem saepe hypophyllis, dispersis, paucis in quaque macula, minutissime punctiformibus; stromatis globosis, atro-brunneis, 18-37  $\mu$  crassis; conidiophoris dense fasciculatis, pallide fuligineis, brevis, plerumque 12-25  $\times$  3-4  $\mu$ , raro usque 37  $\times$  4  $\mu$ , simplicibus, rectis vel subflexuosis, non septatis; conidiis cylindraceis vel obclavatis, utrimque attenuatis, erectis vel curvatis, ad bases subtruncatis, ad apices subobtusis, guttulatis, 2-8-septatis, dilute fuligineis, 25-123  $\times$  3-5  $\mu$ .

Fig. 3. *Cercospora horiana* TOGASHI et KATSUKI ( $\times 740$ )

Hab. on *Parthenocissus tricuspidata* PLANCH. (Tsuta).

Pref. Chiba: Matsudo, Oct. 21, 1925, S. Hori. Pref. Tokyo: Nanao-mura, Minamitama-gun, Oct. 7, 1951, E. KUROSAWA-Type.

The only two species of *Cercospora* having stromata have been described on Vitaceae. The conidiophores of our species are somewhat like those of *C. riachueli* SPEG. and *C. brachypus* ELL. et EV., but the latters have quite distinct conidia and differ in other ways.

**9. *Cercospora hydrocotyles* ELL. et EV.**

Jour. Myc. 3: 16, 1887; Sacc. Syll. Fung. 10: 624, 1892.

Hab. on *Hydrocotyle sibthorpioides* LAMK. (Chidome-gusa).

Pref. Fukuoka: Fukuoka-city, Oct. 31, 1948; Katsura-mura, June 6, 1950, S. KATSUKI. Pref. Kagoshima: Yaku Island, Oct. 20, 1949, S. KATSUKI.

**10. *Cercospora litseae-glutinosae* H. et P. SYDOW**

Philipp. Jour. Sci. (Bot.), 8: 284, 508, 1913; Ann. Myc. 15: 264-265, 1917.

Hab. on *Litsea japonica* Juss. (Hama-biwa).

Pref. Miyazaki: Aoshima Island, Apr. 26, 1951, S. KATSUKI. Pref. Kagoshima: Yaku Island, Aug. 5, 1951, K. TOGASHI and S. KATSUKI.

**11. *Cercospora nojimai* TOGASHI et KATSUKI sp. nov.**

(Fig. 4)

Maculis amphigenis, angularibus vel irregularibus, nervuli limitatis, supra atro-brunneis vel violaceo-brunneis, indefinite marginatis, subinde sordide-brunneis, infra griseo-brunneis vel brunneis, 3-8 mm. diametro, confluentibus, saepe totum folium occupantibus; caespitulis epiphyllis, griseoribus; stromata atro-brunneis, cellulis paucis compositis vel absentis; conidiophoris fasciculatis, simplicibus, continuis vel 1-septatis, atro-brunneis, brevis, 25-40×2.5-3.7  $\mu$ ; conidiis elongato-obclavatis, curvatis, raro rectis, ad bases obconico-truncatis, ad apices subacutis, olivaceis, 55-90×2.5-3.7  $\mu$ .

Hab. on *Impatiens textori* Miq.  
(Tsurifune-so).

Pref. Kyoto: Mt. Hiei, Oct. 12, 1924, T. NOJIMA. Pref. Tokyo: Nanao-mura, Minamitama-gun, Oct. 7, 1951, E. KUROSAWA-Type. Pref. Kanagawa: Yumoto, Hakone, Oct. 15, 1950, K. TOGASHI

The present fungus has colored distinctly elongate-obclavate conidia and very short conidiophores, differing from *C. campisi* (TOGASHI, Bull. Imp. Coll. Agric. & Forestry, Morioka, 17: 56-57, 1934) and *C. fukushiana* (MATSUURA) YAMAMOTO (Jour. Soc. Trop. Agric. 6: 601-602, 1934) with hyaline, acicular conidia. This

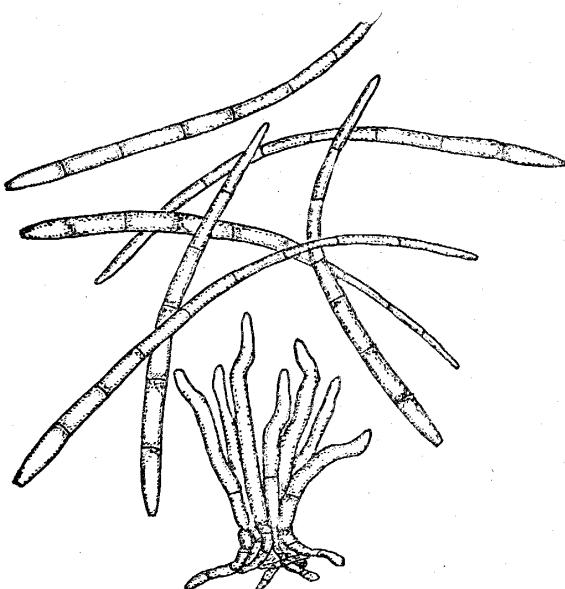

Fig. 4. *Cercospora nojimai* TOGASHI et KATSUKI ( $\times 740$ )

fungus is also clearly distinguishable from *C. balsaminae* Mendoza (MENDOZA and LEUS-PALI, Philipp. Jour. Sci. 75 : 166-168, 1941).

The macroscopical distinction of our fungus from the fungi mentioned above is in having vein-limited, angular, blackish-brown spots.

### 12. *Cercospora nymphaeacea* COOK et ELLIS

Grevillea 6 : 89, 1878; Sacc. Syll. Fung. 4 : 432, 1886; ELLIS and EVERHART, Jour. Myc. 1 : 22, 1885; ATKINSON, Elisha Mitchel Sci. Soc. Jour. 8 : 54, 1892; LIENEMAN, Ann. Mo. Bot. Gard. 16 : 43, 1929; TIRUMALACHER and CHUPP, Mycol. 40 : 358, 1948.

Syn. *Cercospora exotica* ELL. et EV. Proc. Acad. Nat. Sci. Phila. 45 : 463, 1898.

*C. nelumbonis* THARP, Mycol. 9 : 111, 1917.

Hab. on *Nuphar japonicum* DC. (Kawahone).

Pref. Fukuoka : Raizan-mura, Aug. 6, 1950, S. KATSUKI.

### 13. *Cercospora omphakodes* ELLIS et HOLWAY

Jour. Myc. 1 : 5, 23, 1885; Sacc. Syll. Fung. 4 : 447, 1886; ATKINSON, Elisha Mitchel Sci. Soc. Jour. 8 : 42, 1892; LIENEMAN, Ann. Mo. Bot. Gard. 16 : 43, 1929; CHUPP and DOIDZE, Bothalia, 4, 4 : 889, 1948.

Syn. *C. phloginia* PECK, New York Sta. Mus. Bull. 150 : 23, 1911.

Hab. on *Phlox paniculata* L. (Kusa-kyochikuto).

Pref. Tokyo : Toyoda, Minamitama-gun, Oct. 3, 1950, E. KUROSAWA.

This species belongs to *C. apii* FRES. in the view of JOHNSON and VALLEAU (1. c.).

### 14. *Cercospora pittospori* PLAKIDAS

Mycol. 32 : 601, 1940.

Hab. on *Pittosporum tobira* AIT. (Tobera).

Pref. Fukuoka : Shikano-shima, Dec. 23, 1948, S. KATSUKI. Pref. Kagoshima : Yaku Island, Oct. 17, 1949, S. KATSUKI.

### 15. *Cercospora ubi* RACIB.

Parasit. Algen u. Pilze Javas, 3 : 39, 1900; Sacc. Syll. Fung. 16 : 1073, 1902; BUTLER and BISBY, The Fungi of India : 144, 1931; YAMAMOTO, Jour. Soc. Trop. Agric. 6 : 608, 1934; SAWADA, Agric. Exp. Sta. Formosa, Circ. 38 : 702, 1942; Descrip. Catal. Form. Fungi VIII : 124, 1943.

Hab. on *Dioscorea bulbifera* L. f. *spontanea* MAKINO et NEMOTO (Marubadokoro).

Pref. Iwate : Morioka, Sept. 12, 1935, K. TOGASHI. Pref. Kagoshima : Yaku Island, Oct. 13, 18, 1949, S. KATSUKI. Pref. Fukuoka : Shikanoshima, Nov. 21, 1949, S. KATSUKI.

**16. *Mycosphaerella pueraricola* (YAMAMOTO) WEIMER et LUTTRELL**

Phytopa. 38: 348-358, 1948.

Syn. *Cercospora pueraricola* YAMAMOTO, Trans. Sapporo Nat. Hist. Soc., 142-143, 1934.

Hab. on *Pueraria lobata* OHWI (Kudzu).

Pref. Fukuoka: Mt. Ehiko, Sept. 21, 1940, Y. MAKI; Osa-mura, Nov. 11, 1951, S. KATSUKI.

The present fungus was first described by YAMAMOTO in 1934 from Formosa naming of *C. pueraricola*. Recently WEIMER and LUTTRELL (1948) discovered the perfect stage of this species from Georgia, U. S. A. and they reported under the name of *Mycosphaerella pueraricola*.

**17. *Mycosphaerella rosicola* (PASSERINI) DAVIS**

Mycol. 30: 282-298, 1938; Texas Agric. Exp. Sta. Circ. 87: 9, 1940.

Syn. *Cercospora rosicola* PASSERINI, Just's Bot. Jahresber. 3: 276, 1877; Sacc. Syll. Fung. 4: 460, 1886; WINTER and DEMETRIO, Hedw. 24: 205, 1885; LINDAU in Rabenhorst. Krypt. Fl. 9: 102, 1910; LIENEMAN, Ann. Mo. Bot. Gard. 16: 46, 1929; SOLHEIM, Ill. Biol. Monog. 12: 41, 1929; PETRAK and CIFERINI, Ann. Myc. 30: 334, 1932; CHUFF, Monog. Univ. Puerto Rico Ser. B, 2: 252, 1934; YAMAMOTO, Jour. Soc. Trop. Agric. 6: 606, 1934.

*C. rosicola* var. *undosa* DAVIS, Trans. Wis. Acad. 20: 399-411, 1922.

*C. rosae* VAN HOOK, Indiana Acad. Sci. Trans. 38: 131-132, 1928.

*C. rosae-indianensis* VAN HOOK, Indiana Acad. Sci. Trans. 39: 75-83, 1929.

*C. rosigena* THARP, Mycol. 9: 114, 1917.

Hab. on *Rosa multiflora* THUNB. (No-ibara).

Pref. Yamanashi: Foot of Mt. Fuji, July 7, 1951; Vicinity of Motosu Lake, July 8, 1951, E. KUROSAWA.

JOHNSON and VALLEAU (l. c.) considered *C. rosigena* THARP being synonymous with *C. apii* FRES.

Grateful thanks are due to Prof. Dr. CHARLES CHUPP, Cornell University, for his valuable criticism and advice in the preparation of this paper. The junior author is specially indebted to Prof. Dr. H. YOSHII, Kyushu University, for the benefit in using the bibliography, and also to Mr. E. KUROSAWA, Tokushu Noyaku Co. Ltd., for his kind help in collecting the materials examined.
